WARD LINES

CITY OF NEW BEDFORD,

IN BOARD OF ALDERMEN,

December 23, 1914.

ORDERED, That in conformity with the Revised Laws of Massachusetts, and under authority of Chapter 676 of the Acts of the Legislature in the year 1914, the several wards of the city be and they hereby are divided and established according to the following described lines, said division and designation to take effect as prescribed by Section 4 of said Chapter 676 of 1914:

Ward One—All that portion of the city lying north and east of a line beginning at a point in the Acushnet River in the line between the City of New Bedford and the Town of Fairhaven, and drawn through the middle of Sawyer Street to the westerly line of the location of the Old Colony Railroad; thence northerly and westerly in that line and in the southerly line of the Watuppa Branch of the Old Colony Railroad to the line between the City of New Bedford and the Town of Dartmouth.

Ward Two—All that portion of the city lying between a line beginning at a point in the Acushnet River in the line between the City of New Bedford and the Town of Fairhaven and drawn through the middle of the following streets, namely:

Wamsutta, Purchase, Austin, County, Hazard, Summer, Robeson and the last named line extended to the line between the City of New Bedford and the Town of Dartmouth, and the line beginning at a point in the Acushnet River in the line between the City of New Bedford and the Town of Fairhaven and drawn through the middle of Sawyer Street to the westerly line of the location of the Old Colony Railroad; thence northerly and westerly in that line and in the southerly line of the Watuppa Branch of the Old Colony Railroad to the line between the City of New Bedford and the Town of Dartmouth.

Ward Three—All that portion of the city lying between a line beginning at a point in the Acushnet River at the line between the City of New Bedford and the Town of Fairhaven, and passing north of Popes and Fish Islands, and thence through the middle line of the following streets, namely: North, Newton, Mill and Kempton to the line between the City of New Bedford and the Town of Dartmouth, and the line beginning at a point in the Acushnet River in the line between the City of New Bedford and the Town of Fairhaven and drawn through the middle of the following streets, namely Wamsutta, Purchase, Austin, County, Hazard, Summer, Robeson, and the last named line extended to the line between the City of New Bedford and the Town of Dartmouth.

Ward Four—All that portion of the city lying between a line beginning at a point in the Acushnet River in the line between the City of New Bedford and the Town of Fairhaven, and passing south of Popes and Fish Islands, and thence through the middle of the following streets, namely: Walnut, County and Arnold, to the line between the City of New Bedford and the Town of Dartmouth, and the line beginning at a point in the Acushnet River in the line between the City of New Bedford and the Town of Fairhaven passing north of Popes and Fish Islands, and thence through the middle line of the following streets, namely North, Newton, Mill and Kempton to the line between the City of New Bedford and the Town of Dartmouth.

Ward Five—All that portion of the city lying between a line beginning at a point in the Acushnet River in the line between the City of New Bedford and the Town of Fairhaven and passing north of Palmers Island; thence through the middle of the following streets, namely: Potomska, Purchase, Thompson, Bonney and Rockland; thence westerly across the Rural Cemetery and through the middle of Winterville Road to the line between the City of New Bedford and the Town of Dartmouth, and the line beginning at a point in the Acushnet River in the line between the City of New Bedford and the Town of Fairhaven, and passing south of Popes and Fish Islands, and thence through the middle of the following streets, namely: Walnut, County and Arnold, to the line between the City of New Bedford and the Town of Dartmouth.

Ward Six—All that portion of the city lying south of a line beginning at a point in the Acushnet River in the line between the City of New Bedford and the Town of Fairhaven

and passing north of Palmers Island; thence through the middle of the following streets, namely: Potomska, Purchase, Thompson, Bonney and Rockland; thence westerly across the Rural Cemetery and through the middle of Winterville Road to the line between the City of New Bedford and the Town of Dartmouth.

In Board of Aldermen, Dec. 23, 1914. Adopted and sent down for concurrence.

In Common Council, Dec. 23, 1914. Concurred.

Presented to and approved by the Mayor, Dec. 24, 1914.

A true copy, attest:

W. H. B. REMINGTON, City Clerk.

EXTRACT FROM LAW.

Section 4 of Chapter 676 of the Acts of 1914, entitled "An Act relative to the re-division of cities into wards and voting precincts," is as follows:

Chapter 676, Acts 1914.

"Section 4. Said Chapter eight hundred and thirty-five is hereby further amended by striking out section two hundred and nineteen and inserting in place thereof the following new section: Section 219. For all elections held prior to the annual state primary in the second year following a re-division of a city into wards, and for the assessment of taxes prior to such time, the wards as existing prior to such re-division shall continue, and for such purposes the election officers shall be appointed and hold office, and voting lists shall be prepared, and all other things required by law shall be done as if no such re-division had been made. For all other purposes, the new division shall take effect on the thirty-first day of December of the year when it is made."

W. H. B. REMINGTON, City Clerk.

NEW PRECINCT LINES**1921.**

CITY OF NEW BEDFORD,

City Clerk's Office, Feb. 9, 1921.

The following order, making a division of the wards of the City of New Bedford, as established by the City Council, Dec. 24, 1914, into precincts is hereby published for the information of the inhabitants:—

W. H. B. REMINGTON,
City Clerk.

ORDER FOR DIVISION OF WARDS.

CITY OF NEW BEDFORD.

In Board of Aldermen, Feb. 9, 1921.

Ordered, That the wards of the City of New Bedford as established by the City Council of 1914, be and they hereby are divided into voting precincts, as follows:

WARD ONE.

Precinct 1A—All that part of ward 1 bounded by the following lines in sequence, viz.: Beginning at the Acushnet river and extending through the centre lines of Sawyer street, Purchase street, and Nye street to the Acushnet river.

Precinct 1B—All that part of ward 1 bounded by the following lines in sequence, viz.: Beginning at the Acushnet river and extending through the centre lines of Nye street, Purchase street, Deane street, Quansett street, Coffin avenue, Belleville avenue and Phillips avenue to the Acushnet river.

Precinct 1C—All that part of ward 1 bounded by the following lines in sequence, viz.: Beginning at the Acushnet river and extending through the centre lines of Phillips avenue, Belleville avenue, Coffin avenue, Quansett street, Deane street, the Old Colony Railroad location, Collette street, Acushnet avenue and Davis street to the Acushnet river.

Precinct 1D—All that part of ward 1 bounded by the following lines in sequence, viz.: Beginning at the Acushnet river and extending through the centre lines of Davis street, Acushnet avenue, Collette street, the Old Colony Railroad location, Hathaway street, Acushnet avenue and Tinkham street to the Acushnet river.

Precinct 1E—All that part of ward 1 bounded by the following lines in sequence, viz.: Beginning at the Acushnet river and extending through the centre lines of Tinkham street, Acushnet avenue, Hathaway street, the Old Colony Railroad location, Nash road, Bowditch street, Whitman street to the Acushnet river.

Precinct 1F—All that part of ward 1 bounded by the following lines in sequence, viz.: Beginning at the Acushnet river and extending through the centre lines of Whitman street, Bowditch street, Nash road, the Old Colony Railroad location, Belleville road, Acushnet avenue and Hatch street to the Acushnet river.

Precinct 1G—All that part of ward 1 bounded by the following lines in sequence, viz.: Beginning at the Acushnet river and extending through the centre lines of Hatch street, Acushnet avenue, Belleville road, the Old Colony Railroad location, the Watuppa Branch of the Old Colony Railroad to the line between the City of New Bedford and the town of Dartmouth, thence along said line to Plainville road and through the centre lines of Plainville road, Tarkiln Hill road, Old Colony Railroad location, Irvington street, and Hadley street to the Acushnet river.

Precinct 1H—All that part of ward 1 lying north of the following described lines, viz.: Beginning at the Acushnet river and extending through the centre lines of Hadley street, Irvington street, the Old Colony Railroad location, Tarkiln Hill road and Plainville road.

WARD TWO.

Precinct 2A—All that part of ward 2 bounded by the following lines in sequence, viz.: Beginning at the Acushnet river and extending through the centre lines of Wamsutta street, Front street, Cedar Grove street, Bowditch street and Sawyer street to the Acushnet river.

Precinct 2B—All that part of ward 2 bounded by the following lines in sequence, viz.: The centre lines of Sawyer street, Bowditch street, Cedar Grove street and Front street.

Precinct 2C—All that part of ward 2 bounded by the following lines in sequence, viz.: The centre lines of Austin street, County street, Linden street, County street and Purchase street.

Precinct 2D—All that part of ward 2 bounded by the following lines in sequence, viz.: The centre lines of Hazard

street, Summer street, Linden street, Reynolds street, the Old Colony Railroad location, County street, Linden street and County street.

Precinct 2E—All that part of ward 2 bounded by the following lines in sequence, viz.: The centre lines of Linden street, Summer street, Coggeshall street, Myrtle street, the Old Colony railroad location and Reynolds street.

Precinct 2F—All that part of ward 2 bounded by the following lines in sequence, viz.: The centre lines of Robeson street, Cedar street, Durfee street, Highland street, Hathaway road, the Old Colony railroad location, Myrtle street, Coggeshall street and Summer street.

Precinct 2G—All that part of ward 2 bounded by the following lines in sequence, viz.: The centre lines of Robeson street, and extension of Robeson street, to the line between the City of New Bedford and the town of Dartmouth, the said town line, the centre lines of Watuppa branch of Old Colony railroad, Hathaway road, Highland street, Durfee street and Cedar street.

WARD THREE.

Precinct 3A—All that part of ward 3 bounded by the following lines in sequence, viz.: Beginning at the Acushnet river and extending through the centre lines of North street, Pleasant street, Pearl street, Purchase street and Wamsutta street, to the Acushnet river.

Precinct 3B—All that part of ward 3 bounded by the following lines in sequence, viz.: The centre lines of North street, Hill street, Hillman street, State street, Willis street, State street, Pearl street, County street, Austin street, Purchase street, Pearl street and Pleasant street.

Precinct 3C—All that part of ward 3 bounded by the following lines in sequence, viz.: The centre lines of North street, Summer street, Parker street, County street, Pearl street, State street, Willis street, State street, Hillman street and Hill street.

Precinct 3D—All that part of ward 3 bounded by the following lines in sequence, viz.: The centre lines of Parker street, Richmond street, Robeson street, Summer street, Hazard street and County street.

Precinct 3E—All that part of ward 3 bounded by the following lines in sequence, viz.: The centre lines of North street, Ash street, Sycamore street, Cedar street, Parker street and Summer street.

Precinct 3F—All that part of ward 3 bounded by the following lines in sequence, viz.: The centre lines of North street, Park street, Parker street, the easterly line of Oak Grove cemetery, the centre lines of Robeson street, Richmond street, Parker street, Cedar street, Sycamore street and Ash street.

Precinct 3G—All that part of ward 3 bounded by the following lines in sequence, viz.: The centre lines of North street, Newton street, Mill street and Kempton street to the line between the City of New Bedford and the town of Dartmouth, the said town line to point in continuation of Robeson street, and thence in centre line of Robeson street to easterly line of Oak Grove cemetery, the centre lines of Parker street and Park street.

WARD FOUR.

Precinct 4A—All that part of ward 4 bounded by the following lines in sequence, viz.: Beginning at the Acushnet river and extending through the centre lines of Walnut street, Purchase street and North street to the Acushnet river.

Precinct 4B—All that part of ward 4 bounded by the following lines in sequence, viz.: The centre lines of Walnut street, County street, North street and Purchase street.

Precinct 4C—All that part of ward 4 bounded by the following lines in sequence, viz.: The centre lines of Arnold street, Lincoln street, Union street, Cottage street, Court street, Cedar street, North street and County street.

Precinct 4D—All that part of ward 4 bounded by the following lines in sequence, viz.: The centre lines of Arnold street, Chancery street, Kempton street, Park street, North street, Cedar street, Court street, Cottage street, Union street and Lincoln street.

Precinct 4E—All that part of ward 4 bounded by the following lines in sequence, viz.: The centre lines of Arnold street, Ocean street, Union street, Newton street, Court street, Liberty street, Mill street, Newton street, North street, Park street, Kempton street and Chancery street.

Precinct 4F—All that part of ward 4 bounded by the following lines in sequence, viz.: The centre lines of Arnold street, Brownell street, Court street, Florence street, Kempton street, Hunter street, Mill street, Liberty street, Court street, Newton street, Union street and Ocean street.

Precinct 4G—All that part of ward 4 bounded by the following lines in sequence, viz.: The centre line of Arnold street

to the line between the City of New Bedford and the town of Dartmouth, thence by said line, the centre lines of Kempton street, Mill street, Hunter street, Kempton street, Florence street, Court street and Brownell street.

WARD FIVE.

Precinct 5A—All that part of ward 5 bounded by the following lines in sequence, viz.: Beginning at the Acushnet river and extending through the centre lines of Potomska street, Purchase street, Thompson street, County street, Grinnell street, Acushnet avenue and Howland street to the Acushnet river.

Precinct 5B—All that part of ward 5 bounded by the following lines in sequence, viz.: The centre lines of Howland street, Acushnet avenue, Grinnell street, Sixth street and Walnut street to the Acushnet river.

Precinct 5C—All that part of ward 5 bounded by the following lines in sequence, viz.: The centre lines of Thompson street, Bonney street, Rockland street, Orchard street, Washington street, Crapo street, South street and County street.

Precinct 5D—All that part of ward 5 bounded by the following lines in sequence, viz.: The centre lines of South street, Crapo street, Washington street, Orchard street, Arnold street, County street, Walnut street, Sixth street and County street.

Precinct 5E—All that part of ward 5 bounded by the following lines in sequence, viz.: The centre lines of Rockland street, Rockland street continued, Lewis street, Grape street, Oak street, Clay street, Columbia street, Allen street and Orchard street.

Precinct 5F—All that part of ward 5 bounded by the following lines in sequence, viz.: The centre lines of Allen street, Columbia street, Clay street, Oak street, Grape street, Page street, Hawthorn street, Tremont street, Arnold street and Orchard street.

Precinct 5G—All that part of ward 5 bounded by the following lines in sequence, viz.: Beginning at the intersection of the centre line of Lewis street with the centre line of Winterville road, thence by centre line of Winterville road to the line between the City of New Bedford and the town of Dartmouth, thence by said town line to its intersection with the extension of the centre line of Arnold street, thence by centre lines of Arnold street, Tremont street, Hawthorn street, Page street, Grape street and Lewis street.

WARD SIX.

Precinct 6A—All that part of ward 6 bounded by the following lines in sequence, viz.: Beginning at the Acushnet river and extending through the centre lines of Gifford street, Water street, Division street, Acushnet avenue, Rivet street, Purchase street and Potomska street to the Acushnet river.

Precinct 6B—All that part of ward 6 bounded by the following lines in sequence, viz.: The centre lines of Division street, County street, Mosher street, Crapo street, Thompson street, Purchase street, Rivet street and Acushnet avenue.

Precinct 6C—All that part of ward 6 bounded by the following lines in sequence, viz.: The centre lines of Katherine street, Orchard street, Rivet street, Dartmouth street, Edward street, Field street, Babbitt street, thence by the easterly and southerly lines of Rural cemetery, the centre lines of Rockland street, Bonney street, Thompson street and Crapo street.

Precinct 6D—All that part of ward 6 bounded by the following lines in sequence, viz.: Beginning at the intersection of the line between the City of New Bedford and the town of Dartmouth with the shore at Clarks Cove, thence by said town line to the centre line of Winterville road, thence in centre lines of Winterville road, Rockdale avenue, Matthew street to the easterly line of Rural cemetery, the centre lines of Babbitt street, Field street, Edward street, Dartmouth street, Rivet street, Orchard street, Katherine street and Crapo street to Clark's Cove.

Precinct 6E—All that part of ward 6 bounded by the following lines in sequence, viz.: Beginning at Clarks Cove and extending through the centre lines of Crapo street, Mosher street, County street, Division street, Second street, Stapleton street, Brock avenue, Shore street and Grit street to Clarks Cove.

Precinct 6F—All that part of ward 6 bounded by the following lines in sequence, viz.: Beginning at a point in the Acushnet river and extending through the centre lines of Cove street, Viall street, Ruth street, Brock avenue and Warren street to Clarks Cove; beginning again at Clarks Cove and extending through the centre lines of Grit street, Shore street, Brock avenue, Stapleton street, Second street, Division street, Water street and Gifford street to the Acushnet river.

Precinct 6G—All that part of ward 6 bounded by the following lines in sequence, viz.: Beginning at the Acushnet

river and extending through the centre lines of David street, Brock avenue and George street to Clarks Cove; beginning again at Clarks Cove and extending through the centre lines of Warren street, Brock avenue, Ruth street, Viall street and Cove road to the Acushnet river.

Precinct 6H—All that part of ward six beginning in the Acushnet river, in line with David street; thence through the center line of David street to the center line of Brock avenue; thence through the center line of Brock avenue and the same line continued to Buzzards bay and the Acushnet river to the point of beginning. (March 22, 1922).

Precinct 6I—All that part of ward six beginning in Clarks cove, in line with George street; thence by the center line of George street to the center line of Brock avenue; thence by the center line of Brock avenue and the same line continued to Buzzards bay; thence in Buzzards bay and Clarks cove to the point of beginning. (March 22, 1922).

Second
Inaugural Address of
Hon. Walter H. B. Remington
Mayor City of New Bedford

Massachusetts

At the Inauguration of the
City Government, January Second
Nineteen Hundred and Twenty-three

THE A. E. COFFIN PRESS—PRINTERS
NEW BEDFORD, MASS.
1923

SECOND
INAUGURAL ADDRESS
OF
HON. WALTER H. B. REMINGTON

Gentlemen of the City Council:

The inauguration of this city government, which marks the beginning of biennial terms for the mayor and members of the city council, offers an opportunity which has not before existed,—the chance to establish a line of governmental policy which may not be disturbed for a period of two years. Whether or not this plan will prove advantageous to the city rests entirely with you as members of the city government.

The theory under which biennial municipal elections were adopted by the voters of New Bedford was that the annual political turmoil which has been so up-setting in the past might be eliminated. Certain it is that everybody was relieved when the disgraceful spectacle which

marked the last municipal election was ended. Vilification, vituperation, mud-slinging, malicious falsification, willful misrepresentation,—these are things which should have no place in a canvass for votes for municipal office; and yet they did, unfortunately, play a prominent part in the recent campaign.

It may be that with an interval of two years between now and the next municipal election some of the bitter personal animosities which have been permitted to become prominent in our city election campaigns may be forgotten. Be that as it may, you have two years in which to make good, and it is to be sincerely hoped that the City of New Bedford will profit by your opportunity.

THE SCHOOLS.

One of the most important problems before you, as representatives of the citizens, is what New Bedford must do for the education of its children.

We have gone through a period of unrest in our educational department during the past 12 months. The school survey made by Dr. Frank E. Spaulding, completed early in the past year, has been accepted by the school authorities as a guide, and the recommendations which the survey contained have been partially put into effect. The wisdom of generally carrying out the plan proposed by such an eminent educator has not been materially questioned and it is presumed that the newly elected school committee will, in the main, follow the course laid out. That is a matter for their determination.

It is quite certain that the erection of buildings under our direction is a matter which will engage thoughtful attention and is reasonably pressing for some action in the present year.

We possess all legislative authority sufficient to meet the costs of several important structures and when requirements are definitely ascertained, the city government is in a position to initiate such undertakings as are vitally necessary.

It is my urgent advice that care be taken that the plans finally approved and accepted shall be as economical as is consistent with suitable structures, and shall contain no items of wasteful expenditure; that the specifications shall provide for free and open competitive bidding in all respects, and that the contracts may be awarded to the responsible bidders whose proposals are most advantageous to the City of New Bedford.

The interest of the people and their insistent attitude in this regard have been made so manifest that attention to detail and watchful supervision in the most exacting degree is expected and demanded. Our most scrupulous and faithful efforts are required in this direction.

In connection with the school problem, I venture the hope that the school committee will be mindful of a situation which the experience of the past year has revealed,—that is, the desirability of a survey for the purpose of determining where school buildings should be erected, in the future, that they may fit, and not misfit, the school system.

The location of schoolhouses to fit a school system is a scientific problem and not a matter of hit or miss. With a growing city, like New Bedford, it should not be a question of chance where the next new schoolhouse is to be built. The fact that Smith or Jones is the owner of a tract of land large enough to hold a school building should not be the reason why the next schoolhouse is located on that particular spot. There are educational experts who make it a business to consider situations and to determine schoolhouse building programmes. School buildings should be located after careful analysis of population growth and population needs. Prospective locations should be selected and buildings planned with reference to the future. The ideal situation is one in which the school authorities keep their housing projects so far in advance of actual needs that short-time sessions and temporary housing do not become necessary except in times of urgent stress.

It is my opinion that much money can be saved to New Bedford if a comprehensive schoolhousing plan, covering a future of, say, ten years, can be determined after a thorough survey by a competent expert, and I suggest this course to the school committee for immediate consideration.

A CITY PLAN.

I desire to renew my recommendation of a year ago in favor of a planning board. An ordinance providing essential rules for the regulation of such a board, in accordance with law, will be submitted for your action,

and an appropriation item sufficient for the beginning of the work of such a board will be included in the budget, providing the ordinance passes.

One or two events of the past year have clearly demonstrated the need of a definite city plan. The suggested extension of Spring Street eastward from its present terminus is one instance. Spasmodic street treatment, founded on happen-so circumstances, is not the course which should be followed in a city which has reached New Bedford's size and importance. A plan based on the city's needs and the possibilities of future development, scientifically determined, should be in existence and should be followed unless there is ample reason for doing otherwise.

I feel certain that New Bedford's harbor, with its possibilities, will one day make New Bedford an important commercial port, and that commodities for the supply of a large part of New England will be transhipped through our water portals. A planning board which will give consideration to such a possibility, and will include preparation for it in the general scheme of the city's development, is what New Bedford needs.

The city's history has witnessed one complete change in New Bedford's industrial activity. When the city was established, in 1847, nobody would have believed the prophet who declared that the whaling industry would decline to almost nothing in 75 years, and be supplanted by a principal industry of entirely different character. There are those, today, who predict that

the cotton manufacturing which is now our main stay, will be removed to the south, and that we must seek new fields of enterprise if we would keep our standing in the business world.

We sincerely hope that predictions that the cotton manufacturing supremacy must depart from New England will not come true, but it will not do for us to bank our hopes alone. It is up to us to make good the reputation for shiftiness on land and sea which has been given to us, and to prepare for what may come. If we can develop our commercial possibilities through the improvement of our port and its use as a point of transshipment, no chance should be lost. Our development should be planned with that end in view, and it is time that the scheme should take tangible form and have its place on paper, in black and white, so that everybody may see it, rather than that it should remain a hazy dream in the minds of those who have the prosperous growth of New Bedford at heart.

A planning board will produce the ideal plan. After that, it is for New Bedford to live to it and grow to it as best it may. Whatever may be the outcome, the plan will furnish the line to hew to,—and those who have gone down to the sea in New Bedford's ships know full well that without the chalk-line the adz must have made a sorry mess in shaping the ship's timbers.

There are immediate possibilities which a planning board of suitable calibre can bring about. A zoning system which will warrant proper treatment in the matter

of garage locations is one of the things which such a board should study and present to the city council for action. The householder of modest means, who invests his all in a home, should be protected from the detrimental encroachment upon his peace and quiet by the builder of an adjacent commercial garage. This can be done by an intelligent zoning ordinance, and property values increased thereby. Why should not a competent planning board, appointed in accordance with the law of the Commonwealth, be given an opportunity to study the situation and produce such an ordinance for your action?

PARKING.

A late act of the outgoing city government was the passage of a traffic ordinance which I have signed with great misgiving as to its efficiency.

It contains a very objectionable feature, the placing of a time limit on parking, which in my opinion operates in the end to annoyance and is without effect in relieving congestion or promoting convenience. This is the weight of expert judgment and observation which might well have been considered and heeded by the city government. There should be no limit in time and parking should be controlled by alternation, one side of the street mornings and the other in the afternoon.

If our city center streets were through thoroughfares in which the space was needed for a continuous flow of traffic, then there should be no parking at all and

the roadway should be kept clear so that the stream of vehicles could flow along.

This is not the situation here, the streets are not particularly crowded, the center is a business frequenting resort, with small general traffic and practically no through commerce. Parking on alternate sides would relieve such conditions as exist, although I am not persuaded that we have anything here that could be called a real problem.

I hope the City Council will eventually adopt a better plan than the time limit scheme. Inasmuch as it is hardly possible to believe that a city government would be so radical as to aim a blow at business by absolutely prohibiting parking,—attention may well be given to the matter of adopting the plan of permitting parking on one side of the street only for a portion of the day and on the opposite side for a fixed time,—that is to say, morning on one side,—afternoon on the other.

For our city, parking under a time limit is not to be favored. I am quite certain this will become very apparent while the present scheme is being tried out.

MUNICIPAL CONTRACTS.

It may be a matter of mere detail,—and incidentally it may be noted that details are what count, in the long run,—but this is not an unwarrantable time nor place to call to the attention of the board of aldermen, committees, boards and heads of departments generally, the

importance of securing for the city what department specifications call for. I have in mind plans which I propose to put into effect, with the backing of the board of aldermen, for a more complete checking up of materials furnished to the street department to ensure that the city is receiving full value for every cent expended.

Specifications for all work and materials to be paid for from the city treasury should be carefully drawn, before bids are invited, and when contracts are made the contractors should be held to strict performance in accordance with specifications. There is no excuse for any other line of conduct, so far as the execution of city contracts is concerned, and it should be understood, both by contractors and city executives, that contracts are made to be lived up to.

Let that be the future rule. As I have before stated, in reference to the building contracts the public mind is aroused to an extent both creditable and impressive. We are charged with seeing to it that contracts and all their incidents are sound and honorable.

WATER SUPPLY.

The establishment of a state conducted water reserve supply district, affecting this city, was a matter which was considered by the General Court of 1922 and referred to the legislative of this new year.

It is proposed that protecting areas of the watershed of Long and Assawampsett Ponds, tributaries and other streams be acquired,—that the purity of the water

be effected and the supply used as a reserve from which New Bedford and other cities and towns can, at a future date, augment their supplies; contribution to the resulting expense to be upon the basis of population and consumption.

The project is one which, in its general features, if no entangling considerations are introduced in the bill, makes for the interest of the city and commends itself as a favorable proposition. But our efforts were directed last year and should be energetically continued now and hereafter to oppose a scheme which was urged and promoted by influences from Fall River to encroach upon our Quittacus system. It was sought to set up a pumping station in the smaller of these ponds and to draw upon the supply which is at this time just about equal to our needs. The Fall River plan would cause a reversal of the natural flow of the water and very seriously affect and interfere with the excellent conditions which at present maintain in the ponds and through the whole system.

Just what attitude the City of Fall River is now prepared to assume may be uncertain and doubtful but it is certainly most imperative that we be vigilant and watchful.

I engage to acquaint you with all the information obtainable and to recommend and indicate appropriate action as this matter comes forward.

DEPARTMENT SUGGESTIONS.

The department heads have, at my request, furnished me with suggestions, many of which may require from time to time special communications with reference to their consideration or adoption. These will be forthcoming as occasion may require. The departments of fire, police, water, parks and wires have problems and necessities which press for attention. The protective signal system needs to be extended and perfecting changes introduced. Quarters are in many instances inadequate and extensions may have to be provided.

It is likely that more buildings and stations will have to be erected and equipped upon suitable sites. In this connection, all that I have said about planning, zoning and contracts is equally pertinent and relevant.

SPENDING CITY MONEY.

There are plenty of ways in which a city government may spend money, and spend it for the benefit of the people, too. Some of those who advocate projects for public improvement seem to forget, for the time being, that there is anything besides their pet project, and that the money to pay for all improvements must come out of the people. There are certain things which must be done. The city is bound to maintain public service in the way of health, police and fire protection, the construction and upkeep of streets and ways, and water supply. We must educate our children and the children who come to us from other places, and in this item reasonable liber-

ality is true economy. We must provide, as wisely as possible, for the comfort of the citizens in the generally accepted ways. You will find, when you come to study the conditions, that the money requirements for these essential things are very considerable. And if you give the whole subject of municipal expenditure the consideration which it deserves, you will realize that some of the projects which will be advanced, although they look good on the face, cannot be afforded.

The tax burden has become oppressive to the people. National, state and county taxes have mounted as a result of the war and the conditions which have followed it. We cannot afford to crowd the already heavily burdened tax-payer too far. You must bear this in mind when you vote yes or no on orders involving expenditure. If it can be done, the tax rate,—and, better still, the tax bill,—should be reduced this year. Try to govern your action with that end in view.

DON'T PASS THE BUCK.

In conclusion, I offer you, as members of the city council, one particular bit of advice, and it is contained in the homely phrase, gambling term though it may be, "Don't pass the buck."

The tendency to pass the buck is altogether too prominent in municipal affairs, as it is in the ordinary walks of life. There seems to be a desire on the part of many charged with responsibility to shift the burden

onto the shoulders of the other fellow. If the responsibility is yours, take it! Don't push it over onto somebody else! In the course of your city government experience, you will find, perhaps, that when vexed questions confront you the easiest way out is along the line of the least resistance. If that course involves dodging the responsibility which belongs to you, I advise you to turn the other way.

You are elected by the people to perform your duties as they are set forth in the law and the ordinances. The people who voted for you expect you to stand up and be counted at the proper time. Don't shirk! Stiffen your backbone to do what you ought to do. Give the city full measure of service. You need not expect any great reward. The man who serves his city, his state or his nation must not look for any material recompense beyond the satisfaction of having done his duty to the best of his ability, and in accordance with the dictates of his conscience.

If you will so guide your course that at the end of your term you can look back upon your action as having been prompted by your conception of what was the right thing to do, the City of New Bedford will have profited by your membership in the city council.

ANNUAL REPORT

OF THE

Committee on Bath Houses

OF THE

CITY OF NEW BEDFORD

MASSACHUSETTS

For the Season Ending September 30, 1922

NEW BEDFORD, MASS.

A. E. COFFIN PRESS -PRINTERS

1923

CITY OF NEW BEDFORD.

IN BOARD OF ALDERMEN,

February 8, 1923.

Received, ordered printed in City Documents and sent
down for concurrence.

RODOLPHUS A. SWAN,

City Clerk.

IN COMMON COUNCIL,

February 8, 1923.

Concurred.

HAROLD WINSLOW,

Clerk.

The Committee on Bath Houses of 1922 hereby renders its report.

The bath houses were opened to the general public on the 11th day of June and remained open until the 17th day of September. During this time 41,753 bathers were accommodated, while it is estimated that at least 150,000 people were in attendance at the bath houses for the purpose of recreation. In all, the City was benefited to the amount of \$2837.95 from receipts for the rental of bath houses, bathing suits and towels. The number of bathers this year did not total as high as in several years past due to the fact that during the ninety-three days the bath houses were open, thirty-seven of them were rainy. It was unfortunate that many of these rainy days fell on Saturdays and Sundays when the greatest number of bathers usually patronize the bath houses.

The Committee on Bath Houses takes much credit to itself for having accomplished a recommendation made by a number of the Committees of past years, namely, the construction of a permanent sun-shelter over the boardwalk from the administration building south. This improvement has proven of the greatest benefit to many hundreds of spectators, principal among them being women who brought their children to the beach where they could play in the sand and enjoy the bathing, while the mothers enjoyed the cooling breezes from the shaded section of the board-walk.

The Committee also believes that it has accomplished much in ripping out the old lockers in the room assigned to boys and replacing these lockers with the modern box system of checking, thereby, making this room, formerly a dark, dreary hole, well lighted, sanitary and attractive to the many hundreds of youngsters who patronize the beach. The Committee also placed shower-baths for the boys and sanitariums in this room.

These improvements, together with other minor ones, such as the construction of a rest room for women in the ad-

ministration building cost the City \$3000.00, but the Committee feels that the money was well expended in view of the convenience and comfort to the large number of people patronizing the Municipal Bath Houses.

It seems fitting to state here that the Committee of 1922 carried out every improvement recommended by the Committee of 1921 with the exception of putting through an ordinance to the effect that all money accruing from the rental of bath houses, bathing suits and towels and the refreshment privilege be diverted from the account, Unappropriated Funds, to the account, Bath House Committee. The Committee attempted such an ordinance but it failed to be passed to be ordained by the City Council.

At an expenditure of \$2000.00, the Committee this year purchased 1000 additional bathing suits for the men and boys, there being 800 of the former and 200 of the latter. The Committee prides itself on the fact that the suits purchased were of the finest quality and the most modern pattern. These suits have proven very popular among all bathers this year. The Superintendent and his assistants deserve credit for their supervision of these suits, to which is due the fact that few or any of these suits have been stolen. The Committee is leaving an adequate supply of suits and towels, in its opinion, for the year 1923.

At the close of the bathing season the Committee gave deep consideration to the project of the employment of a caretaker during the winter months. It was decided that money could be saved by retaining a permanent caretaker and Mr. Henry J. Arkison, who has rendered capable and efficient service as superintendent during the bathing season, was retained as permanent caretaker, his salary being set at \$30.00 during the months in which the bathing houses were closed.

PUBLIC BATH HOUSES

5 c

During the season the following employees were in attendance at the bath houses at the weekly salaries set against their names :

Henry Arkison, Supt.....	\$35.00
Arthur Wooley,	
Attendant	33.25
Michael J. Malone,	
Attendant	28.00
John Coyne, Attendant.....	28.00
Patrick J. Gibson,	
Attendant	28.00
Hamilton Norwood,	
Attendant	28.00
John Adams, Watchman.....	28.00
Leo T. Meekin, Attendant.....	28.00
Mose Dalton,	
Reserve Officer	28.00
Rock C. Matthieu,	
Life Guard.....	31.50
Joseph Olivier,	
Life Guard.....	31.50
Peter Welch, Life Guard.....	31.50
Stanislaus Cocker,	
Cashier,	28.00
Mrs. Katharine Taber,	
Cashier,	21.00
Mrs. Annie Knowles,	
Attendant,	21.00
Mrs. Agnes Hynes,	
Attendant,	21.00
Mrs. Mary LeClair,	
Attendant,	21.00
Mrs. Jane Chapman,	
Attendant,	21.00
Mrs. Mary Kelly,	
Attendant,	21.00
Total.....	<u>\$512.75</u>

The Committee desires to state that the service rendered by the above attendants was satisfactory to both the patrons of the bath houses and to the members of the Committee.

During the year the Committee spent \$15,415.25, the largest item of which was for salaries, which aggregated \$8,405.75. \$3000.00 was spent for permanent improvements including the sun-shelter, repairs to the boys' locker room, etc. \$2000.00 was spent for the purchase of bathing suits and towels; \$453.75 was the cost of the laundry. The remaining \$1554.75 being for incidental expenses covering the entire

year and including the expense of preparing the bath houses for the opening of the season and closing them for the winter months.

An additional receipt was turned into the City for the sale of the refreshment privilege at the bath houses for the season of 1922, this amounted to \$400.00, the privilege being awarded on the highest bid to Wilfred and Jeannette Radcliffe, who have given excellent service to the patrons of the bath houses, during the season they occupied the refreshment booth on the wharf.

The superintendent's report for the season with recommendations follows:

Total number of bathers for season	41,753
Total Receipts for season	\$2,837.95
Number of persons rescued by Life Guards.....	15
Fatal Accidents	1
Number of Persons treated in First-aid Room.....	49
Cuts washed and dressed	32
Treated for cramps	4
Fainted and revived	8
Splinters removed	5
Number of suits on hand at close of season,	1138
Men and boys'	960
Women's	178
Towels on hand	630

Necessary repairs:

Painting walls in boys' and girls' locker rooms.
 Repair, paint and number boxes in main building.
 Repair and paint settees.
 Repair lockers in girls' room.
 Repair and paint life-guard boats.
 Bathing houses should be oiled inside and out.
 Clean rafts and paint or tar same.
 Board-walk in very bad condition.
 Paint outside of administration building.

Supplies needed:

150 feet of $\frac{3}{4}$ inch rubber hose.
 2,000 rubber neck bands for brass checks.
 2 - 50 ft. lengths of $2\frac{1}{2}$ inch fire hose.
 500 new towels.
 1 new flag for flag pole.
 1 new boat for life guards.

In closing this report the Committee respectfully recommends to the Committee on Bath Houses for the season of 1923 that they give serious consideration to the following recommendations of this Committee.

1st—Remove refreshment booth from the wharf to the land at the southern extremity of the bath houses. Fill in and level, and if possible sod, the top of the wharf, making it a beauty spot for those who desire to watch the bathers.

2nd—Have a washbowl and running water installed in the first-aid room in the administration building.

3rd—Take action towards the building of a breakwater, or find some other method to catch and hold the sand on the bathing beach.

4th—Equip the administration building with suitable fire hose long enough to be effective in the event of a fire in any part of the buildings.

5th—Purchase at least one, possibly two new boats for the use of the life guards.

6th—Paint the exterior of the administration building.

7th—Have the boardwalk completely gone over, remove rotted planking and replace it with new boards.

The Committee urges its successor to purchase and have installed in the administration building a lung-motor and to encourage the employees to study first-aid treatment and the scientific use of the lung-motor. Mr. James K. Donaghy, physical director in the employ of the school department, has offered to instruct the employees of 1923 in first-aid treatment free of charge. The Committee believe Mr. Donaghy's offer should be taken advantage of.

The reason for making this recommendation is that for the first time in the history of the bath houses a drowning

accident took place at the bathing beach this season. In all fairness to the life guards and the assistants, the committee absolves them one and all from any blame in this matter and points with pride to the fact that fifteen persons were rescued during the season by the life guards and forty-nine people were treated for cuts, cramps, etc., in the first aid room of the bath houses. In view of the increasing number of accidents, the committee feels, however, that the majority of attendants at least should be well versed in scientific first-aid treatment and the use of the lung-motor.

During the fall and winter months one of the Committee's recommendations, namely the painting of the exterior of the administration building was carried out; the caretaker, Mr. Arkison, doing the entire work without assistance.

For the Committee,

Respectfully submitted,

JOHN CATTERALL,

Chairman.

REPORT OF THE Superintendent of Buildings

OFFICE OF SUPERINTENDENT OF BUILDINGS,

NEW BEDFORD, MASS., DEC. 31, 1922.

To His Honor the Mayor and the City Council:

Gentlemen:—I have the honor to submit this report on the condition of public buildings under construction December 31, 1921, also the work performed under supervision of this Department to and including December 31, 1922.

MT. PLEASANT SCHOOL.

On the 29th day of June the Committee on City Property formerly accepted this schoolhouse from the contractors as completed and immediately turned it over to the School Department. A detailed description of this building was given in my report of 1921. The cost of the building follows:

Cost of land, 674.85 rods.....	\$ 52,803.10
Cost of construction, including heating, plumbing and electrical work.....	658,356.00
Architects' fees, 1¾% (partly duplicating another school).....	11,521.23
Cost of heating building during construction....	1,278.40

Total cost of land and building.....\$723,958.73

General contractors, J. W. Bishop Company.

Heating installed by Power Heating and Ventilating Company, Boston.

Plumbing, Jeremiah Coholan, New Bedford.

Electrical work, Robbins Electrical Company, New Bedford.

Architects, Labrode & Bullard, New Bedford.

CHARLES S. ASHLEY SCHOOL.

(Ashley Boulevard and Rochambeau Street.)

On the 29th day of June this new school building was completed and accepted from the contractors by the Committee on City Property and turned over to the School Department the same day. A detailed description of the building was given in my report of 1921. The cost of the building is as follows:

Cost of land—part of City's park system taken and private land purchased for \$14,762.10— the entire lot containing 606.89 rods.....	\$ 14,762.10
Cost of construction, including heating and ven- tilating, plumbing and electrical work.....	668,278.00
Architects' fees, 1¾% (partly duplicating an- other school).....	11,694.88
Cost of heating building during construction...	1,278.40
	<hr/>
	\$696,014.38

General contractor, J. W. Bishop Company.

Heating installed by Power Heating and Ventilating
Company, Boston.

Plumbing by Jeremiah Coholan, New Bedford.

Electrical work by Robbins Electrical Company, New
Bedford.

Architects, Labrode & Bullard, New Bedford.

The building is an exact duplicate of the Mt. Pleasant
school.

CLARENCE A. COOK SCHOOL.

(On site of former old High School—Summer and North
Streets.)

This building was completed and accepted by the Committee on City Property August 24th, and turned over to the custody of the School Department same day and date. A description of this building was given in my last year's

report. The cost of the building is as follows:

Contract for construction including heating and ventilating, plumbing and electrical work.....	\$566,331.00
Architect's fees	10,162.24
Heating building during construction.....	1,337.84
	<hr/>
Total cost of building.....	\$577,830.84

General contractor, J. W. Bishop Company.

Heating installed by the M. A. Dame & Son Company, Lynn, Mass.

Plumbing by Jeremiah Coholan, New Bedford.

Electrical work by Connor Electrical Company, Boston.

Architect, Nat C. Smith, New Bedford.

PUBLIC SANITARY.

In the early summer the Committee on City Property ordered plans prepared by Labrode & Bullard, architects, for a public sanitary for both men and women to be located in the basement at the northeast corner of the Municipal Building.

Competitive bids were called for by the Committee and on the 11th day of September a contract was awarded to the J. W. Bishop Company, the lowest bidder for the sum of \$37,480.00, which sum includes heating, plumbing and electrical work.

The progress of the work has been hindered by the winter weather but is expected to be completed not later than April 1st.

The heating and plumbing is to be installed by Wood, Brightman & Co., and the electrical work by Howarth & Co., both of this city.

BUTTONWOOD PARK—BARN AND WAGON SHED.

From plans and specifications prepared by Labrode & Bullard, architects, a contract was awarded in the month of August by the Park Board to Charles O. Brightman, the lowest bidder, for the erection of a large park barn and wagon shed at Buttonwood Park.

The contract was carried out under supervision of this department and was completed and accepted by the Board in the month of November. The total cost of the work was\$4,547.00

NEW PORTABLE SCHOOLHOUSE.

In the month of October bids were obtained by the School Board for a portable school building similar in design to those now in use to be located on the Betsey B. Winslow school lot corner Allen and Brownell streets.

The contract was awarded to the lowest bidder, the E. F. Hodgson Company, of Boston, for the erection and furnishing of the same, including the hot air furnace, for the sum of\$3,441.55

MEN'S DORMITORY AT ALMSHOUSE.

From plans and specifications prepared by this department for the alteration of the first story of the men's dormitory building for additional sleeping quarters a contract was awarded to Olson & Appleby, the lowest bidders for the work for the sum of \$8,094.00.

Delay in completing this work was caused by the railroad embargo on the shipment of slate partitions and other material necessary to the work which has now arrived and being installed. The building is now being used in part and is expected to be finished complete not later than February 1st. The new arrangement will give sleeping accommodations to forty more men.

WILLIS STREET POLICE STATION ALTERATIONS.

The old Willis street Police Station, one of our oldest city buildings was turned over to the Committee on City Property by the Police Department early in the year, they having no further use for the building.

The Committee immediately ordered plans and specifications prepared by this department for alterations to the same for purpose of headquarters for the Spanish-American War Veterans.

Competitive bids were called for and a contract awarded to Olson & Appleby, the lowest bidders, for the sum of \$3,060.00. The entire work was completed and accepted by the Committee early in December and the building turned over to the custody of the War Veterans.

The building is also fitted to be used as a ward room during election times.

PAINTING VARIOUS CITY BUILDINGS.

In the month of June a contract was awarded to the C. S. Oakes Company, of Providence, R. I., the lowest bidders for interior painting of the following city buildings: Municipal building, Library building, South End Police Station, and West End Branch Library.

This work was performed very satisfactory and was completed and accepted by the Committee on City Property September 30th.

The total amount of the contract was.....\$8,481.00

PUBLIC BATHHOUSES—IMPROVEMENTS.

Extensive improvements were made to the public bathhouses before the opening of the season in the month of June. The work consisted of erecting new sun shelter over the pier, building additional box rafts, additional shower

baths in boy's section, new counter, changing partitions and installing 800 additional wooden clothes boxes. Plans and specifications for this work was prepared by this department.

The contract was performed by William Young, the lowest bidder, for the sum of.....\$2,748.00

MUNICIPAL BUILDING—COVERING STEAM MAINS.

From specifications prepared by this department all steam mains and boilers in the basement of the municipal building were covered with asbestos sheeting and openings cut through outside basement walls where blower fans were installed to relieve the oppressive heat during the summer months that has existed in the Board of Assessors' offices since the erection of the building which offices are located directly over the boiler room.

The work was performed during the month of August by James N. Conway, heating contractor of this city, the result giving immediate relief to the offices named and was greatly appreciated by those employed there. The total cost of this work was.....\$3,406.87

SCHEDULE OF ALTERATIONS AND REPAIRS
MADE TO CITY BUILDINGS DURING THE
YEAR:

Municipal building—alterations for public sanitary	\$ 37,480.00
Municipal building—alterations and covering steam mains	5,068.26
Painting Municipal building, Library, Central Police Station and Branch Library.....	8,481.00
Almshouse—alterations for men's dormitory...	8,094.00
Buttonwood Park—new barn and wagon shed..	4,547.00
Willis Street Police Station—alterations for War veterans	3,060.00
School Department—portable school—Winslow school lot	3,441.55
Bathing houses—new sun shelter and general repairs	2,842.10
New horse shed for Battery D.....	1,137.00
Range house repairs.....	840.00
City Pier—concrete cap log.....	800.00
Almshouse—repairs to pest house.....	640.04
Fire station No. 8—repairs.....	541.95
Veteran Fireman's building— general repairs..	487.00
Almshouse — plumbing.....	331.71
Central Police Station—alterations for Sealer of Weights	315.95
City Pier—carpentry repairs.....	244.56

1919	762	7,005,420	269	396
1920	683	5,943,414	193	274
1921	882	5,816,631	359	506
1922	1216	7,057,240	544	880
	<hr/> 21,538	<hr/> \$86,354,310	<hr/> 8,646	<hr/> 18,461

A total of \$7,057,240 was expended for new construction of the city of New Bedford during the year 1922, the largest expenditure for construction work in the history of the city. The next largest year was in 1910 when \$7,0337,-337. was expended. The increase in 1922 was \$1,240,609. The number of building permits granted for construction work in the city in 1922 was 1,216, the largest since the year 1913, when 1,245 building permits were granted.

The building figures for the year 1922 are all the more significant in view of the fact that more than half of the total expenditures was for dwelling house construction while in the year 1910 there was a large volume of industrial construction. The year 1910 was big boom year, when in addition to the industrial construction there were erected 639 dwellings, as compared with 544 erected in 1922. There were added in 1922 880 new tenements, 374 more than in 1921 and the greatest number added in the last ten years.

Another significant item of construction during the year 1922 was the large number of garages erected, 477 of them as compared with 352 in 1921. The cost of garage construction in 1922 was \$643,740. Of the 544 new dwelling houses added in 1922, 320 of them were of the two-family type and 216 were of the one-family or cottage type. There were six three-family houses erected in 1922, while in the year 1910 this was the predominating type of house more of this type being built than all the others combined. There were 359 dwellings added in 1921.

Ward one as usual, leads in the number of new dwellings erected. There were 268 erected in that ward as compared with ward six, where 125 houses have been added. In ward four there have been 65 added, while in ward five 50 have been added.

The largest single new construction job in 1922 was the \$350,000 addition to the power plant of the New Bedford Gas & Edison Light Company while the next largest was the

\$250,000 theatre for Barney Zeitz. There has been comparatively only a small amount of industrial building during the year. There follows a summary of the most prominent permits granted during the course of the year:

January—S. S. Kresge Company, alterations for 5 and 10 cent store, on Purchase street.

February—Greene's service station, Kempton and Ash streets; rebuilding Washington Club after the fire.

March—St. Anthony's church convent on Bullard street.

April—Nausett cotton warehouse on Nausett street; Dr. Mary W. Walker apartment house, Union and Eighth streets.

May—New Bedford Gas & Edison Light Company, addition to power plant; Zeitz Theatre and business block, Purchase and Spring streets; new rectory, St. Joseph's parish, Duncan street; McQuillan apartment house, Cottage street.

July—New Bedford Boiler & Machine Company, warehouse, Water and Commercial streets; New Bedford Textile School addition, Maxfield street; Abramson's business block South Water street.

August—St. Andrew's Church, Belleville road; X-Ray building, Sassaquin; Baylies Square Theatre, Baylies square; Andrews apartment house, Cottage street; Margeson's business block, Purchase and Hillman streets.

September—Liss's business block, County and Union streets; Magnant furniture warehouse, Acushnet avenue, north of Tinkham.

October—Greene's service station No. 2, Kempton and Ash streets; New Bedford Institution for Savings, addition to bank building.

November—Hathaway Manufacturing Company, additions and alterations; St. Joseph's parish, new parish school, Duncan street.

December—St. Luke's hospital, additions and alterations.

REPORT OF CEMETERY COMMISSIONERS.

For the past few years, the appropriations to this department have been sufficient only for the general up-keep of the several cemeteries, with but little surplus to admit of much development and improvement. The high cost of labor and material were chiefly the cause of this and led to confining the work of this department to its actual needs.

During the past year, through the solicitation of the Board and the wisdom of the City Council, a larger appropriation was placed to the credit of the department, which has enabled the Board not only to meet the general maintenance demands, but to make a marked progress in some of the development and improvement in the several grounds, particularly in Pine Grove Cemetery, where the principal activities of this department have centered.

At Pine Grove Cemetery, the main avenue leading from the entrance at Ashley Boulevard has been completed across the eastern section of this cemetery. It is a beautiful winding avenue giving access to a large area of the newer section of these grounds and intersecting with the finished avenue leading from the entrance from Acushnet avenue, and connecting with those of the older sections of these grounds.

At the opening of the season, work was rushed to complete the section set aside for the use of the World War veterans, the Spanish War veterans, and their widows and orphans. All available help were pressed into this work with the result that the Board were pleased to announce the entire section was so far completed that the veterans were able to dedicate this spot to the purpose for which it was

designed, and to make their first burials on Memorial Day. An attractive, artificial pond, with a grass border, has been constructed in the center. It has a paved basin of five feet which prevents the water from washing its banks. The pond is supplied from a natural stream leading in from the north and is so controlled by gates and outlets that the water can be maintained at an average depth throughout the year.

A sixty-five foot flag pole has been erected near the center of this plot. One section of the plot is designated for the use of the Spanish War veterans and the other for the World War veterans. The center is an open space where services by either organization, or both, can be held.

The section has been graded and seeded and will present one of the attractive features in this cemetery.

For several seasons, the Board have advocated the construction of a tool house and storage building for these grounds, and as this building was desired for a permanent structure, it was deemed inadvisable to undertake its construction with the limited funds available in previous years, but with additional funds supplied by the City Council, the Board have undertaken the construction of one of the most attractive buildings designed for this purpose and when finished and its approaches and surroundings embellished, the Board feel confident that all who have interest in this cemetery will feel that it not only meets the requirement in these grounds, but is an embellishment of marked distinction in the development of this new cemetery.

The dimensions of this building are 40 ft. 8 inches by 28 feet, with a rear extension of 31 feet by 26. It is being constructed of field stone taken from our own grounds, and the work is being done by our employes, under the supervision of the Superintendent, who has had long experience in building construction before his connection with the cemeteries.

The capacity of the building is as follows:—on the main floor, there are office apartments, stock room for tools, storage for brick, lime and cement, and racks for grave frames and lowering devices, and spaces for the larger field tools. Lockers for the employes are also supplied on this floor.

At the south entrance of this building are public toilets for both men and women, back of these are the boiler room and coal bins. The rest of the rear extension will be used for the housing of the road roller, with entrance from the north.

The second floor will be utilized for a repair shop and storage for fountain covers, stone covers and for lawn mowers and other tools not in use in the winter season, also storage for lumber, as a small supply is necessary to carry at all times.

The trimming of the building is finished with specially dressed coping overhanging the main structure.

In Rural Cemetery, the season's work has progressed with its usual activity. Thirty men have been employed in these grounds.

A contract was placed with the Anchor Post Iron Works Company, of Boston, for a 6 ft. chain link woven steel fence of No. 6 wire to form the south enclosure of these grounds which border on Matthew street. This fence is built on a solid cement base of our own construction and presents a neat and attractive enclosure and a great protection from trespass in this section of the cemetery.

A new seventy foot flag pole has been erected on the Soldiers' and Sailors' lot.

Under the direction of the foreman, Mr. Lasell, the cemetery has maintained its usual attractiveness. In this cemetery are several areas temporarily reserved for embell-

ishment. The application of valuable land to the sole cause of beauty conveys more emphatically than language the unfaltering idealism which governs these sacred grounds. The labor and cost involved in the upkeep of these decorative areas, supplied from our own greenhouses and nursery, the mowing of uncared for lots from five to seven times a year—these, and many other expenditures in connection with this special feature, speak eloquently of the spirit of those interested in the work and the standard of a city which makes it possible.

In Oak Grove Cemetery, the general maintenance and upkeep of these grounds have been well in hand under the direction of the sexton, Mr. Edmund Cornell. While no further development is possible in these grounds, there is a necessity for the employment of sufficient help to care for its maintenance and to provide for the annual and perpetual care of lots, the daily interments and general repair work.

Two new motor mowers have been purchased this season, and the operation of these largely facilitates the work in cutting the grass on the lawn sections of the several grounds.

One new dump truck has also been purchased and the acquisition of this equipment fills a long felt want in the service of the department.

The greenhouses located in this cemetery, under the management of Mr. Samuel S. Peckham, have contributed to all the cemeteries a wonderful supply of plants of perennial growth.

One hundred flower beds have embellished the grounds, several of which are of special design and reflect much credit on the gardener's artistic ability. More than ninety thousand plants were used in the season's planting, beside special setting of palms, ferns, dracaenas and other specimen plants around the artificial ponds in these grounds.

The growing popularity of "Perpetual Care" by purchase of lots is very gratifying to this Board, one hundred additional lots being so placed this year, 2,269 now being the number in perpetual care in the several cemeteries. The total sum now on deposit is \$294,620.70, the interest of which, however, is only available for the benefit of individual lots. None can be used in the cemeteries at large.

For further operation of this department, reference is made to the Superintendent's report to the Board, which records the season's work more in detail and a copy of which is attached to this report.

The Board desire to express their full appreciation to His Honor, the Mayor, and to the City Council, who by their visits to the several grounds and their inspection of the progress of the work keep in touch with the operation of this department.

Respectfully submitted,

Board of Cemetery Commissioners,
WM. M. HIGHAM, *Chairman*.
JOHN G. NICHOLSON,
CHARLES H. VINAL, *Secretary*.

SUPERINTENDENT'S REPORT.

To the Board of Cemetery Commissioners :

Gentlemen :—I herewith present to you my third annual report of work accomplished in the city's several cemeteries under my supervision during the past year, together with such recommendations as appear necessary and pertinent.

The season has been an active one. While the maintenance of this ever growing city of the dead is of an expansive nature, each year special work designed by the Board was hoped to be accomplished.

The rainfall throughout the season was unusually heavy, causing a continuous and rapid growth of grass, necessitating frequent cutting, and at periods of the year nearly one hundred employes were engaged in the work of this department.

The city has now 3,694 lots in perpetual and annual care which is a special work of itself. The expense, however, is met from outside sources and therefore is no burden on the City Treasury. \$73,604.28 of the receipts of this department was spent for labor alone.

In Oak Grove Cemetery, the Smith street frontage fence has been painted. The east and west boundary fence of the older part of this cemetery should be rebuilt and painted. This would incur an expense estimated at \$1,400.00.

The tool house in Rural Cemetery must be resingled the coming season as it is leaking badly.

The opening of new sections in Rural Cemetery calls for an extension of the water supply, as a number of requests from lot owners have been made and complaints of the long distance water has to be carried from its present terminal to the lots.

These grounds have been policed by a reserve officer of the Police Department daily from five o'clock P. M. to eleven at night, and I am pleased to report that fewer thefts of flowers and other vandalism from which these grounds have suffered have occurred.

The fence around the Griffin street Cemetery has been painted this year. It is, however, in a decaying condition and I would recommend that it be replaced by a new fence of wire construction as soon as the Board find it possible to build it.

Three large flower beds have been maintained through the season, the grass regularly cut. An employe of the department has been regularly stationed at these grounds as watchman and caretaker.

Approximately one thousand sunken graves have been re-fitted and sodded thus removing this unsightly feature from many lots. This improvement is largely the result of a circular letter sent from the office, notifying lot owners of this condition and a gratifying response was received from them, directing the work to be done and paying for the same.

Activities of this department have been most pronounced in Pine Grove Cemetery. The broad avenue, leading from Ashley Boulevard, has been finished. The large plot set aside for the World War and Spanish American War veterans has been finished, graded and seeded. The artificial pond has been finished and flooded.

Four catch basins have been built to take care of the

surface water and 672 feet of 10 inch and 8 inch pipe have been laid, the depth of a grave (four feet).

I would recommend that 250 feet of 20-inch drain be laid to provide for the flow of water which supplies the pond. This would remove the unsightly wash which the brook now presents.

Provision should be made the coming season for the construction of an avenue from the entrance at Ashley Boulevard south, thus supplying an approach to Section 14, which is continually being used for burials on public ground, and at present the undertakers are obliged to carry bodies from the main entrance by hand to make their interments as there is no finished driveway to this section.

The Board have been in close touch with the construction of the new tool house and storage building in these grounds and are fully acquainted with what has been accomplished in this permanent improvement.

Two hundred feet of double face wall have been constructed along the east line of this cemetery. It was deemed advisable to make this enclosure of solid construction as the land between the cemetery and Acushnet avenue is rapidly being built upon for resident purposes and a permanent and substantial construction of this character should be maintained. I would recommend that this construction be continued as far south as the new tool house building, a distance of six hundred feet.

In constructing the new south avenue, one thousand feet of 8-inch drain should be laid at the same time, with the necessary catch basins to take care of the surface water in this section of the grounds.

The north end of Section 12 should be graded, and water extensions made to Sections 11, 12 and 13.

A new single grave section should be provided next season as the present section is being rapidly filled.

The inadequate tomb quarters question in Pine Grove Cemetery is still unsettled. We depend on Rural and Oak Grove Cemeteries for this service. I trust that provision can soon be made for a new tomb in these grounds.

The following summary of work accomplished by this department in the several cemeteries has received my supervision.

Respectfully submitted,

SIDNEY B. DEMORANVILLE,

Superintendent of Cemeteries.

PERPETUAL CARE.

The feature of perpetual care is being generally accepted by the public as the only proper method to insure the care and protection of their lot for all time.

The sums deposited by lot owners with the City Treasurer for this purpose are required by statutes to be deposited in the Savings Banks of the Commonwealth, and the interest only is available, which interest is and will be applied for no other use than for the care and repair and preservation of the particular lot for which it is assigned, and for the labor and supervision of the same for all future time. It takes the burden of this care from the lot owner and places it where it belongs.

One hundred additional lots were placed in perpetual care this year and there has been deposited for this care \$14,555.00, making the total amount now standing to the perpetual care of lots \$294,620.70, distributed in the several cemeteries as follows:

Rural	1134	\$152,915.62

REPORT OF CARETAKER OF SOLDIERS' AND SAILORS' GRAVES.

New Bedford, Mass., Dec. 1, 1922.

To the Honorable City Council of the City of New Bedford:

Gentlemen:—I herewith submit the following report of the work done on neglected Soldiers' and Sailors' graves in the several cemeteries in the City of New Bedford as authorized in Chapter 122, Acts of Legislature 1914:—

	Grass cut on graves	Graves fitted	Stone fitted
Rural Cemetery and Friends.....	117	16	1
Oak Grove Cemetery.....	155	3	
St. Mary's Cemetery.....	124	7	
Pine Grove Cemetery.....	16		
St. John's Cemetery	1		
Peckham West Cemetery.....	25	1	
Sacred Heart Cemetery.....	14		
Congregational Church Cemetery.....	2		
	454	27	1

The amount appropriated for this work was \$500.00, and of this amount \$482.25 was expended for labor, leaving a balance of \$17.75.

Respectfully submitted,

SIDNEY B. DEMORANVILLE,

Caretaker of Soldiers' and Sailors' Graves.

CITY OF NEW BEDFORD.

IN BOARD OF ALDERMEN,

Jan. 25, 1923.

Received, ordered printed in the City Documents and
sent down for concurrence.

RODOLPHUS A. SWAN,
City Clerk.

IN COMMON COUNCIL,

Jan. 25, 1923.

Concurred,

HAROLD WINSLOW,
Clerk.

CITY OF NEW BEDFORD,
April 21, 1923.

To the City Council Committee on Finance:

Gentlemen:—The sub-committee on the valuation of city property reports herewith a list of city property and its value. The valuation of real estate has been secured from the Board of Assessors, and the valuation of other property has been secured from the officers in charge of the several departments. The entire valuation is believed by your sub-committee to be a fair valuation of the city property.

JOHN CATTERALL,
ROBERT A. BARTLETT,
PERCY A. WOODLAND,
Committee.

CERTIFICATES.

I certify that I have examined the deposits and securities representing the investments of the sinking funds of the City of New Bedford and the several school and library funds in the custody of the commissioners, trustees and treasurer, and find that the same agreed with the reports for the financial year 1922, rendered by said commissioners, trustees and treasurer, to the City Council.

CHARLES J. MCGURK,
City Auditor.

We certify that we have examined the foregoing report and statements of the City Auditor and believe the same to be correct.

GEORGE S. TABER,
HENRY S. WINSLOW,
ROBERT S. BARTLETT.

Sub-committee of the joint standing committee on finance, appointed to examine the books and accounts of the City Treasurer and City Auditor.

The foregoing report and statements of the City Auditor are approved.

GEO. S. TABER,
GEORGE A. BLAKE,
HENRY BOLTON,
PERCY A. WOODLAND,
JOSEPH JASON,
Committee on Audit.

REPORT OF THE Commissioners of the Sinking Funds

City of New Bedford,

December 1, 1922.

To the City Council of the City of New Bedford, Mass.

Gentlemen: — At a meeting of the Commissioners of the Sinking Funds of the City of New Bedford, held at this date, it was

Voted: — To adopt the foregoing statement of the Treasurer of the Sinking Funds as the report of the Commissioners of the Sinking Funds of the City of New Bedford, required by the Statutes of the Commonwealth of Massachusetts to be made annually to the City Council.

BENJ. A. TRIPP,
H. C. ROBINSON,
CHAS S. KELLEY, JR.,
Commissoners of the Sinking Funds.

Thirtieth Annual Report

OF THE

ENGINEERING DEPARTMENT

CITY OF NEW BEDFORD

BY THE

CITY ENGINEER

For the Year 1922.

ENGINEER'S REPORT

City of New Bedford,
Engineering Department,
January 1, 1923.

To the City Council of the City of New Bedford:

Gentlemen:—In compliance with section 56 of the city ordinances, defining the duties of the City Engineer, I respectfully submit the following report of the expenses and operations of the Engineering Department for the year ending November 30, 1922.

EXPENDITURES

Salaries and payrolls	\$37,857.96	
Boundstones	53.00	
Telephone	32.95	
Local Transportation	5,643.22	
Drawing supplies	242.95	
Blueprint materials	380.10	
Printing, stationery, advertising, etc.	446.54	
Sundry supplies	159.55	
Office furniture and repairs	269.69	
Platting system expenses	167.41	
General instruments for office and field	525.63	
Traveling expenses, express, postage, etc....	309.64	
Printing annual report	68.00	
Public statutes and reference books	73.06	
Meteorological instruments	44.84	
Plans and photographs—Pleasant Street widening	60.15	
Labor not in payroll	89.45	
		<hr/> \$46,424.14

RECEIPTS

Appropriation, regular	\$46,000.00	
Transfer to balance	424.14	
		<hr/> \$46,424.14

EXPENDITURES

Gross	\$46,424.14
-------------	-------------

RECEIPTS

Credit from sale of blueprints, material and.. maps	\$144.00	
Net expenditures	\$46,280.14	
		<hr/> \$46,424.14

The duties and organization of this department were very fully set forth in the annual report for 1921 to which reference can be made for this information.

The following total gives a fairly accurate proportioning of the cost of work done for the various departments of the city based on the time expended.

The administration costs, transportation, and bills for materials cannot be accurately apportioned but will follow fairly closely the ratio of labor costs as given in the table.

CLASSIFICATION OF WORK.

		Per cent.
Engineering Department	\$14,975.69*	
Intercepting Sewer	1,751.42	46.20
Harbor Construction	762.46	
Street Department, Sewer Construction	873.83	18.26
Street Department, Street Construction	6,036.98	
Assessors	3,265.81	8.63
City Government and Committees	5,437.52	14.36
Inspector of Buildings	1,859.05	4.91
Water Works	1,205.20	3.18
Public Service Corporations	83.42	.22
Park Department	114.25	.30
School Department	132.55	.35
Cemetery Department	371.44	.98
Inspector of Wires	409.02	1.08
Police Department	159.32	.42
Fire Department	55.29	.15
Health Department	56.38	.15
Superintendent of Buildings	131.83	.35
City Clerk	115.09	.30
City Solicitor	23.17	.06
Forestry Department	38.24	.10
	<hr/> \$37,857.96	

*Includes administration, \$3,905.12

STREETS.

For several years it has been the practice of this office to make a careful study of our street plan for recommendations to the Board of Aldermen in order that as much as possible of the money available for street construction might be devoted to the building of a consistent system of continuous through streets. By following a carefully arranged

building plan, New Bedford now has a system of main streets so complete that one can travel to any section of the city on first class street surfaces.

This condition was very favorably commented upon by many delegates from other cities who attended the various conventions held here last summer.

There has, however, been much building of residential property during the last two years, necessitating the constant opening of streets for the laying of sewer, water, and gas connections. On such streets work has been postponed until building operations were fairly complete. Now, however, with these buildings occupied and most of the street disturbances completed, there is a call for considerable work to be done in surfacing these streets. Also many of the residential streets in the older part of the city are badly worn and must soon be rebuilt.

In the construction of our primary streets we have laid either Warrenite Bitulithic or stone block pavements. Of this type of streets there are still some uncompleted projects to be finished and a few entirely new sections that should be built. Among these I would mention the completion of East French Avenue, Mount Pleasant street from Durfee to Sawyer, North street from Cottage to Kempton, Rockdale avenue from Brock avenue to Dartmouth street, and First street between Brock avenue and Cove street.

For the building of secondary streets we have usually made use of penetration macadam, laid from curb to curb without paved gutters. In my opinion there will be a demand for the laying of a large quantity of this material during the coming year.

One of the most difficult problems that we face in street construction is the stone block pavement on concrete base which is slightly worn. This produces slight depressions in which mud and water stand, which is splashed onto pedestrians and buildings by the pneumatic tires of passing automobiles.

We have remedied long sections of this pavement at a considerable expense by topping it with Warren's Asbestophalt, which has given much satisfaction and is apparently wearing well.

Unfortunately, however, the most of this unsatisfactory pavement is on streets where there are car tracks and where the grade is very flat so that any raising of the pavement will result in forming ponds in the street. The only way in which this condition can be remedied may be the removal of the pavement and replacement with some form of asphaltic surface.

During the year the Union street pavement has been extended to Rockdale avenue, and the surface of Rockdale avenue put in first class condition to Kempton street. If North street is paved this year, these two lines of travel to the center of the city from the west should relieve all congestion of travel brought by the wide Fall River road by distribution over four narrower streets.

Union street has been widened to 60 feet from County street to Eighth street this year and hearings have been ordered for its widening between Eighth street and Sixth street. Orchard street has been opened from Arnold street to Union street, and I think that the Union street widening should now be extended to Orchard street, and that Orchard street should be accepted and opened from Allen to Bedford streets.

This would provide an entirely new and direct route for the Dartmouth street traffic to reach the center, thereby relieving Pleasant and Sixth streets to a considerable extent, as well as providing a much more desirable route.

This year Rockdale avenue was widened 40 feet on the west side from Kempton to Hillman streets, making it 80 feet in width in continuation of the wide section south of Kempton street.

This constitutes the first step in the opening of the Northwest boulevard which will complete the boulevard system around the city linking up all the parks.

The next section to be considered will naturally be that from Hillman to Rodgers streets, which is the most expensive part of the whole project on account of the number of buildings involved. From that point northerly the street lies almost entirely in unimproved land and should be acquired at a very reasonable figure.

Another street widening of much importance has been brought up by the declaration of the Pleasant Street Trust of its intention to erect a new and expensive building on the west side of Pleasant street between Market and Union streets. The question of widening this street was first brought up two years ago when it was thought the First National bank intended to build at the corner of Union street. The matter was not acted on, however, when it was stated that the bank did not propose to build at once.

If the street is to be widened it should, of course, be done before more expense is created by the erection of new and expensive buildings. The cost of this project, however, is so great in comparison to the benefits derived that it is a question if the widening should be undertaken at all.

A hearing has been held to test public sentiment as to the necessity of this widening and an extensive report is on file from a special committee appointed to consider this matter. At the present time no action has been taken to widen the street.

TRAFFIC.

In common with all the cities of the country, New Bedford has a serious problem in controlling traffic on its streets. Each city must solve this problem for itself as each is governed by different circumstances. We have attempted to handle our problem in the following manner:

During the summer, marks were painted on the surface of the streets for the guidance and regulation of traffic. For the benefit of strangers, city and town names with arrows of a color conforming to the state highway markings were used.

For the local traffic white lines were used in the middle of blind and unusual crossings and at busy corners. The location of these lines was carefully studied and experiments made with a long wheel base car to provide a safe turning with a maximum convenience to the users. These markings were a great help and we received much commendation and but little criticism of their design. This was particularly true in the case of out-of-town motorists. In order for these markings to be effective, however, they should be as few and as simple as possible, no other signs should be allowed on the street surfaces, and the police should see that no autoist is allowed to disregard them in the slightest degree, for if the lines are marked and not rigidly followed they create a menace to the safety of the public.

PLANNING.

An attempt was made by the City Government this year to create a planning board, but the order failed of passage. This is a very important matter and I believe that a planning board should be established. In the past few years, or since any systematic planning of the streets has been attempted the most of this work has devolved upon the Engineer.

From his familiarity with the subject and the equipment of the office, with its facilities for making necessary investigations and surveys, I think the Engineer should be closely connected with any planning projects. The subject is so large and so important, however, that I do not think it should be entrusted to any one man. A board of, say, five members would develop differing points of view and would lead to discussions which would develop important points that might otherwise be overlooked.

The Board of Survey has given careful consideration to all cut-up plans presented and has upon its own initiative approved the locations of 31.14 miles of streets in the section adjacent to Acushnet avenue between the Phillips road and the Braley road.

In all the Board has approved four plans received on petition, one plan of its own proposal, and amended three plans.

During the year 171,613 feet or 32.51 miles of street locations have been approved, making 327,901 feet or 62.10 miles of streets approved since the creation of the Board.

SEWERS.

The most of the sewer work this year has been for the construction of lateral sewers as petitioned for. The trunk sewer in Brock avenue, Bliss and Bolton streets has been nearly completed, thus relieving a very bad situation in the southwest section of the city.

An intercepting sewer 2122 feet long has been laid in River road from Howard avenue to the Tarkiln Hill road along the west bank of the Acushnet river. This will forestall a nuisance that would surely have been created at this location in the near future. A new pumping station is now being erected at Howard avenue to lift the sewage from this sewer into the Belleville avenue sewer.

The substructure is being constructed by the Street Department and the plans for the superstructure have been prepared by this office from those of the Brock avenue Station and the contract for the building will be let later, to be constructed by the City Property Committee under the Superintendent of Buildings. The contract for the pumps and motors has been let to Starkweather & Broadhurst and the apparatus will be ready for delivery in the spring.

There is a large territory north of Tarkiln Hill road that is building up rapidly and we are now receiving petitions for sewers from the owners of this property. Before these petitions can be granted several trunk sewers will need to be built through unoccupied land. As this is too large a building program for any one year, work should be started at once on some of these sewers and the systems gradually built, the construction to be extended over a period of years.

The following is a list of the present employees of this office:

Assistant engineers:

Leonard J. Hathaway, Jr.
Ira M. Chace, Jr.

Field force:

Milton Ashley
Robert S. Baylies
Elmer L. Deane
Milton H. Dean
Wilfred T. Fahey
Fred H. Hewitt
James S. McQuade
Edward F. Mulally
Raymond L. Viereck

Office force:

Norman Barstow
Percy Batchelder
Paul G. Covill
Benjamin F. Howe
Edward M. Slocum

Clerks:

Jessie Loughlin
Catharine C. Sylvia

Respectfully submitted,

GEORGE H. NYE,
City Engineer.

ACCEPTED STREETS — 1922.

Street	LOCATION	Date	Length and Width in Feet				
			22	40	45	48	50
Bedford	Waverly to Page	Aug. 31, 1922.					
Bliss	Brock Ave. to Bolton	May 26, 1922.					
Brightman	Sylvia to Wood	Dec. 18, 1922.					
Brook	Shaw to Irvington	Jan. 27, 1922.					132.
Carroll	Rockdale Ave. to Whittier	Sept. 29, 1922.	614.7		286.73		489.06
Chatham	Dawson to Tarklin Hill Rd.	Aug. 31, 1922.					486.68
Commonwealth	Kempton to Fairmont	Sept. 29, 1922.					353.61
Dutton	Heywood to Wildwood	Jan. 27, 1922.					1,161.95
Francis	Court to Kempton	June 9, 1922.	988.82				543.86
Harwich	Felton to Somerset	Aug. 31, 1922.					
Kenmore	Acush. Ave. to Pine Grove Cem.	Mar. 24, 1922.			576.58		1,236.78
Langlois	Acush. Ave., easterly	Apr. 28, 1922.					
Lloyd	Acush. Ave. to City Line	Apr. 14, 1922.	255.19				352.57
Orleans	Hersom to Tarklin Hill Rd.	Aug. 31, 1922.					976.96
Osborn	Bolton to City Line	Aug. 30, 1922.					625.62
Park Drive	Acush. Ave. to Ashley Boul.	Mar. 10, 1922.	2,566.52			5.29	
Pearl	259.01 ft. e. Acush. Ave. e. 5.29	June 23, 1922.					
Rochambeau	Brooklawn Ave. to Park Ave.	Jan. 26, 1922.					841.88
Somerset	Wood to Hersom	Jan. 13, 1922.					
Somerset	Hersom to Tarklin Hill Rd.	Aug. 31, 1922.	211.87				946.61
Stetson	Bedford to Morelands Ter.	Nov. 25, 1922.					508.13
Tisbury	Dawson to Tarklin Hill Rd.	Aug. 31, 1922.					339.83
Vernon	Wood to Hersom	Jan. 27, 1922.	234.15				
Victoria	Ashley Boul. to Church	Mar. 10, 1922.					1,813.39
Total			2,566.52	2,304.73	863.31	5.29	10,808.93

STREETS DISCONTINUED.

Howland Ter.	139.74 s. Cherry s. 86.57	June 8, 1922.			Width 37 ft.		86.57
Total		Total					86.57

Total increase for year 16,462.21 ft. — 3.118 miles

WIDENING AND ALTERATION OF LINES — 1922.

Street	Location	Date	Description
Pearl Rockdale Ave.	Acush. Ave. to R.R. property	June 23, 1922.	Widened 8 ft. on s. s.
Spring	Kempton to Hillman	June 23, 1922.	Widened 40 ft. on w. s.
Union	Acush. Ave. to Pleasant	May 14, 1922.	Widened 10 ft. on s. s.
Union	Seventh to Eighth	Dec. 29, 1922.	Widened 14 ft. on s. s.
Union	Eighth to County	June 26, 1922.	Widened 14 ft. on s. s.

CHANGE OF GRADE

Street	Location	Date
Duncan	Acush. Ave. to Kearsarge	April 28, 1922.

NAMES OF STREETS CHANGED..

New Name	Location	Old Name	Date
Potter	Shawmut Ave. to Rockdale	Grand	Mar. 24, 1922.

NAMES ADOPTED

Name	Location	Date
Walter Gouliart Square	Intersection of Rivet and Bolton	Sept. 14, 1922.
Taylor Square	Intersection of Princeton and Acush. Ave.	Nov. 22, 1922.

RECORD OF TIDES, 1922.

Month	HIGH TIDE			LOW TIDE			RANGE
	Average	Maximum	Minimum	Average	Maximum	Minimum	Average
January	— .306	+3.3	—2.3	—3.960	—2.7	—5.7	3.654
February	— .209	+1.4	—1.4	—4.129	—2.7	—5.6	3.920
March	— .175	+1.5	—1.3	—4.119	—2.8	—5.4	3.944
April	— .161	+2.0	—1.7	—3.935	—3.0	—4.7	3.774
May	— .138	+1.5	—2.0	—3.659	—2.8	—4.9	3.521
June	+ .190	+1.4	—1.0	—3.855	—3.0	—4.8	4.045
July	+ .110	+1.1	—1.1	—3.842	—3.0	—4.8	3.952
August	+ .231	+1.5	—1.1	—3.755	—2.8	—4.6	3.986
September	+ .273	+1.9	—0.8	—3.789	—2.9	—4.8	4.062
October	+ .171	+1.7	—1.0	—3.738	—2.9	—5.8	3.909
November	+ .067	+1.8	—1.2	—3.856	—2.5	—5.1	3.923
December	— .164	+1.3	—1.4	—4.064	—2.9	—5.1	3.900
Average for year	— .092			—3.891			3.882
Extreme for year		+3.3	—2.3		—2.5	—5.8	

All figures above refer to so called "Mean High Water" which is used at 0.85 feet below City Datum.

Observations for the past 26 years indicate that:

Average high water is .8116 below City Datum.

Average low water is 4.3998 below City Datum.

Average range of tide is 3.5893.

From Observations by Engineering Department.

MILTON A. BAYLIES,

Appointed Nov. 21, 1921.

ELMER H. JAMES

Appointed March 12, 1922.

DEPARTMENT MECHANICS,

GEORGE H. BAYLIES,

Appointed March 13, 1910.

PHILIP J. PREVOST,

Appointed December 31, 1919.

BATTERY MAN,

RAIMUND F. O'BRIEN

Appointed December 3, 1920.

DEPARTMENT LINEMAN,

THOMAS J. McCANN,

Appointed June 21, 1922.

PENSION ROLL.

CHARLES W. ALLEN, driver of Hose No. 3, joined the department April 25, 1892, placed on pension roll August 16, 1917.

EDWARD F. A. COWEN, hoseman Engine Co. No. 1, joined the department October 31, 1882, placed on pension roll October 20,

N. HERBERT GREENE, hoseman Engine Co. No. 4, joined the department October 31, 1882, placed on pension roll October 20, 1917.

JOHN H. BACKUS, department mechanic, joined the department June 9, 1894, placed on pension roll October 19, 1919.

DAVID A. COBB, seriously injured May 27, 1915.

WILLIAM H. YOUNG, hoseman Hose Co. No. 5, joined the department Dec. 31, 1888 placed on pension roll Dec. 18, 1922.

GEORGE H. COOK, captain of Hose Co. No. 2, joined the department March 5, 1884, placed on pension roll Jan. 1, 1923.

REPORT

HEADQUARTERS FIRE DEPARTMENT,
OFFICE OF CHIEF ENGINEER.

December 31, 1922.

To the Honorable the City Council:

Gentlemen:—I have the honor to submit herewith my nineteenth annual report, covering the operations of this department for the year 1922.

The department answered 825 alarms for fire of which number 37 were false and 19 for fires outside the city, Acushnet 9, Dartmouth 8 and Freetown 2.

A Fire Prevention Bureau has been created, 4553 inspections having been made by its members and many hazardous conditions remedied.

A Drill tower is being erected and a Drill School will soon be established.

The fire alarm system is in excellent condition. 17 new fire alarm boxes have been ordered for school houses and will be installed as soon as received.

APPARATUS IN COMMISSION.

- 8 Motor pumping engines.
- 4 Electric aerial trucks.
- 4 Combination Chemical and hose carriers.
- 5 Automobiles for Chief and Assistants.
- 1 Automobile for Fire Prevention Bureau.
- 1 Supply truck for repair force.
- 1 Supply truck for fire alarm branch.

APPARATUS IN RESERVE.

- 1 Motor combination pumping engine.
- 1 Motor combination and hose carrier.
- 3 Steam fire engines equipped with short towing poles.

MANUAL FORCE

Consists of 221 permanent men.

DEATHS

John Wooley, hoseman, Hose Co. No. 4; died July 26, 1922; joined the department March 10, 1908.

FATALITIES

Mary Freitas, seven months old infant daughter of Manuel and Isabella Freitas was sleeping in cradle in bed room, burned to death before parents discovered the fire. Sept. 22, 1922.

RECOMMENDATIONS.

I respectfully renew the recommendations made by me last year for the purchase of at least one City Service Truck and securing sites for two new fire stations in the north part of the city, also the extension of the building used as a repair shop.

2000' of hose should be purchased.

Respectfully submitted,

EDWARD F. DAHILL,

Chief of Department.

CITY OF NEW BEDFORD,

IN BOARD OF ALDERMEN,

Feb. 23, 1923.

Received, ordered printed in City Documents, and
sent down for concurrence.

RODOLPHUS A. SWAN,
City Clerk.

IN COMMON COUNCIL,

Feb. 23, 1923.

Concurred.

HAROLD WINSLOW,
Clerk.

FORTY-FOURTH ANNUAL REPORT

OF

THE BOARD OF HEALTH

OF THE

CITY OF NEW BEDFORD

To the City Council for the Year 1922.

NEW BEDFORD, MASS.

1923

L'INDEPENDANT PUBLISHING CO., PRINTERS

REPORT

New Bedford, January 10, 1923.

To His Honor, the Mayor and Gentlemen of the City Council:

The number of deaths in New Bedford for the year 1922 was 1560, and the death rate, based on the Census Bureau's estimate of the city's population, 127,542, was 12.23 plus.

This is a slightly higher rate than that of 1921, which was 11.38 plus, but it is lower than any other recorded death rate in the city's history. An adjusted rate, secured by deducting non-resident deaths, is 11.72 plus.

It is interesting to note that seventy-four of the deaths of 1922 were due to various external causes. They include seven suicides, thirteen gas-poisonings, twenty deaths due to automobiles, seven drownings, three homicides and eight burnings. Such deaths are not usually thought of as lying within the scope of public health work, yet they count in the death rate the same as deaths from disease. They constitute a fairly large group of strictly preventable deaths -- so large that if they had not taken place the general death rate would have been 11.65 instead of 12.23.

INFANT MORTALITY.

The number of deaths of children under one during the year was 345, one less than in the preceding year. Unfortunately for the rate, the number of births showed a substantial falling off, there being only 3344 compared with 3681 for 1921. The rate was 103.01, New Bedford thus getting back into the century class after having gone below the hundred mark. Of the 345 deaths, 99 occurred during the first week of life, 57 of them the first day, suggesting prenatal conditions and the necessity of more extensive maternity care and more skilled obstetrical attention.

Since the establishment of infant welfare work by the Board the infant mortality rates have been as follows:

1915	134.55
1916	132.34
1917	130.55
1918 (influenza epidemic)	184.33

BOARD OF HEALTH

1919	116.88
1920	117.07
1921	93.99
1922	103.01

THE SCHICK TEST.

One of the most important undertakings of the year was the administering of the Schick test to children in the schools. This work is fully described in the report of the Agent and Executive Officer, but it is well to say here that the large number of permission cards referred by the school children showed a gratifying confidence, among the parents, in the measures advised by the Board as a means of preventing diphtheria. No organized opposition was encountered. Children shown by the Schick test to be susceptible to diphtheria did not always submit to the three toxin anti-toxin treatments required to give them immunity, but the number that dropped out was no larger than might have been expected. The transfer of public school medical inspection to the School Committee leaves the following-up of this important work to the School Director of Health and Hygiene. The Board of Health will continue to offer the service to the children of the parochial schools.

GARBAGE REDUCTION.

The garbage disposal plant acquired by the city in 1921 was operated during the greater part of the year. A shut-down of a month or so during the summer, when a new road was being constructed to the plant, gave an opportunity for a needed overhaul. During this period garbage was spread on the ground of nearby farms and plowed in.

The use of a direct heat drier in connection with the Cobwell system, first tried at the New Bedford plant, has proved so successful from a sanitary point of view, and has so reduced the cost of treatment, that the manufacturers of Cobwell machinery have incorporated it in what they call the modified Cobwell process. The use of chloride gas, regulated by a special device, has been effectual in preventing the dryer from giving off offensive odors, and during the year not one complaint has been registered against the plant on this ground. On the strength of New Bedford's experience a modified Cobwell plant is to be established in Syracuse, New York.

The cost of operation has, on the whole, been disappointingly large. Chiefly this has been due to the fact that the plant was old when the city took it over, and that much of the equipment had reached a stage where it could be kept in service only by frequent repairs. There is great need of 3 new reducers to replace three that are practically worn out.

During the year the furnace connected with the dryer was equipped with oil-burners. These have proved satisfactory, and have effected some saving.

During the year there were issued 1025 permits for plumbing work of all kinds, 532 being for old buildings and 493 for new structures. The work is classified as follows:

Water closets,	1643
Sinks,	1318
Bathtubs,	947
Washbowls,	1236
Washtubs	392
Urinals,	50
Drains,	28
Deep traps,	1
Surface traps,	16
Conductors,	15

It is with deep regret that the Board records the death, on Jan. 2, 1923, of Louis H. Richardson, senior Inspector of Plumbing. Mr. Richardson was, in point of service, the oldest man in the department. Indeed the oldest in the city government. He entered the health department as Inspector of Plumbing in May 1, 1888, he practically created this division of public health work in New Bedford. His wisdom, foresight, and insistence upon sound plumbing practice, have contributed to give New Bedford an excellent plumbing code and all inspection service of acknowledged efficiency. Mr. Richardson had the esteem of his associates; he commanded the confidence and respect of the plumbers; and in his death the city lost a man who had been an honor to the public service.

Respectfully submitted,

COOPER GAW,
L. Z. NORMANDIN, M. D.,
J. U. PAQUIN, M. D.

BOARD OF HEALTH

AGENT'S REPORT

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen:

The statistical record of the work performed in the department under my supervision is herewith appended.

One of the salient points in the reporting of births is the fact that during the year midwives reported a much smaller number than in former years, which leads one to believe that the expectant mothers among the foreign population are beginning to look with more favor upon the regular practitioner. Of the 3366 births reported to this department by the City Clerk, but 853 were reported to him by midwives, a falling off of nearly 200 as compared with 1921. True there have not been as many births the past year, but the falling off in this class carries with it the suggestion that the physician must be looked upon with more favor than in former years by the newcomers to the United States. There were less cases of bad eyes reported during the year, and as a consequence Mrs. Theresa Lyons, who is in charge of this work under the direction of Dr. Alphonse Normandin, made less visits than in 1921.

The following table may be of interest:

	Number of Births	Births Reported by Midwives	Visits by O. N. Nurse	Reports of Ophth. Neon.	Reports of Supp. Conj.
January.....	299	71	47	1	10

THE MILK SUPPLY.

It will be noticed by the table giving the record by months of the work performed in the department during the year that less than 200 inspections of dairy farms were made in 1922. These inspections were made by Dr. H. B. Hamilton in connection with his regular work in following up licensed milk peddlers. A more thorough inspection should be made of farms where milk is produced, and it is suggested that this work should be carried on during the fall and winter months when the animals are housed and not in pasture. The following table gives the record of samples taken for the bacterial count during the year.

	Number of Samples	From Cans	From Bottles	Duplicates	Bacterial Count	
					Below 50,000 per CC	Above 500,000 per CC
January.....	0	0	0	0	0	0

TYPHOID FEVER

For the first time in the history of New Bedford no deaths from typhoid fever were reported in 1922. But few cities of the size and character of population of New Bedford have this record. No doubt the Board's effort in prevailing upon the public to avail themselves of the use of the typhoid prophylactic has been a factor in this showing. Not one of the cases reported was traceable to eating shell fish from polluted waters, or to the milk supply. With the exception of three cases known to have contracted the disease from a family late

in the year previous, those reported carry the usual story, "don't know where I got it", -- probably the blame can be placed on automobile journeys, and the almost certain drinking of water in sections of the country never reached except by the auto, for it is an acknowledged fact that this disease is for the most part, rural in origin. The following is the record of deaths from this disease, since 1914, per 100,000 population:

1915.....	19.0
1916.....	4.1
1917.....	5.8
1918.....	8.3
1919.....	2.5
1920.....	10.6
1921.....	2.4
1922.....	NONE

TUBERCULOSIS.

There were recorded during the year 113 deaths from pulmonary tuberculosis, the smallest number since 1910 when there were 102. What is true of this disease in New Bedford is equally as true throughout the Commonwealth. During the latter part of the year there were a number of vacant beds at the local sanatorium, an experience never before realized since the Board began its work of caring for sufferers with this malady in 1909. The same condition prevailed throughout the State, reports showing that there were more vacant beds than in any year since the work was taken on. The capacity of the Commonwealth is 4,000 beds. Various causes are given as attributable to this condition, none of which can be applied to the local institution, the only reason in this city for the empty bed problem being a lack of patients needing institutional treatment. Especially was this true with men.

During the year there were reported 259 new cases of this disease against 298 in 1921, and 441 in 1917. On January 1st of this year there were 107 patients suffering with tuberculosis under treatment at the New Bedford Sanatorium. During the year the city paid to the institution's treasurer for the treatment of 249 patients the sum of \$71,271.33. The total cost for the care and maintenance of T. B. patients was approximately \$74,000, as stated above the local institution being paid the first named amount. From the records it appears that 152 patients were discharged from Sassaquin, classified as follows:

BOARD OF HEALTH

9

Arrested,	16
Improved,	31
Quiescent,	17
Apparently arrested,	27
Unimproved,	18
Died,	43

Of the patients 99 were married and 150 single.

The nativity of the patients treated follows:

New Bedford,	107
United States (other than N. B.),	39
Azores	19
England	19
Cape de Verde	18
Canada	12
Portugal	10
Poland	5
Russia	3
Madeira Islands	3
Scotland	3
Syria	2
Austria	1
Germany	1
Nova Scotia	1
Italy	1
Ireland	1
British West Indies	1
Greece	1
Wales	1
Albania	1

The occupations of these patients are classified as follows:

Students	92
Mill operatives	59
Housewives	45
Laborers	11
Sailors	5
Grocers	4
Painters	2
Friemen	2
Inspectors	2
Teamsters	2
Teachers	2
Chauffeurs	2
Office clerks	2

One each :

Dishwasher
Rope works
Auto mechanic
Errand boy
Roofer
Motorman
Farmer
Dressmaker
Eyelet worker
Stenographer
Shipping Clerk
Packer
Cook
Shoemaker
At home
Barber
Waiter
Laundress
Druggist

The decline in the number of deaths from tuberculosis throughout the United States is commented on by national authorities, one authority claiming that eleven years ago tuberculosis was, far and away, the leading cause of death. It now ranks second in importance to organic heart disease in the list of important diseases. The displacement of tuberculosis (this same authority contends), from its ranking position is one of the evidences of the success of modern anti-tuberculosis work.

Beginning October 1st, the Board took the treatment of other forms of tuberculosis, as required by law, and a number of patients have been given special treatment, for which Sassaquin is now equipped.

DIPHTHERIA AND SCARLET FEVER.

Twnty-three deaths from diphtheria is the record for the year. ..

During the year 305 cases were reported, an increase of 10 over the year previous when the record was the largest in the history of the city. It is gratifying however to note the fact that despite the slight increase in the number of cases in 1922, there were eleven less deaths from that malady than in

1921. The general use of diphtheria antitoxin and the calling of the physicians during the early symptoms of the disease is no doubt responsible for this result. Parents of children are beginning to realize that it is not wise to neglect a cold in youngsters. Nearly one half of the cases of diphtheria reported were children under school age as shown by the following table:

Cases of Scarlet Fever and Diphtheria under school age:

THE SCHICK REACTION.

Early in January the Board began the work of giving the Schick test to the school children of New Bedford, first sending out invitations to parents, which were distributed both in the public and parochial schools. Just prior to sending out these invitations the physicians of the city were invited to meet Dr. Benjamin White, at the head of the State's biological laboratories, who explained the value of the Schick test and the use of toxine anti-toxine. At this meeting several children who had been given the treatment were present to show the various stages of its action on the individuals treated. In response to the invitations sent out to parents 5409 school children were schicked, 3513 showing positive results, while 1746 were negative and 150 were not read because of absence from school after being schicked. Of the 3500 children showing a positive reaction 3272 were given the first treatment towards complete immunization, but interfering agencies succeeded in prevailing upon 681 to pass up the suc-

ceeding treatments hence but 2591 were given the necessary treatment for complete immunization. However as the board carried on this work every day in its own office with Dr. L. K. Doran in charge, we were able to show a record of about 3000 children, who have been given complete immunization, and of this number are the children in St. Mary's Home. The Schick test is of practical value in determining the immunity to diphtheria of the public in general, but especially of the child population in schools, hospitals, institutions and in homes during an outbreak of diphtheria.

ISOLATION HOSPITAL.

During the year ending December 31, 1922 the Scarlet Fever ward was opened for eight patients, while an equal number of patients were treated in the Diphtheria ward.

SMALL POX HOSPITAL.

During the latter part of the year, after consultation with His Honor, Mayor Remington, the work of repairing the Small Pox Hospital was commenced. An electric lighting system has been installed, and at this writing, bath rooms and water closets are being installed. When the work is completed, the city will possess an adequate institution for the treatment of small pox, at a cost very much reduced from what would have had to be expended for a modern institution.

MARKET AND STORES.

During the year there were made 3065 inspections of markets and stores. A very large percentage of these inspections were made by the four sanitary inspectors, who visit the markets and stores in their respective districts. This plan was adopted several years ago by the board. Frequent visits made by the sanitary corps have a good effect on store-keepers who are indifferent as to the cleanliness of their places. A number of instances, where drastic measures were thought to be necessary, were referred to Dr. H. B. Hamilton inspector of milk and provisions.

TEMPORARY INSANE.

The number of persons examined under Chapter 123, Section 82, General Laws, during the year was four. But one was found in a condition necessitating commitment to an institution for insane.

THE DEATH RATE.

The leading causes of death in 1922 were heart disease, broncho pneumonia, cerebral hemorrhage, pulmonary tuberculosis and cancer. There was a falling off in the number of deaths from pulmonary tuberculosis but in the other four causes, marked increases are shown, the greatest increase being in broncho pneumonia. Heart disease was the principal cause with a record of 193, while broncho pneumonia is

second with one less. The past year cancer removed 105, just 23 in excess of 1921 and cerebral hemorrhage has a record of 146, 53 in excess of 1921. Deaths by age groups show that the heaviest toll (as usual) was between 60 and 70, with 234, an increase of 67 over the record for 1921. Sixty more males died during the year than females.

The whole number of deaths for the year was 1560, and the general death rate based on the federal estimate of the City's population (127,542) was 12.23 plus. As there were 64 deaths of non residents during the year, the adjusted death rate is 11.72 plus, a trifle higher than the death rate of 1921. During the year there were 74 deaths from external causes, 20 caused by automobile accidents.

The following is the record of deaths and mortality rates

since 1889:

1890	775	18.9+	41,000
1891	960	21.8+	*44,000
1892	973	21.62	45,000

INFANT MORTALITY.

An increase in the deaths of children between one and five years, a falling off of one death among infants under one year, a falling off of two of the deaths under one month, and 46 less stillbirths than in 1921, mark the features in connection with the statistical record of infant welfare work. Forty per cent of the deaths under one year were children under one month, and again we must record the fact that over one half of the infants dying under one year of age, were of Portuguese parentage, while 29 percent of the infant deaths were of native parentage.

The first month is by all odds, the most hazardous in the entire span of human life. It is easier to survive a year at age 65 than for a newborn infant to reach the age of one month. It is claimed that more than four percent of all the two and a half million live born babies in the United States die in this early period. Together the stillbirths and the deaths of infants under one month account for the deaths of more than 200,000 children in the United States.

Parentage of the 345 infant deaths in 1922 is classified as follows:

United States	100	..
Portuguese	173	
Canadian	24	
English	23	
Greek	4	
Polish	7	
Spanish	1	
Russian	3	
Austrian	2	
Syrian	2	
Irish	2	
Italian	2	
Albanian	2	

The infant death rate is shown in the following table:

	Births	Deaths Under 1	Rate
1889	1178	217	184.21
1890	1077	215	199.63
1891	1350	282	208.88
1892	1678	279	166.26
1893	1647	350	212.50

General Death Rate
Adjusted Death Rate

12.23 plus
11.72 plus

Respectfully submitted,

EDNA E. WRIGHT, Clerk.

REPORT OF DIRECTOR OF FIELD WORK.

New Bedford, January 1, 1923.

To the Board of Health:

LL

Gentlemen:

I herewith submit my report for the year ending December 31, 1922.

It is gratifying to all who are interested in the work that is being done to control tuberculosis of the lungs to see the steady decline in the death rate due to this disease during the past twenty years. These are the years that have been marked by the greatest activity on the part of those who have been seeking to lessen the ravages of this disease, and we can but believe that their efforts have been the chief factor at work in bringing about this reduction in mortality.

New Bedford is equipped with almost all the agencies that are deemed essential for the control of tuberculosis. We have a clinic free to all; a Sanatorium, where active cases needing hospital care can be given treatment; nurses whose duties are those of follow-up work; and open air schools. The only thing that is lacking is a preventorium where all children who show suspicious symptoms could be cared for until their resistance would be built up sufficiently to give them immunity to active trouble. Until such provision is made for the care of suspicious cases, we must leave them to the care of open air schools. One step in advance has been recently made with respect to the treatment given the children in these schools. They are now brought to the clinic once a month by their teachers. This insures a monthly examination for the children and puts the teacher in possession of valuable information that enables her to better do the work assigned to her.

Our tuberculosis nurses have 972 persons under their supervision. Of these 514 are active pulmonary cases; 252 are arrested; 163 are suspicious and 43 have forms of tuberculosis other than pulmonary. During the year our three nurses not only attended the three weekly clinics, but made 8065 visits, giving bedside care to 56 patients.

Until a short time ago the Board of Health was responsible only for the care of persons suffering from pulmonary tuberculosis; now it is taking care of persons suffering from all forms of this disease. This is but a logical step in the right direction as tuberculosis is a constitutional disease, its local manifestation being in the lungs or elsewhere. Now

we can hope to work more effectively with the children who have bone or glandular trouble. They can be taken regularly to the Sanatorium for treatment by the Alpine lamp which promises much good in such cases.

The reports of the parochial school nurses are given elsewhere and show what they are doing for the children in the schools to which they are assigned. Through the influence of the nurses, scales have been introduced into more than half of the schools and the children are being weighed regularly and their weights recorded. We hope in time to have scales in all the parochial schools.

There are now six dental hygienists employed by the Board to give prophylactic treatments to the children in the primary grades in our public and parochial schools. Besides cleaning the teeth of the children, they give talks on oral hygiene and instruct the children in the proper use of the toothbrush. During the year 15,562 prophylactic treatments were given, 1710 children having their teeth cleaned during the summer vacation. Through the influence of our hygienists thousands of children not having tooth brushes have been induced to provide themselves with them and use them.

One great need, however, is yet to be met - - - the proper care of the six year molars. Now that we can extend our work to all the primary grades and to the children in the kindergardens we shall save these important teeth for thousands of the children. There are, however, all too many whose molars are decayed and need immediate attention to save them. Our already overcrowded dental clinics cannot take care of these children. What we need is a full time dentist with a portable equipment who could follow the dental hygienists and do the filling that is needed to save to the children these highly important teeth.

The infant welfare work has continued along the same lines as heretofore with only two changes. A clinic is held weekly at the Cedar Grove St. School, thus increasing the number of our clinics to six each week. Through an arrangement with the Instructive Nursing Association our prenatal work has been taken over by it. Since this arrangement was made more than 300 expectant mothers have been turned over to the care of this Association. This leaves the nurses of our force free to give their time and attention wholly to the care of infants.

During the year the infant welfare nurses made 48,088 visits. Despite many days of unfavorable weather the at-

tendance at the clinics was greater than during the preceding year. It was 8,467 and this represents the attendance of 1293 different babies. Mothers representing from ten to thirteen nationalities brought their children to the clinics, the Portuguese exceeding all others in number.

Had there been any increase in the birth rate the mortality rate for 1922 would be lower than it was in 1921. As the number of births were less, the rate will be higher. There was, however, no increase in the number of deaths of infants under one year. On the contrary, there was a gain of one for the record of the year. New Bedford is, I believe, the only city of its size in the commonwealth that had as few deaths of infants under one year in 1922 as in 1921. There were 3344 live births in 1922 and 345 deaths of infants under one, making our infant mortality rate 103.01.

During 1922, 345 infants under one year died and of these 139 lived less than a month. Just why so many infants die during the first month, no one seems to know. The high mortality during the first month holds true irrespective of difference of economic conditions. An earnest effort is being made to discover the causes of these deaths and until they are known we must redouble our efforts to secure the best possible prenatal and obstetrical care on the assumption that these are important factors in the solution of the problem.

Dr. Senesac's services have been of great value. During the year 133 babies were referred to him and resulted in his making 218 calls.

The reduction of infant mortality in our city is the most difficult of all our health problems. Could mothers be persuaded to give themselves to the care of their infants for the first two years or even for the first year there would be an astonishing drop in the mortality rate. As it is, the mother weans her child prematurely and goes to work just when her care is most needed. Experiments have shown that artificial feeding is connected with a high mortality of infants. Breast fed babies have a much better chance of life and build up a resistance to disease that artificially fed babies have not. Our work must of necessity make slow progress until the right of the infant to its natural food and to its mother's care is guaranteed it.

It has been my privilege to give addresses on health topics to clubs and in the schools. My main object has been to ex-

plain the nature of public health work and to remove prejudices that might exist against the use of vaccines and anti-toxin.

Respectfully submitted,

W. B. GEOGHEGAN,
Director of Field Work.

REPORT OF INSPECTOR OF MILK AND PROVISIONS.

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen:

I herewith submit my report as Inspector of Milk and Provisions for the year 1922.

During the year 712 store licenses and 90 team licenses for the sale of milk and 62 store licenses and 3 team licenses have been issued for the sale of oleomargarine, making a total of 867 licenses for which a fee of 50 cents each has been collected and the same paid over to the City Treasurer and his receipts therefor taken and placed on file.

The disturbed industrial conditions have resulted in many farmers applying for license to sell their own milk and in this way has greatly increased the number of licensed dealers. This condition has evidently reached its height and a reaction will likely soon set in. The various dealers' plants and producers' premises have been inspected from time to time throughout the year as occasion demanded, - especial attention being paid to those in poor condition.

The sausage factories have all been inspected and a report made to the Board of Aldermen before a license is granted by that body; also at various times during the year they have been visited and suggestions made along the line of cleanliness where needed. The bake shops have all been inspected and many changes along the line of cleanliness and conformity to law have been ordered and put into effect. The cold storage plant has been inspected as the law requires and the hotel kitchen has been inspected from time to time.

Respectfully submitted,

H. B. HAMILTON,
Inspector of Milk and Provisions.

REPORT OF ASSISTANT INSPECTOR OF MILK AND PROVISIONS.

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen:

I herewith submit my report for the year ending December 31, 1922. During the month of February the inspection of bottling establishments was taken up. Since February 21st one hundred and fifty-nine (159) inspections were made.

Number of ice cream establishments — thirty inspections. At the first inspection the sources of supply of cream, milk and ice of each establishment were ascertained.

Number of dairy inspections — eight.

At the suggestion of Agent Kirschbaum, the subject of the examination of rats was discussed. January 3rd active work was started; two men being employed as trappers. Approximately five thousand rats have been trapped and brought to the Laboratory for examination. Each rat is tagged and separately examined and records made of conditions found. Several diseases have been found among which were Pulmonary Tuberculosis and other respiratory conditions; up to present time no evidences of Bubonic Plague have been found.

Respectfully submitted,

C. S. STIRRETT, D V M

Assistant Inspector Milk and Provisions.

REPORT OF MEDICAL INSPECTOR.

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen:

My report as medical inspector and attending physician to contagious cases is herewith submitted:

Cultures taken 745.

Scarlet Fever Releases 218.

Typhoid Fever Investigations 20

T. B. Diagnosed 92

Investigated 68 other cases.

Signed death certificates for 13 deaths, there being no attending physician at time of death.

Made 218 calls to sick babies; also made 72 calls to other patients for the department.

Respectfully submitted,

A. N. SENESAC,

Medical Inspector for the Board.

TUBERCULOSIS CLINIC.

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen:

I herewith submit my annual report as Chief of the Tuberculosis Clinic:

No. of Patients Examined,	2581
No. of re-examinations,	2074
No. of new Pulmonary cases,	130
No. of suspicious cases,	113
Not Tuberculosis,	287
T. B. Glands,	31
T. B. Bones,	1
T. B. Kidney,	1
Sanatorium advised,	162
Home Treatment advised,	9
Referred to Public Health Nurses,	266
Arrested cases,	4

Respectfully submitted,

JOHN M. WISE, M. D.,
Chief of Clinic.

REPORT OF VENEREAL DISEASE CLINIC.

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen:

I hereby submit my annual report as Chief of the Venereal Disease Clinic:

	Male.	Female.
New Admissions	154	89
Gonococcus infection	67	11
	<hr/>	<hr/>
Total admissions during year	221	100

" - Synthetic	139
Howe Silver Treatment and Cement and Silver Fillings	147
Treatments	312
Eugenal Paste and Silver Fillings	144
Temporary Teeth Extracted	1367
Permanent Teeth Extracted	258

.. Respectfully submitted,

LOUISE B. WRIGHT,
Dental Assistant.

JOHN GIBBONS, D. M. D.,
Chief Dental Clinic.

OCULIST'S REPORT.

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen: ..

I herewith submit the following report as Oculist to the Board for the year 1922.

Number of visits	1495
Number of cases of Ophth. Neon.	18
Number of cases of Supp. Conj.	133
Number of cases of Acute Conj.	15
Number of cases of Phlyctenular Conj.	5
Number of cases of Phlyctenular Keratitis	7
Number of cases of Eczematous Conj.	10
Number of cases of Blapharitis and Conj.	8
Number of cases of Keratitis	2
Number of cases of Cellulitis	2

All cases have resulted in no impairment of vision.

Respectfully submitted,

ALPHONSE NORMANDIN, M. D.

.....

REPORT OF BACTERIOLOGIST.

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen:

Therewith submit my report for the year ending December 31, 1922:

Diphtheria:

Whole number of cultures examined	980
Whole number of cultures positive	127
Whole number of cultures negative	846
Whole number of cultures unsatisfactory	7

Tuberculosis Pul. :

Whole number of specimens examined	137
Whole number of specimens positive	41
Whole number of specimens negative	88
Whole number of specimens unsatisfactory	8

Tuberculosis Pul., N. B. Sanatorium:

Whole number of specimens examined	151
Whole number of specimens positive	116
Whole number of specimens negative	29
Whole number of specimens unsatisfactory	6

Typhoid Fever:

Whole number Widal reaction	12
Whole number positive	2
Whole number negative	10

Gonococcus - - Smear:

Whole number, Clinic	58
Whole number, Private	12

Respectfully submitted,

A. H. MANDELL, M. D.,
Bacteriologist.

REPORT OF PAROCHIAL SCHOOL NURSES

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen:

Following is the report of the parochial school nurse of the North district for the past year:

Number of schools under supervision	5
Number of visits to schools	217
Number of visits to homes	450
Number of cases of defective vision	182
Number of cases of blepharitis	19
Number of cases of defective eyes	13
Number of cases of hordeolum	17
Number of cases of tonsillitis	11
Number of cases of impetigo	100
Number of cases of scabies	17
Number of cases of tinea	16
Number of cases of furunculosis	29
Number of cases of anaemia	5
Number of cases of otitis media	22
Number of cases of defective hearing	9
Number of cases of cervical adenitis	13
Number of cases of enuresis	7
Number of cases of eczema	9
Number of cases of Tuberculosis	5
Number of cases having tubercular tendencies	14
Number of cases of malnutrition	6
Number of cases of chorea	11
Minor cases investigated and cared for not included in above	204
Miscellaneous cases not included in above	96
Number of cases of defective vision where glasses were obtained	75
Number of cases of enlarged tonsils and adenoids where operations were performed	136
Number of cases of defective teeth where treatment was given	304
Assisted medical inspector with school examinations in four schools.	

Assisted Dr. Doran with Schick test in five schools.

Weighing and measuring children in three schools monthly and reweighing underweights bi-monthly.

I wish to thank the parents, teachers, St. Luke's clinics, City Mission, Dental Clinics and all others for their kind cooperation.

Respectfully submitted,

MARY L. SHER.

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen:

Following is the report of the parochial school nurse for the South district for the past year:

Number of schools under supervision	5
Number of visits to homes	419
Number of visits to schools	195
Number of cases of tinea	29
Number of cases of impetigo	136
Number of cases of furunculosis	26
Number of cases of eczema	46
Number of cases of scabies	15
Number of cases of defective vision	125
Number of cases of hordeolum	14
Number of cases of blepharitis	5
Number of cases of defective eyes	10
Number of cases of defective hearing	10
Number of cases of otitis media	8
Number of cases of malnutrition	4
Number of cases of enlarged tonsils and adenoids	201
Number of cases of ainal adenitis	8
Number of cases of bronchitis	3
Number of cases of tuberculosis	2
Number of cases having tubercular tendencies	6
Number of cases investigated and cared for not included in the above	283
Number of cases of defective vision where glasses were obtained	78
Number of cases of defective teeth treated either by own dentists or clinics	304
Number of cases of enlarged tonsils and adenoids where operations were performed	115
Assisted Dr. Croacher with Schick test in five schools.	
Pupils weighed and measured in three schools monthly and underweights bi-monthly.	

I wish to thank the parents, teachers, City Mission, St-Luke's Hospital Clinics, Dental Clinics and all others for their kind co-operation.

Respectfully submitted,

BERYL I. ROSS, R. N.,

REPORT OF INSPECTOR OF SLAUGHTERING.

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen:

My report as Inspector of Slaughtering for a portion of year 1922 follows:

Number of beef cattle slaughtered	177
Number of hogs slaughtered	57
Number of calves slaughtered	606
Number of sheep slaughtered	10

Of the beef cattle 14 were condemned, of the calves 3 were condemned as unfit for food of the swine and sheep none were condemned. The above were slaughtered previous to July 15th when the regular inspection was taken over by Edgar E. Cory, I acting only as Referee in case of any dispute.

Respectfully submitted,

H. B. HAMILTON

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen:

I began my duties as Inspector of Slaughtering July 15th and since that time I have the following report to make.

I have inspected for slaughter 455 calves, 113 beef cattle, 39 hogs and 1 sheep. I have condemned 4 beef cattle and 1 calf, the last named for immaturity.

Respectfully,

EDGAR E. CORY,
Inspector of Slaughtering.**REPORT OF PLUMBING INSPECTORS.**

New Bedford, January 1, 1923.

To the Board of Health:

Gentlemen:

Following is the work performed by the Inspectors of Plumbing for the year ending December 31, 1922:

Inspections, including investigations of nuisances, defective plumbing and relief valves, 6,138.

Respectfully submitted,

WILLIAM DEACON,
Inspector of Plumbing.

REPORT OF SUPT. OF GARBAGE PLANT.

New Bedford, January 1, 1923.

To the Board of Health

Gentlemen:

We submit herewith our report for the year ending December 31, 1922:

Total Garbage Treated, 9134 tons.

All small animals delivered are included in the garbage tonnage shown above.

Respectfully submitted,

A. M. THRESHER,

ANNUAL REPORT

January 1st, 1923.

To the Mayor and Board of Aldermen:

Gentlemen:

My report as Inspector of Animals for the City of New Bedford for the year 1922 is herewith submitted. An examination of all cattle, sheep, swine and goats was made during January and February by order of the Director of Animal Industry, and a detailed report as to their health and conditions was made to him immediately, on completion of the work. There was at that time 544 cows, 130 other cattle, 233 pigs and 5 sheep and a few goats, all of which were in good health and comfortably housed. Only one case of Rabies has developed during the year and while every effort was made to trace its source it could not be found and no other cases developed. There were quite a number of suspicious cases but none developed positive symptoms. No cases of Glanders have developed during the year and only 4 cases of Tuberculosis in cows have come to my attention which have been properly disposed of. There have been the usual number of out of state cases coming here mostly from New York and New Jersey, all of which are under quarantine until identified and released. This duty the Inspector of Animals has attended to as the occasion required. No cases of Hog Cholera have been reported during the year.

Respectfully submitted,

H. B. HAMILTON,

Inspector of Animals.

Annual Report

OF THE

Inspector of Wires

TO THE CITY COUNCIL

For the Year 1922

NEW BEDFORD:
THE BAKER MFG. CO., Printers
1923

ANNUAL REPORT

New Bedford, January 30, 1923.

To His Honor the Mayor and City Council of the City of
New Bedford.

Sirs:—I respectfully submit my annual report of this
department, from November 30, 1921 to December 1,
1922.

INSPECTION OF INSIDE WIRING.

During the year have made 7926 inspections.

Have issued to the N. B. Gas & Ed. Light Co. 3516
permits to connect electric services.

Sent out to contractors and property owners 3193 reports
on defective wiring.

Have issued 1941 certificates on rough work.

Have superintended electrical work in the Clarence A.
Cook, Mt. Pleasant, Charles S. Ashley, Phillips
Ave., Congdon, Dunbar, Dartmouth St., Clifford and
Cedar St. Schools. Also the Veteran Firemen's
Station and the old Willis St. Police Station.

REMOVAL OF OVERHEAD WIRES AND CONSTRUCTION.

On January 13, 1922, after a meeting of the Inspector
of Wires, City Engineer and Superintendent of Streets,
the following letter was sent to the Mayor and Board
of Aldermen:—

Gentlemen:—

The undersigned met on January 13, in accordance with Section 3, Chapter 335 of the Acts of 1914 and voted to recommend the following streets to you for action in ordering the removal of poles and wires this year.

Willis St.....	Purchase to County.....	958.63 ft.
Campbell St...	Purchase to County.....	1036.69 ft.
Smith St.....	Walden to County.....	245.68 ft.
Sycamore St...	Pleasant to County.....	936.31 ft.
Thomas St...	Maxfield to Sycamore.....	279.85 ft.
Walden St....	Maxfield to Smith.....	518.59 ft.
State St.....	Maxfield to Willis.....	909.32 ft.
Pearl St.....	Purchase to County.....	935.19 ft.
Total.....		5820.26 ft.

City of New Bedford,
In Board of Aldermen,
February 8, 1922.

Whereas, under the provisions of Chapter 335 of the Acts of 1914, due notice has been given and a hearing has been held by this Board, it is hereby

Ordered, That all telegraph, telephone, electric light, electric motor or power, and all other wires, cables and conductors in and above the hereinafter designated streets, and all poles and structures in said streets used for the support of the same, excepting such structures, poles, cables, wires and conductors as are excepted by said chapter 335, Acts of 1914, shall be removed within the time named in said Chapter, or that said wires, cables or conductors shall be placed, maintained and operated in underground conduits.

Locations for said underground conduits shall be petitioned for in accordance with the provisions of Chapter 335, Acts of 1914, and all Acts in addition thereto or amendment thereof.

The streets or parts of streets designated and affected by this order are as follows to wit:—

Willis St.....Purchase to County.....	958.62 ft.
Campbell St...Purchase to County.....	1036.69 ft.
Smith St.....Walden to County.....	245.68 ft.
Sycamore St...Pleasant to County.....	936.31 ft.
Thomas St....Maxfield to Sycamore.....	279.85 ft.
Walden St....Maxfield to Smith.....	518.59 ft.
State St.....Maxfield to Willis.....	909.32 ft.
Pearl St.....Purchase to County.....	935.19 ft.
<hr/>	
Total.....	5820.26 ft.

And the City Clerk is hereby directed to serve notice of the adoption of this order upon the owners of all wires, cables or conductors in and above said streets, and all poles and structures in said streets for the support of the same, by mailing to each of said owners by U .S. registered letter mail, an attested copy of this order.

And the City Clerk is hereby further directed to cause this order to be recorded in the book of Location Order Records, as provided in Chapter 509, Acts of 1911, and to furnish a copy of this order to the Inspector of Wires, City Engineer and the Supt. of Streets of the City of New Bedford.

IN BOARD OF ALDERMEN, Adopted and ordered recorded in the Book of Location Order Records, February 8, 1922.

A true copy attest.

RODOLPHUS A. SWAN,
City Clerk.

OUTSIDE WORK.

During the year I have investigated and reported to the Mayor and Board of Aldermen on 365 petitions of wire using companies, involving 741 poles and 41 conduits.

POLICE SIGNAL SYSTEM.

During the year there have been 8 new police boxes added to the system and 5 boxes relocated. This work required the extension of overhead line construction for a distance of five miles. Overhead line has been removed for a distance of 600 feet.

On the night of April 18, the police box at Sixth and Madison St. was knocked down and destroyed. This location has been abandoned.

All of the boxes have been repainted and a new storage battery installed on the system. There are 74 police boxes, 4 official telephones and two flashlights in service.

The recommendations made last year are still more urgent this year and are again mentioned.

1st. A desk is needed at the Weld St. Station to relieve the Centre Station, which receives between 1200 and 1300 duty calls every 24 hours.

2nd. Signal lights to notify patrolmen on their beats to call the Central Station, would greatly increase the efficiency of the Police Department.

Very truly yours,

WM. P. BRIGGS,

Inspector of Wires.

CITY OF NEW BEDFORD.

IN BOARD OF ALDERMEN,

Jan. 11, 1923.

Received, ordered printed in City Documents for concurrence.

TRUSTEES' REPORT

*To the Honorable, the City Council of the City of New
Bedford, Mass.*

The trustees present their seventy-first annual report to the City Council in the Report of the Librarian, which has been adopted by the Board.

Respectfully submitted,

BOARD OF TRUSTEES,

GEORGE H. TRIPP,

Clerk of the Board.

LIBRARIAN'S REPORT

To the Trustees of the Free Public Library:

Gentlemen:—

In rendering the Seventy-first Annual Report of the Library, it seems appropriate to divide the report into sections, giving first the Resources and Additions, then the Activities of the year, then the Needs, and General Remarks in conclusion.

The past year has brought the contents of the Library up to 175,000 books, with many thousand pamphlets which are not accurately counted, but they number probably from 20,000 to 25,000. The magazines taken number 384, and 46 daily and weekly papers are available in the newspaper room.

The books are distributed among the various departments of the main Library, in the three branches, and in 200 school rooms, each having a collection of 50 books; also books are sent to engine houses, mills, etc. Through the generosity of those who have made bequests to the Library we have been fortunate in the ability to purchase books without using city funds for that purpose. By these generous bequests, and by the added facilities of the Library building, which has now been occupied twelve years, the use of the books has more than doubled since leaving the old building. The outside circulation of books in 1910 was 247,995, while last year it was considerably in excess of 500,000.

It is well to call attention once again to the special collections which are a feature of our Library, and to its re-

sources as compared with other libraries not so well favored. These special collections cover the genealogical library, the textile books, the whaling books and pictures, and the very unusual number of books on printing and the laws of libel which were given in the will of Mr. Sayer, so many years a trustee of this Library.

The most important individual purchase of books during the past year was "The Chronicles of America," in 50 volumes, published by the Yale University Press.

It was found necessary during the summer, in order to fill out the books in our school libraries, to purchase very largely. Several thousand books were bought for the school libraries at that time.

The picture collection is increasing rapidly, so now there are between 40,000 and 50,000 pictures which are suitable for circulation. These are largely used in the schools as illustrative material.

An important work is being carried on in the Genealogical Room, where the daily newspapers are indexed for local material of more than temporary importance, and scrap books are used for clippings which may be of some future value.

During the past year the inside of the Library was entirely renovated with fresh paint, and the result is that every room presents a much more attractive and fresh appearance.

ACTIVITIES.

A new registration of card holders was begun on June 1st, taking the list of the card holders who were numbered below 15,241. In order not to cause congestion at the desk it was thought better to take the earlier numbers only, and

reserve the later registration for a future period. The work was carried on without friction or delay, and the results are valuable in weeding out many dead cards. In a city like New Bedford with so large a floating population, a great many cards remain in the boxes belonging to those who have moved from the city, and an occasional re-registration is absolutely needed. Such registration should be made at least every five years.

Among the publications of the year are the various bulletins, in which have appeared the list of the pictures of New Bedford contained in the Library, now numbering something over 700, and a list of the early New Bedford newspapers, of which the Library contains samples of 68. There was also published in March a list of business books and magazines which was distributed among business men in the city.

Various exhibitions have been held, one of Cathedrals, loaned by the American Federation of Arts; one, of Pennell's etchings, also obtained through this same organization; a notable collection of water colors by Miss Louisa Ricketson of this city; also a display of paintings by Mr. J. Duncan Gleason. A selection of the Curtis Indian pictures was also hung at one time during the year.

Various Library conventions and meetings have been attended by the Librarian and members of the staff. The Librarian attended a meeting of the Massachusetts Library Club in Boston, on February 3rd, where he spoke on the subject of "Music Collections in Public Libraries;" also, by invitation, he addressed the junior members of the Library staff in the Boston Public Library on "The Library Assistant in the Eyes of the Public." Later the same paper was given to the staff of the Providence Public Library. By permission of the Trustees, the Librarian attended the convention of the American Library Association at Detroit in July, and also a meeting of the Librarians of the larger libraries in Chicago on December 28.

As local secretary of the libraries in Southern Massachusetts the Librarian called together a convention of the librarians in this vicinity on December 5th. The meeting was well attended, and addresses were made by the Librarian and by Miss Thuman, who spoke on "Children's Reading." By invitation the convention visited the old Dartmouth Historical Society and Whaling Museum, and were entertained at luncheon by one of the Trustees of this Library.

Following the custom inaugurated last year book talks have been given in the Library on Monday afternoons. These have been given by local men and women, and have proved to be of interest and value.

In the summer Miss Ruth W. Hatch, the Reference Librarian, resigned after a successful term of service in our Library, and Miss Helen L. Cowles, who had had previous experience in Mt. Holyoke College, a California College graduate and a graduate of the library school at Simmons College, took her place. Miss Cowles has proved a very acceptable Reference Librarian, and the work has gone along very smoothly under her efficient administration.

An experiment was undertaken which has proved successful in appointing girls as pages for day work in the stacks. The change has proved to be beneficial, and the work goes along smoothly, and on the whole very harmoniously. It is safe to say that the work of the pages has never been more satisfactorily carried on than it is now.

Staff meetings have been held at more or less regular intervals during the year at which various members of the Library staff have made addresses and discussed library problems.

During the absence of Miss Thuman, who was granted an extended leave of absence by the Board, the work of the Juvenile Room was left in charge of Miss Ethel Wilcox, her assistant, who managed the department successfully. The

work during the summer months when the school books are called in, repaired and made ready for the opening of school in the autumn, is particularly strenuous, and I am glad to report that the books were made ready promptly, and all the schools were supplied at the opening of the term. In the Juvenile Room, as usual, the Christmas books have been displayed and attracted a good deal of attention from the parents of book takers.

School room classes have been instructed in the use of the Library by the head of the Juvenile Department.

A training class has also been instituted for certain promising High School girls who are given instruction in library methods, and it is hoped when their instruction progresses far enough, some of them may be able to become promising candidates for substitutes.

The Pedagogical Library has been improved so that a representative collection of books there is always ready for the instruction and use of the teachers.

The use of the Lecture Room and other meeting rooms on the upper floors of the Library has been constant, during the year 465 meetings having been held by 94 different organizations.

Americanization classes conducted under the supervision of Miss Shanahan of the School Department have been held in the Library, and very important work is being conducted in these gatherings. The people who attend the classes, which are carried on four or five evenings in the week, are most enthusiastic in their work, and show their appreciation of the instruction they receive. They are all adults, above school age, and the work cannot fail to be of lasting benefit.

Mr. Desaulniers, the editor of *L'Independant*, has assisted the Library by suggesting the purchase of certain French books which have been added to our shelves, and the service is very much appreciated.

The work in the branches has been carried on with creditable results. The South Branch suffered the loss, by death, of Mr. Wilkinson, who had served faithfully for a number of years. His place was taken by the Misses Hathaway, Akin, and Wilcox, who work in unison, each in turn devoting afternoons to the work, two always being on service in the evening. This was an experiment, but as far as can be judged at present, it is working well.

NEEDS.

The North Branch should have a special Children's Room for use in connection with the juvenile demands. If it were possible to use the south room, and install a special children's attendant, it would be of very great value to the young people of that section.

The geographical situation of New Bedford is such that there are certain parts of the city which are very greatly in need of additional library accommodation. There should be, whenever it can be carried out, a library branch in the northwest, southwest, and north sections of the city; an additional North Branch, somewhere about the center of activities, say $1\frac{1}{2}$ miles above the present location of the so-called North Branch is much needed, also the northwest and the southwest are very much cut off from easy access to the Library.

Several years ago a request was made for a Reference Librarian at the High School, who should be under the supervision of the Library, but whose work during school hours should be confined to the High School as a reference branch of the Public Library. At that time the School Department was willing to pay half the expenses of such a librarian. I would suggest that this proposition be taken

up anew, and some such arrangement made which would be vastly to the advantage not only of the High School, but of the main Library.

There should be an authoritative removal of restrictions on the number of books, including fiction over a year old, which can be taken at one time on a reader's card. More and more the libraries are removing restrictions which hamper in any way the free circulation of books where they are needed.

The consensus of opinion among library officials the country over is that the city might safely be asked to supply as a minimum amount for library purposes one dollar per capita. The average of 37 cities as compiled by the Librarian of Grand Rapids is a per capita tax for library purposes of \$.616.

The cost per capita to the City of New Bedford for library purposes is \$.49. With the inclusion of the various bequests, taking the total expenditures of the Library from the city funds and bequests, the total cost per capita is only \$.57 against a minimum requirement, according to the best authorities, of one dollar. Forty-nine cents per capita for the opportunity to use from 175,000 books, over 400 magazines and newspapers, and with unlimited permission to consult the Reference Department from nine in the morning till nine at night! Without the facilities of the Library how much intellectual refreshment for a year could be obtained for forty-nine cents?

As with most libraries there has been some mutilation of books, which has been annoying and disturbing. Constant care is being taken to prevent this vandalism, but in spite of the greatest care, such mutilation is frequently reported. The only way in which it can be avoided is by more and more constant supervision, and where such damage is dis-

covered, severe punishment should be imposed. The Library officials have been in frequent consultation with the teachers in the various schools in order to counteract the loss sustained by such depredations.

GENERAL REMARKS.

The home circulation of books, which is not perhaps the most important function of the Library, differs greatly in cities of different sizes. By careful tabulation, it has been found that the larger the city, the smaller the per capita circulation. In cities the size of New Bedford the circulation per capita is usually about 4. Our circulation for the last year was a little more than that.

In order to procure books which had been out for a long time, a Fineless Week was featured in April. A good many books were returned at that time, some of which had been lost to the Library for months, and some for years.

It is very agreeable to those having charge of the Library to receive the pleasant comments which are frequently given by those who show their appreciation of the library work by pleasant words. A young man who is a student in the Normal Art School in Boston, although not a resident in New Bedford, was able to prepare himself very acceptably for that school by technical business books which he was able to get from this Library, and which he had not been able to secure at home. This is only typical of many cases where appreciation is shown for favors received.

As in many years past, the friends of the Library have added to the enjoyment of visitors by contributing very liberally during the summer months by gifts of flowers.

As usual the Boston Library has very generously acceded to many requests which have been made for books which our Library did not contain. We have passed along the courtesy by sending very many books to neighboring communities, notably Vineyard Haven, Edgartown, Chatham, and Nantucket.

A pleasant innovation was made by an invitation to the City Council to visit the Library at the beginning of the year. This invitation was accepted by those of the City Government who were not otherwise engaged, and a very enjoyable evening was passed.

A suggestion was made at one of the library conventions that it might be to the advantage of the various branches to have local committees from the various sections of the city serve as informal advisory boards, who might keep in touch with the Librarian, and suggest possible methods of increasing the interest in those branches.

The work of the assistants has on the whole been harmonious and satisfactory, and the Librarian feels that he can count on their co-operation in helping fulfill the best interests of the Library.

The Librarian wishes to express again his cordial thanks to the Trustees for the vital interest they have always shown in the conduct of the Library.

GEORGE H. TRIPP, Librarian.

ART ROOM.

The year has seen no marked changes in the work of this department, but a gradual growth in attendance and appreciation by the book and picture-loving public.

The present arrangement of the music collection, offering as it does almost unlimited access, seems to give great satisfaction, so that when it becomes possible to have all of the books in one room, we look forward to giving still better service.

New books are always welcome, especially those upon house planning and flower gardening, but perhaps no one work added during the past year has been so enthusiastically received as E. V. Lucas' "Life of Edwin Austin Abbey, R. A.," truly a valued gift.

Many favorable comments upon the retinting of the walls have been heard, and the improvement in lighting facilities seems to be highly appreciated.

JANE E. GARDNER, Reference Librarian.

GENEALOGICAL DEPARTMENT.

During the year just ended, the work of this department has proceeded along the even tenor of its way. Newspapers have been checked up and indexed for items of local historical value, and scrap-books have been pasted.

Visitors from out of town have, in many instances, been able to find here much of value in tracing out family histories. Inquiries for genealogical material have come from the following states: Colorado, Kansas, Massachusetts, Minnesota, New York, Rhode Island, and Vermont.

The City Clerk's office has been very helpful this year and in previous years, in hunting up records for us whenever we have had occasion to telephone for help.

In telling of what has been taking place in the Genealogical Room this year, we must not fail to mention our new desk by which a long felt need has been gratified. This room shared with the rest of the building in a repainting of the walls and ceiling.

Some of the books acquired during the year, either through gift or purchase are:

"Lineage Book of the National Society of the Daughters of the American Revolution," vols. 41-57, inclusive.

"A Register of the Ancestors of Dorr Eugene Felt and Agnes (McNulty) Felt," compiled by Alfred L. Holman.

"De Maranville genealogy—descendants of Louis De Maranville," compiled by George L. Randall.

"An Account of some of the Descendants of John Russell," by the late Gurdon Wadsworth Russell, edited by Edwin Stanley Welles.

"Life in New Bedford a Hundred Years Ago—a Chronicle of the Social, Religious and Commercial History of the Period as recorded in a Diary kept by Joseph R. Anthony," edited by Zephaniah W. Pease.

"Descendants of the twin brothers John and Benjamin Wood," compiled by James A. Wood.

"Plymouth Tercentenary," by H. Bloomingdale.

"History of the Pilgrims and Puritans," by Joseph Dillaway Sawyer, edited by William Elliot Griffis.

"Mayflower Descendants and their marriages for two generations after the landing," published by the Bureau of Military and Civic Achievement.

ALICE H. TRIPP, Genealogical Librarian.

REPORT OF THE NORTH BRANCH.

After the rush and confusion of the early evening when the North Branch resembles anything but an ideal library, and after the juveniles have departed with their literary provender, there comes a calmer time. That it is appreciated no one can doubt, and the opportunity then given those who find pleasure in the pleasant room and a good book seems not the least of the advantages of a public library.

More and more people are learning that they can come to the Library to consult the Atlas, the dictionary and the City Directory or yesterday's paper without taking out a card.

Grammar school pupils make good use of the Library for reference work and study, but many abuse the privilege by tearing desired items from books and magazines.

As to work with the new Americans which seems to take such a prominent place in many branch libraries, we can only say that of those who become our regular patrons, practically all prefer the books written in their own language. A few read the newspapers.

CITY OF NEW BEDFORD BOARD OF PARK COMMISSIONERS

December 1, 1922.

*To His Honor the Mayor and the Municipal Council
of the City of New Bedford:*

GENTLEMEN:

The Board of Park Commissioners has the honor to submit herewith the 29th Annual Report of the Department of Parks together with the financial statement for the fiscal year ending November 30, 1922.

The Board was organized for the year as follows:

Mr. William P. Covell was elected chairman, and Mr. William F. Caswell, Secretary.

The personnel of the Board remained the same as last year. The appointment of Mr. William F. Caswell for a term of five years to succeed himself was duly confirmed by the City Government.

The Commission in its previous reports has frequently recommended the purchase of the land south of Kempton Street adjoining the north line of Buttonwood Park. The acquisition of this land has been made possible during the past year by purchase through a special appropriation. This tract consists of two hundred and sixty rods of low swamp land which necessitates drainage, filling and grading. During the past year we have made some progress towards this development in the way of draining and filling in. It is our hope the coming year to secure the services of a landscape architect to draw up plans along artistic lines which will

BROOKLAWN PARK

beautify this new plot and it will also give us a comprehensive plan outlined in detail from which to work as funds become available. We would like an attractive entrance to the Park from Kempton Street, one that is dignified yet somewhat ornamental in character.

A much needed improvement was made the past year at Buttonwood Park in the building of a new barn comprising a wagon shed, tool room, and harness room. It facilitates greatly in handling the work in a more economical manner.

The north line of Middle Street between Acushnet Avenue and Water Street was widened by cutting away four foot of the sidewalk on the south line of Bridge Approach. This change of street line was advised by our Superintendent Mr. Sherman to relieve congested traffic at the bridge approach.

Would also recommend the acquisition of land along the south boundary of Hazelwood Park extending to Lucas Street and trust some active step may be taken to make it possible to secure this land before development in that section places it beyond our reach. This land is so situated that if purchased it would be a valuable asset to the natural attractiveness and future expansion of Hazelwood Park.

The rapid development of the section west of Acushnet Avenue and north of Nash Road together with the fact that Ashley Boulevard is now one of the main thoroughfares of the city, has directed our attention toward improving the west line of Brooklawn Park. We believe that the frontage on Ashley Boulevard should be improved to compare favorably with the entrance on Acushnet Avenue. During the past year work was started toward this improvement, and if necessary funds are available this work can be carried to completion.

TENNIS COURTS — BUTTONWOOD PARK

The Rose Garden at the Common has been a source of pleasure and enjoyment to all. The roses have made a good growth and a fine showing was made for the first year.

A new granolithic walk was laid on the north side of the Common as the torn up condition of the old walk made this immediate replacement necessary.

The total area of the parks at present is as follows:

Buttonwood Park,	95 acres,	113.52 sq. rods
Brooklawn Park,	84 acres,	121.88 sq. rods
Hazelwood Park,	23 acres,	8.39 sq. rods
Water Front,	8 acres,	116.00 sq. rods
Common,	7 acres,	32.00 sq. rods
Bridge Approach,	1 acre,	74.98 sq. rods
Grove Park,		149.54 sq. rods
Triangle Park,		25.87 sq. rods
Ashley Park,	4 acres,	51.39 sq. rods
Total area,	226 acres,	53.57 sq. rods

RECREATIONS.

Athletics—Three large athletic meets were held at Ashley, Brooklawn and Hazelwood under the supervision of the playground department. All entries were restricted to boys and girls under seventeen years, clasified in two different groups according to weight. Medals and ribbons were given to the winners of the events.

Baseball—Many new leagues were organized during the past season which revived the national game to many on the inactive list for years. There were ten leagues playing at the various parks and each had a successful season. Sunday baseball was very popular. The attendance at these games have averaged around three thousand at each of the three parks. The diamonds at all the parks were kept in very good condition. One of the most urgents needs and one

CANAL — BUTTONWOOD PARK

which we hope to go through with the coming year is the construction of bleachers at both Buttonwood and Brooklawn Parks.

Skating—The weather was ideal the past season, thirty days of winter recreation was enjoyed by the thousands who participated in the sport.

Tennis—The courts were in constant use throughout the season from May 30th until October 15th. The addition of new courts enable us to accommodate all who were interested in the game.

Bowling-On-The-Green—This game proved even more popular than last year. The Green at Hazelwood Park was kept in excellent condition and was constantly in use. Team matches were held during the season which added interest to the sport.

Picnics—The usual number of picnics were held at the various parks and through the co-operation of the park keepers everything was done to make it possible for better results in making everything pleasant for the parties.

Celebrations—The playground season ended with a Field Day Celebration at Buttonwood Park. Hundreds of children gathered there from the various playgrounds to enjoy the day's outing.

Too much thought cannot be given to playgrounds. We can readily see the advisability of purchasing more land for playground centers in the various congested parts of the city. One might be located in the vicinity of Madison Street and Acushnet Avenue, another somewhere in the neighborhood of Hampton Court.

During the afternoon of July fourth, Battery "D", 101st Field Artillery, Massachusetts National Guard, gave an exhibition at Buttonwood Park of Roman and Cossack riding

BLACK BEAR CUB — BUTTONWOOD PARK

mounted drill, and finished its exhibit by firing the national salute of 21 rounds from its four French 75mm. guns. The exhibition, which was under the command of Capt. Harold Winslow, Lieuts. Charles F. Perry, Jr., and Charles A. Stanley, was enjoyed by several thousands of interested spectators.

The City Government provided a display of fireworks at Buttonwood Park during the evening of July fourth.

Many other important and necessary improvements might be brought to your notice, but being aware of the impossibility of their being undertaken during the coming year, for financial reasons, only those which are the most needed have been placed before you.

Respectfully submitted,

BOARD OF PARK COMMISSIONERS,

William P. Covell, Chairman
William F. Caswell, Secretary

BROOKLAWN PARK

SUPERINTENDENT'S REPORT

New Bedford, Mass.,

December 1, 1922.

*Honorable Board of Park Commissioners,
New Bedford, Mass.*

Gentlemen:—

I hand you herewith my report as Superintendent of Parks for the year ending November 30, 1922.

We have the past year been able to introduce a more advantageous system of work in the department by the changing of the men from the different parks as the work required.

The foremen of the different parks have worked in harmony throughout the year and better results have been attained through their co-operation.

NEW WORK.

The new section of Buttonwood Park lying south of Kempton Stret was cleared and put in readiness for further improvement. We hope the coming season to employ the services of a landscape architect to further improve this new plot.

At Hazelwood Park the grove south of the Bowling Green has been cleared with practically no expense through the assistance given us by the Street Department.

THE "SHACK" — BROOKLAWN PARK
WHERE DANIEL RICKETSON ENTERTAINED HIS LITERARY FRIENDS.

By the addition of our new tennis courts the past year believe we have met the satisfaction of the players.

The rose garden at the Common was completed and did exceptionally well for the first year. The work upon this garden and results obtained reflect much credit upon the Departmental gardener, Mr. John Hennessey. This garden was installed at the suggestion of Mayor Remington. Primarily there was some opposition to it as it eliminated the children's slide, but it now meets the approval of most everyone, as we have made a new slide for the children which is even better than the original one.

I would suggest that with the first money available a new iron cage should be erected at Buttonwood Park covering that part of the canal bounded on the north by Court Street and on the south by the deer yard. This would enable us to take care of various kinds of birds and wild-fowl.

Respectfully submitted,

E. B. SHERMAN,

Gen. Supt. of Parks.

Cedar Grove Street School	Dec. 18th	16 "

It is with great pleasure that I report that during the year several public spirited citizens of New Bedford became deeply interested in my Safety Work and donated a sum of nearly three hundred (\$300.00) dollars to me for the purchase of proper equipment with which to perform this work. With this sum of money I have had pictures of many of my injured children in the schools taken, enlarged, and transferred to stereopticon slides. The same method being observed in the taking of photos showing how they were actually injured.

During the next two weeks I expect to receive from the Swain Free School a number of drawings of Child Life for use in the kindergarten. For these drawings I have offered prizes totalling \$50.00 for the best examples of child life.

During the year I have received and accepted a large number of invitations to address gatherings of persons interested in social work. It has been their unanimous verdict that similar work should be undertaken in their cities.

During 1922 I visited and addressed 514 rooms in the schools. Since the beginning of the Fall Term of school, I have spoken in 172 rooms and have 331 rooms to finish before the end of the year. They are listed under the dates in the preceding report.

I respectfully request that an appropriation of not less than two hundred and fifty (\$250.00) dollars be secured from the City Government for the purchase of such equipment as may be needed in the furtherance of this work during the coming year.

I cannot close this report without acknowledging my sincere gratitude to the Principals and Teachers of our schools for their many acts of kindness and courtesy. Their courtesy and co-operation has been unfailing.

Respectfully submitted,

ALBERT B. WHITE,

Safety Instructor.

MISCELLANEOUS BUSINESS.

PROMOTIONS

Under Civil Service Rules

Captain Samuel D. McLeod promoted to be Deputy Chief of Police; said promotion became effective April 9, 1922.

Detective Lieutenant George R. Lawrence promoted to Captain of Police; said promotion became effective April 9, 1922.

On June 15, 1922, the following named patrolmen were promoted to be Detective Sergeants, viz:

John W. Davies	Luke T. Haran
Wilfred H. Dupuis	William H. McCarty
Charles Fell	George A. Wilson

On December 27, 1922, Sergeants Edmund Foley, Arod B. Holloway, James J. Moore and William Welsh were promoted to be Lieutenants.

On December 27, 1922, Patrolmen Henry Butts, Joseph A. Fernandes and Daniel F. Harrington were promoted to be Sergeants.

APPOINTMENTS

On May 10, 1922, the following named persons, members of the Reserve Police were appointed to be regular police officers, viz:

Emery W. Johnson

Albert Livesey

On December 27, 1922, the following named persons, members of the Reserve Police, were appointed to be regular police officers viz:

Robert H. Boyer
James Carr, Jr
George B. Carrier
Erick M. Chaput
John J. Coughlin
John K. Doyle
James K. Durkin
William Hicks

John Hilton
Joseph Hutchinson
Eugene J. Kelley
Anthony A. King
William T. J. LaRoche
Frank S. Machado
John E. Mendonca
Antoine Turgeon

On December 27, 1922, the following named persons were appointed from the Civil Service Eligible List to be Reserve Police Officers, viz:

Orila J. Prudhomme
James J. Downey
Doran L. Mullins
Joseph A. Pelletier
Timothy W. Coughlin
James H. Craft
Thomas A. Hughes
Joseph Waring
William W. Dresner
Hugh A. Clayton

Augustine P. Trudel
Edward J. McGuire
Sydney H. Smith
William Raymond
Harold H. Sheffield
Napoleon O. Masse
Robert W. Hirst
Eugene T. J. Larochelle
Joseph Donnelly
Arthur A. Dufresne

REMOVALS

Charges were preferred against Patrolman Emile A. Lemrise, William Christie and Arthur Gorner. After being given a hearing, said charges being proven and sustained, they were removed from this Department.

PENSIONED

The following named patrolmen were retired on a pension during the year, viz:

William A. E. Howland
James A. Ivey

Daniel J. McDonald
James Marder

Charles E. Phinney

In Memoriam.

DEPUTY CHIEF JOHN C. PARKER

Died February 8, 1922.

Aged 62 years, 5 months and 12 days

LIEUTENANT JOSEPH B. WING (Retired)

Died May 23, 1922.

Aged 75 years and 10 months.

PATROLMAN TIMOTHY SULLIVAN (Retired)

Died January 11, 1922.

Aged 73 years, 9 months and 10 days.

PATROLMAN WILLIAM E. CLEARY

Died December 21, 1922.

Aged 44 years, 4 months and 6 days.

PATROLMAN WILLIAM A. E. HOWLAND (Retired)

Died December 30, 1922.

Aged 55 years, 6 months and 7 days.

DEPARTMENT.

I take pleasure in presenting for your consideration and approval a brief outline of the systems of work and instructions which have been introduced into the New Bedford Police Department, in order to place its members on an equal footing with the police officers of any city in America.

POLICE SCHOOL OF INSTRUCTION.

Entering upon the second term of its second successful year is the Police School of Instruction, under the direction of Lieutenant Albert B. MacKinstry.

Classes are held every day excepting Saturday, and two evenings a week, the night men going to the day classes and the day men going to the evening sessions. The average attendance at each class is twenty officers, and each officer is called upon to attend one session in each week.

The curriculum includes "Police Practice and Procedure" and through a well defined course of study and lectures, the results have been remarkable, and an officer now takes his place on the witness stand in court with a feeling of security and confidence which was heretofore lacking.

A book on "GENERAL INFORMATION FOR POLICE OFFICERS" was compiled by Lieutenant MacKinstry and Deputy Chief McLeod during the summer of 1922 for class-room use and study. This book was compiled after many hours of painstaking care by Lieutenant MacKinstry and Deputy Chief McLeod, and contains abstracts from the statutes of law which are exercised most, together with other information in police work. This book has proved its worth in many ways, and was welcomed by the officers. In short—it is a complete success.

An officer must be physically fit to perform his duty, and to this end we have a class in calisthenics, under the direction

of Patrolman Thomas Carr. Jiu-jitsu and boxing are the two principals taught, and the act of subduing boisterous prisoners is accomplished without harsh methods by use of same. This school is proving its worth and the officers enter into it with a spirit of enthusiasm and pleasure.

The use of a gun in police work, is a last resort, but when it MUST be used, one must know how to use it. We have established a class in marksmanship and the general use and instruction in revolver practice under the direction of Lieutenant Charles L. McBay.

In days gone by, a member of the force has carried his revolver for years without even taking it out of its holster, and in some cases it was never shot at all. This is all now eliminated, and we are developing some fine shots in the department.

In summing up the improvements in the way of instruction to officers, as above sketched, it is pleasing to note the results in the men. They are a snappier force, and I take pride in the personnel of the Department. The intelligence of the law which they display in court, instead of the hit or miss methods of times gone by, is worthy of note, and the sum total in one word spells EFFICIENCY.

RECOMMENDATIONS.

1. I respectfully recommend that this Department be given the use of the entire building known as "Police Station No. 2", at the corner of Blackmer and South Water Sts. The Department now occupies the first floor, and with the increased number of officers in this division, which includes all of the territory south of Cannon Street and west to the Dartmouth line, it is impossible to properly handle the business under the present conditions.

When officers assemble for roll call, there is not room for them to be seated; they have to line up against the wall.

Neither is there any room for lockers, etc. This would allow business to be transacted with some degree of secrecy, which is often necessary.

This would set aside the proposition of buying land and building a new Police Station in some other location in the South End for all time to come.

2. Owing to the constant and rapid growth of the North and Northwest sections of the city, I would recommend the installation of a separate switchboard in Station 5 at Weld Street, to relieve the constant strain of the present switchboard at Headquarters, which is now overloaded. The reason for this request is BETTER SERVICE. The old locations of police-duty call boxes were installed years ago, when conditions called for the police boxes in certain locations. However, since the advent of Prohibition and the abolition of the saloon, conditions have changed, and in order to obtain the best results and service, a large number of the signal boxes need to be changed, and placed in more serviceable locations. THE PRESENT LOCATION OF THE BOXES HAS BEEN THE SAME FOR THIRTY (30) YEARS. This would also include placing signal lights for the officers which are universally used in all cities.

I would also call attention to the fact that if at any time in the future a new police station was built farther north, when the occasion called for it, the expense of changing the switchboard would be a minor consideration, as provision would be made for that when being installed.

3. During the past few years, the automobile has increased by leaps and bounds in number, and in order to keep pace with, and provide for the future, I would suggest an extension of the present garage. LOCATION—south of the present Second Street side, which could be used for repair work, and additional machine space, in consideration of the fact that we are very fortunate in having men who are cap-

able of doing their own repairs to automobile and motor cycles.

This would not be such an expensive proposition as it would appear to be, inasmuch as it would not require any plumbing and the walls of the present building would be used as a part of the addition.

4. That the Department be provided with a book of Rules and Regulations, for the government of the Department. The present regulations we are now operating under, were compiled in the year 1903. The statute laws and City Ordinances have changed since that time, and it is obvious that the present rules are very much antiquated.

In closing I might say that the neediest of the above improvements, is the enlargement of the officers' quarters at Station 2,—it is is the most urgently needed.

Respectfully submitted,

EDWARD P. DOHERTY.

Chief of Police.

*To His Honor, the Mayor, Board of Aldermen and
Members of the City Council, New Bedford, Mass.*

Gentlemen:—

The Board of Overseers, having been appointed in January, 1923, and the present report, covering only the year 1922, we wish to declare that the work of preparing the annual statement to the City Government was left with the Secretary, Mr. Poirier, whose familiarity with, and praiseworthy knowledge of, the affairs of the Poor Department have favorably impressed the present Board to the extent that we approve his views and commend his suggestions in the following report, which is now respectfully submitted, covering the fiscal year 1922:

Signed, JOHN MONIZ, Chairman,
 JOSEPH CHAUSSE,
 MARY E. RAWCLIFFE.

Despite the fact that the expenditures for the year were somewhat in excess of the appropriation allotted by the City Government of 1922, (\$23,706.95, to be exact) it is a source of gratification for the secretary to report that such expenditures were \$125,207.04 less than in 1921.

In 1921 the gross expenditures reached the unprecedented amount of \$503,410.16, while in 1922 there was a drop to \$378,203.12, showing, as above stated, a difference of \$125,207.04 in the matter of giving relief to the poor of the city, disbursing state and city pecuniary allotments to mothers with dependent children, and administering the Alms-house where the city's aged dependents of both sexes are boarded and cared for.

Such remarkable discrepancy strikes one as indicative of the extraordinary critical industrial conditions that prevailed in 1921, and the fact that the city of New Bedford, through its Overseers of the Poor and its staff of experienced officials was able to cope so successfully with the abnormal crisis, is deserving of more than ordinary commendation.

The report for that year will show that thousands of applications were received at this office from persons who were forced out of work through industrial depression, and who would never have found their way to this office but for the prevailing hard times.

Throughout the dismal year we had been encouraged to hope for better prospects for 1922, and though the return to a relative prosperity has been slow and gradual, yet it is real and apparently stable, so that we are glad to report that in our department, evidence of improvement are to be seen every day. The higher wages which have recently been granted generally throughout the state serve but to confirm our optimism that 1923 will be a banner year in all industries and commercial enterprises. Such general prosperity naturally redounds to the benefit of the Poor Department, as it naturally diminishes the number of applications for aid.

The appended tables show in detail the expenditures for each separate division of the department and though figures

are but dry stuff, they convey to the taxpaying citizens very interesting information as to how thousands of dollars appropriated for poor relief are disbursed and distributed.

MOTHER'S AID, CHAP. 118, G. L.

In the Division of Mother's Aid considerable improvement has been effected, in the administration of its various departments, by the appointment of a woman supervisor whose duties consist mainly in instilling into the mothers aided, proper and beneficial education affecting themselves and their children along lines of better living conditions.

The Overseers, mindful of the fact that the working of the Mother's Aid Law should benefit especially those mothers and children aided, and eventually the community paying for such aid, have seen through the experience of other cities the advantages of giving to the mothers a female visitor, one able in the nature of things to understand and appreciate, to supervise and to counsel with that womanly touch and feeling that is especially needed in such humanitarian work.

Mrs. Josephine Talford was appointed in May, 1922, to supervise the Mother's Aid Division and every activity connected with the administration of that division. All applications for aid under this law are referred to her. She attends to all the visiting, reporting, recommendations in the matter of increase or decrease of allotments, and co-operates in every way with the state agents appointed to exercise supervision over the mothers aided.

As the figures specifically referring to the expenditure of Mother's Aid show, \$68,673.38 was expended in this division, which is a slight increase over the amount expended in 1921. Of course, there is a small increase in the number of mothers aided, but the policy of this benevolent legislation is not essentially to stint and economize where uplift and social betterment are concerned, for the law specifically states that the aid furnished shall be sufficient to enable the mothers to bring up their children properly in their own homes, so that

we need not wonder at the gradually increasing cost of administering this law. It is costing a pretty penny to the taxpayers and is necessarily costing more and more every year.

A new amendment has been introduced affecting the 14-year-old clause, so called, which now reads as follows:

"Section 1, Chap. 118, General Laws, amended by Chap. 376, Acts of 1922. (Operative Aug. 1, 1922.)

SECTION 1. This Chapter shall apply to all mothers and their dependent children under the age of 14 or between the ages of 14 and 16 if and during the time when such children are required under Section 1 of Chapter 76 to attend a public day school, whether or not they or any of them may have a settlement within the Commonwealth, who shall have resided therein not less than 3 years."

This clause, therefore, extends to practically 2 years the period of aid to be allowed mothers receiving this compensation, and increases future expenditures in a proportionate ratio. On the other hand there is a continuous dropping off of cases where children have reached the working age, and consequently we can say with almost certain accuracy that the number of Mother's Aid cases averages between 130 and 135 the year round. This proportion is not extraordinary in view of our constantly increasing population, and compares favorably with other cities in the state.

ALMSHOUSE

The general expenditures for the almshouse for 1921 were \$87,406.17, while for 1922 the department has been able to manage with \$80,391.54, effecting a saving over last year of \$7,014.63. With the new policy adopted by the Overseers to make away with farming activities in so far as they were conducted for purpose of profit, and to restrict all production at the farm to the exclusive use of the Almshouse, it is confidently hoped that a further saving in the cost of administering and maintaining the City Home for the Aged will be made.

In last year's report there was mention of a petition to the City Council to erect a combination chapel and assembly room, and we are pleased to report that although such a

building was not erected, a substantial substitute for the same has been found in making over certain rooms in the east end of the building, by demolishing a partition, so as to form a large, well ventilated and well lighted hall. This improvement certainly was desirable because the former chapel situated on the top floor of the Almshouse constituted a dangerous fire menace to the old and infirm that congregated there on Sundays.

Another remarkable feature of this year's improvements is the new men's dormitory erected at a cost of over \$8,000, affording comfortable sleeping quarters to 50 or more men. This dormitory is well lighted, properly ventilated, with all convenient facilities for washing and bathing. At one end of this building there is a large, commodious smoking room where the majority of the men assemble daily to smoke, lounge around, to play at different games, and to use generally in fine or inclement weather.

New lavatories either installed or remodelled form distinctive features of the 1922 improvements, and what with the new electrical wiring about the building considerable amelioration has been effected for the benefit of all concerned.

All in all, the Overseers are ever desirous to provide the city's aged and infirm wards all possible comfort consistent with a policy of justice and wise economy.

Respectfully submitted,

CHAS. A. POIRIER,
Secretary.

Concurred.

HAROLD WINSLOW,
Clerk.

REPORT OF SEALER OF WEIGHTS AND MEASURES

February 6, 1923.

*To His Honor the Mayor and Members of the
City Government:*

In submitting my annual report for the year ending November 30, 1922, I desire first of all to call your attention to the fact that more work has been performed than in any other year in the history of the weights and measures department, and it has been performed this year with one man less than the previous year. This is due primarily to the fact that we were supplied with automobiles by his Honor the Mayor at the beginning of the year which enabled us to reach given points in quicker time.

I wish to say in this regard that it has of course, meant more work for the men employed here and I want to pay a tribute to them at this time for the efficient work they have performed and do sincerely hope that the Mayor and members of the City Government will see their way clear to reward them in the near future.

The scope of our work is continually being enlarged. This year under the law, we have taken up clinical thermometers and testing and sealing of glass graduates. We have been very pleased to do this as we feel that it is a great benefit to the public to know that the thermometers are correct and that medicines which we are all unfortunately obliged to take at times are measured correctly. While this has entailed quite a large expense to the drug store men they have co-operated with us in this manner for which I desire to thank them along with all the rest of the merchants.

The coal situation as you are no doubt aware has been acute this year. Along this line I wish to state that we are

endeavoring to secure legislation. One would be to standardize the paper bags to prevent the selling of bag coal only in quantities of 20 or 25 lb. The other is to drive out the profiteering which has been so rampant among the coal baggers this year by requiring a license to be issued for the sale of coal. To the big coal dealers I wish to pay a tribute. They have shown a splendid spirit all through this crisis, co-operating with us in every way and have done their best to sell coal at a reasonable price. The profiteering has been done by the baggers and the storekeepers. To illustrate I just want to point out in one instance, coal originally cost \$16.50 a ton over the road in New Bedford, sold in an 18 lb. bag for 21c, resold by one storekeeper at 25c to another and then resold again for 30c per 18 lb. bag.

As you are no doubt aware we have been removed to the central police station and are on the second floor. The quarters are very satisfactory as regards light and air and I have no fault to find with the removal but wish to state that it entails inconvenience to the public having to carry up and down two flights of stairs, weights and platform scales. If we have to remain here permanently I believe some provision should be made for an elevator. This would, of course, make it easier for us and it certainly would be a great convenience for the public.

There is another feature in the removal to which I desire to call your attention. As you are probably aware hawkers and peddlers applying for a city license under the ordinances must first of all have their scales and measures tested and sealed. Then they have to go to the city hall for their license which is an inconvenience to them and along these lines I wish to say that while without any desire to take from the City Clerk's office any of their prerogatives, I believe that the ordinance requiring them to go to the City Clerk's office could be changed with advantage to all and following the practice which is common in most of the large cities to have

the police department and the sealer of weights and measures have the power to grant these licenses. I wish to further point out that all hawkers and peddlers licenses have to be passed upon to a certain degree by the police department prior to them being issued. As we are at the present time it means that first of all the license blanks have to be filled out in the sealer's office and then sent to the city clerk's office. From him it is given to the officer in charge to be passed upon by the police department.

I don't know how the city clerk would take this matter as it is not with any intent or desire, or with any meaning that the work has not been efficiently performed but just for the sake of the convenience to the public. If the suggested change was made it would simply mean that they could come to the office of the sealer ; being in the police station we could quickly confer with the chief of police and in a few minutes the question could be settled as to whether or not the applicant was fitted to have a license. It would not mean any increase in the clerical force here. It would mean a little more work in the interest of efficiency and I believe it would be a good move.

In conclusion I wish to express my thanks publicly to the police department and the chief for their very efficient co-operations during the past year in the enforcement of the laws regarding weights and measures and particularly to thank the chief and deputy chief for the kind manner in which they have treated us since we have been placed in the central police station. They have gone out of their way to make matters pleasant for us and to make us feel at home.

ANNUAL REPORT
OF THE
SCHOOL COMMITTEE
OF THE
CITY OF NEW BEDFORD
For the Year 1922

NEW BEDFORD:
NEW BEDFORD PRINTING CO., PRINTERS
1923

Report of the School Committee.

STATISTICS.

I. POPULATION AND VALUATION.

The population of the city (census of 1890) was	40,705
The population of the city (census of 1895) was	55,251
The population of the city (census of 1900) was	62,442
The population of the city (census of 1905) was	74,321
The population of the city (census of 1910) was	96,652
The population of the city (census of 1915) was	109,462
The population of the city (census of 1920) was	121,217
Valuation of the taxable property (1922) was	\$200,964,491.00
School houses and lots,	5,851,728.00
Hathaway Playground,	11,575.00
Other school property,	322,803.95

II. APPROPRIATION.

Rate of taxation,	\$28.20
Amount for school and community center purposes not including new buildings,	\$1,388,000.00

III. SCHOOL CENSUS.

Number of children between five and sixteen years of age, and illiterates between sixteen and twenty-one years of age, reported by the census enumerators, in accordance with the census record taken April 1, 1922:

Between 5 and 7 yrs.	3,106
Between 7 and 14 yrs.	15,728
Between 14 and 16 yrs.	4,027
Between 16 and 21 yrs. (illiterates)	1,813

IV. SCHOOL ORGANIZATION, JUNE 30, 1922.

High school,	1
Grammar schools,	6
Mixed schools—Grammar, Primary and Ungraded,	8
Primary schools,	17
Suburban schools,	2
Fresh Air classes,	3
Orthopaedic class,	1
Conservation of Eyesight classes,	2
Cooking schools,	3
Manual Training schools,	4
Special Classes for Mentally Retarded,	6
Continuation schools,	3

V. SCHOOL BUILDINGS, JUNE 30, 1922.

Permanent schoolhouses,	36
Portable schoolhouses,	24
Frame buildings,	2

VI. TEACHERS AND PRINCIPALS.

Whole Number in Service, January, 1923.

High school,	51
Elementary schools,	472
Supervisors and assistants,	29
School nurses,	6
Evening High school,	20
Evening Elementary schools,	109
Americanization classes,	57
Continuation schools,	28

PUBLIC SCHOOLS.

	1922	1921		
Enrollment of pupils,	18,317	17,069	increase	1,248
Average membership,	16,759	16,254	increase	505
Average daily attendance,	15,826	15,445	increase	381
Aggregate attendance,	2,975,666	2,889,834	increase	85,832

PRIVATE AND PAROCHIAL SCHOOLS.

	1922	1921		
Enrollment of pupils,	4,636	4,424	increase	212
Average membership,	4,414	4,165	increase	249
Average daily attendance,	4,238	4,028	increase	210
Aggregate attendance,	771,964	733,820	increase	38,144

PUBLIC, PRIVATE AND PAROCHIAL SCHOOLS.

	1922	1921		
Enrollment of pupils,	22,953	21,493	increase	1,460
Average membership,	21,173	20,419	increase	754
Average daily attendance,	20,064	19,473	increase	591
Aggregate attendance,	3,747,630	3,623,654	increase	123,976

TABLE 1.

The cost of instruction per scholar is based on the average number belonging and the total amount expended for the maintenance of each department, not including the expenditures from the Sylvia Ann Howland Educational Fund, Paisler Fund, or Dog Fund, during the year.

High school,	\$126.64
Elementary schools,	74.02
Evening Elementary schools,	15.74
Evening High school,	16.28
Day school,	77.36
Americanization,	4.80

RECEIPTS AND EXPENDITURES. 1920-1921.

Summary.

Total appropriations, general and subsequent,	\$1,388,000.00
Total expenditures,	1,405,609.40
Deficit,	\$17,609.40

RECEIPTS—APPROPRIATIONS FROM CITY COUNCIL.

Teachers' Salaries—		
General,	\$745,000.00	
Subsequent,	231,500.00	
		\$976,500.00
Incidentals—		
General,	\$255,000.00	
Subsequent,	7,000.00	
		\$262,000.00
Repairs—		
General,	\$45,000.00	
Subsequent,	10,000.00	
		\$55,000.00
Continuation Schools—		
General,	\$73,000.00	
		\$73,000.00
Community Centers—		
General,	\$15,000.00	
		\$15,000.00
Playgrounds—		
General,	\$6,500.00	
		\$6,500.00
		\$1,388,000.00

EXPENDITURES—MONEY RAISED BY TAXATION.

For teachers' salaries:	
Day schools,	\$952,880.80
Evening schools,	34,145.50
Summer schools,	1,966.40
	\$988,992.70
For incidentals:	
Salaries: Superintendent and Secretary, Assistant Superintendents, Grade Super- visor, Inspector School Property, Depart- ment Mechanic, Clerks, Attendance Offi- cers, Nurses, Janitors, and Miscellaneous Service,	\$131,378.48

(a) Principals of Lincoln, Knowlton, Parker, Cook, Wood, Ingraham, Congdon, DeValles, Swift, Donaghy, Taylor, Rodman, Winslow, Ashley, and Mt. Pleasant Schools, \$3,350.

(b) Rockdale and Plainville principalships, \$50 in addition to salary to which principal is entitled as a teacher.

(c) Principalships with less than 10 class units, first year \$100, thereafter \$150 in addition to salary to which principal would be entitled as a teacher.

BASAL SALARY SCHEDULES FOR REGULAR CLASSROOM
TEACHERS WITH STANDARD EDUCATIONAL
QUALIFICATIONS.

Yrs. of Credited Experience	Kindergarten Elementary	Junior High	Senior High
0	\$1,000	\$1,300	\$1,500
1	1,100	1,425	1,650
2	1,200	1,550	1,800
3	1,300	1,675	1,950
4	1,400	1,800	2,100
5	1,500	1,925	2,250
6	1,600	2,050	2,400
7	1,700	2,175	2,550
8		2,300	2,700
Annual Increase	\$100	\$125	\$150

NOTE: Senior High School teachers in the service at the time the above schedule was adopted were receiving \$2,725 and no reduction was made in their salary.

Special teachers of sewing, cooking, and sloyd are subject to the schedule applying to the type of school, Elementary or Junior High, in which they serve.

Continuation School teachers are subject to the Junior High Schedule.

Service Differentials: On account of the difficulty of service, or the difficulty of securing competent service, of certain special types, the following amounts are added to the salaries to which teachers, rendering these special types of service, would be entitled under the basal salary schedules:

- (1) Teachers of ungraded classes, \$50.
 - (2) Assistant supervisors, or special teachers, of music, drawing, and physical training, \$100.
 - (3) Teachers of special classes—sub-normal, sight-saving, and fresh-air—working alone, \$150; with a "cadet" assistant, \$250.
- "Cadet" assistants, under the supervision of special class teachers, \$100.

Maximum salary of "cadet" assistants, working with special class teachers, \$1,300.

- (4) "Cadet" assistants, working with kindergarten teachers, salary according to basal schedules with a maximum of \$1,300.

- (5) Supervisors of groups of "cadet" grade teachers, \$100 first year, \$150 thereafter.

- (6) High School heads of departments, \$400 upon recommendation of the Superintendent approved by the Committee.

SCHOOL REPORT

17 and 18 rooms,	3.50 per night

COMMUNITY CENTER SALARIES.

Supervisors,	\$2,250.00
Assistants,	1,500.00
Assistants (per hour),	1.00
Janitors (per week),	28.00

CALENDAR 1923.

TERMS.

Spring term begins Jan. 29, 1923; ends June 29, 1923.

Fall term begins Sept. 5, 1923; ends Jan. 25, 1924.

Spring term begins Jan. 28, 1924; ends June 27, 1924.

VACATIONS.

Mid-winter vacation, one week, beginning Feb. 19, 1923.

Spring vacation, one week, beginning April 16, 1923.

Summer vacation, nine weeks, beginning July 2, 1923.

Christmas vacation, one week, beginning December 24, 1923.

HOLIDAYS.

New Year's,	January 1
-------------	-----------

Good Friday,	March 30
--------------	----------

Memorial Day,	May 30
---------------	--------

Columbus Day,	October 12
---------------	------------

From Wednesday noon before Thanksgiving the remainder of the week.

SCHOOL SESSIONS.

High School: Morning session, 8.30 a. m. to 12.30 p. m. Afternoon session, 1.00 to 4.25 p. m.

Grammar and Manual Training schools: Morning session, 9.00 to 11.45 o'clock. Afternoon session, 1.30 to 3.45 o'clock, without recess.

Primary and Kindergarten Classes: Morning session, 8.45 to 11.45 o'clock. Afternoon session, 1.30 to 3.30 o'clock. Recess in these classes for every pupil, 15 minutes in the forenoon, 10 minutes in the afternoon, as near the middle of the session as practicable.

In all other classes the sessions shall be prescribed by the Superintendent, subject to the approval of the Board.

Whenever in the judgment of the superintendent the weather is so extremely inclement as to imperil the health of the pupils, or the conditions are such as seriously to interfere with pupils going to school, he shall have authority to order a no school signal.

The signal for no session of the schools shall be two strokes on the fire alarm, once repeated (2-2), at 7.30 a. m. for the morning session, and at 11.50 a. m. for the afternoon session.

OFFICE OF SUPERINTENDENT OF SCHOOLS.

166 William Street.

Office open 8.30 a. m. to 4.30 p. m., except Saturdays.

Saturday, 8.30 to 4.00 p. m.

ALLEN P. KEITH, Superintendent.

Office hours, 8.30 to 9.00 a. m., 12 to 1 p. m.; except Saturdays.

Saturdays, 8.30 to 10.00 a. m.

CLARENCE E. HOWELL, Assistant Superintendent.

Director Secondary Education.

Office hours, 12.00 to 1.00 p. m., except Saturdays.

JOSEPHINE B. STUART, Assistant Superintendent.

Elementary Day Schools.

Office hours, 8.30 to 9.00 a. m., except Saturdays.

Mondays and Wednesdays, 4.00 to 5.00 p. m.

DR. HUGH GRANT ROWELL,

Director Dept. of Health and Hygiene.

Office hours, 2.00 to 3.00 p. m.

EDWARD T. N. SADLER, Director of Continuation Schools.

Office hours, 3.30 to 4.30 p. m., except Saturdays.

Chief Clerk.

VIOLA C. MANSEAU, 30 Durfee Street.

Assistant Clerks.

CLARA S. BLAKE, 270 Pope Street.

MARY G. PERRY, 357 Clinton Street.

GERTRUDE E. EGAN, 47 Independent Street.

Respectfully submitted,

TRUE C. MORRILL,

Secretary.

Letter of Transmittal.

December 29, 1922.

To the Honorable Board of Education,
City of New Bedford, Mass.

I am submitting herewith the Sixty-second Annual Report of the New Bedford Public Schools for the year ending December 31, 1922. This falls into the following general divisions: Part One, General Progress; Part Two, Policy for Progress; Part Three, Report of Departments; Part Four, Educational Progress; Part Five, Statistical and Financial Sections.

Very sincerely,

TRUE C. MORRILL,
Superintendent of Schools.

PART ONE—GENERAL PROGRESS

The annual report of last year was one of statistics due to the fact that Dr. Spaulding's Survey was then in progress. The Survey was later made in very complete form for the parts of the School System surveyed.

The survey does not show that any measurements and comparisons were made to reveal the relative position of the conditions or quality of work done in the schools as compared with that of other school systems. Dr. Spaulding gave some Chapman Standard Educational Tests which are designed to measure the quality of work in Reading and Arithmetic. The results of these tests were not included in the printed Survey. The graphs which were made to illustrate the results are on file. The results obtained in the 3B grade, according to the graphic sheet, were not up to the National standard in any school in the city. Those in the other grades showed varying conditions, some favorable and some otherwise.

In light of the facts revealed while he was surveying the system and with the knowledge of the quality of educational work being done in the schools as measured by these tests, a general reorganization of the School Department was recommended by Dr. Spaulding. In making these recommendations it is evident that he thought, in view of the facts then at his disposal, that the system had outgrown the organization which was supposed to adequately administer its Educational needs. Part of this scheme of reorganization in accordance with the plan outlined by Dr. Spaulding will be briefly stated as completed to date.

The Rules and Regulations of the Board of Education designed for governing the School System were revised and adopted by the School Committee in May, 1922.

The reorganization of the administrative and supervisory control of the system under several departments was recommended. To date this plan has been carried out as follows: An Assistant Superintendent of Schools as Director of Secondary Schools has been appointed. This was the most imperative

thing to be done according to Dr. Spaulding's judgment. He realized that the work of the last six grades needed reorganizing along modern lines and in accordance with the 6-3-3 plan.

The city was unusually fortunate in securing as Director of Secondary Schools, Clarence E. Howell, of Lincoln, Nebraska. Mr. Howell was born in Philadelphia. At the time of his appointment he was Assistant Superintendent of Schools in Lincoln. His preparation and work especially fit him to do efficient work in the field for which he has been chosen. He has assigned to him the additional tasks of Director of Adult and Supplementary education which embraces the work involved in Evening Schools, Americanization and Community Centers, as well as Director of Census, Attendance, and of Vocational Guidance which embraces all branches of work done by the attendance officers and placing misfit pupils in the system in places where they will better fit into their work. Mr. Howell's reputation throughout the middle west as a scholarly educator and result-getter augurs well for the work he has been chosen to undertake.

A most important work in connection with the Secondary School has been undertaken since Mr. Howell took up the work on October first. Scientific zoning by enrollment maps has been completed. Three Junior High School sites have been selected, approved and accepted. Mr. Howell did a most thoroughgoing piece of work on checking the plans and suggesting standards for the North Junior High School. The plans will be ready for final approval very soon.

A school system which professes to have adopted a 6-3-3 organization and over a period of years permits every variation therefrom to exist without change, has failed to recognize the Educational Economy that will result from proper co-ordination and unification of its system. A direct start on the work intended for the junior high school organization has already been made at the Ingraham School due to plans outlined by Mr. Howell and the willing and enthusiastic assistance accorded by its principal, Miss Briggs, and her corps of efficient teachers.

A full time Director of Health and Hygiene was appointed on August first, which was in accordance with the plan of reorganization. New quarters have been provided for the Department in what was formally the School Committee Room. The City now has a very complete and up-to-date department of Health and Hygiene. Dr. Rowell, assisted by six nurses has done very efficient work. The department is organized in such a way as to readily care for emergencies by taking on temporary help as needed thereby doing a maximum of work at a minimum of cost.

Writing has been put in charge of a full time Supervisor, the Zanerian Writing System has been adopted for the City and splendid results are already being obtained.

In accordance with another recommendation Principal Sutherland has been given an extra school to supervise and has been given an assistant to help with the work. Principal Cook of the DeValles School has been given clerical assistance in the office. This has released the principal for such important duties as pupil grouping, formation of new classes, use of modern tests and many other duties so necessary within a large, modern school.

A new salary schedule for teachers was incorporated in the new Rules and Regulations. This places New Bedford second in the State relative to salaries paid its teachers. Preference is given to local girls in the schedule by making Normal graduates, residents of New Bedford, ranking among the highest fourth of their class, eligible for appointment to teaching positions. Normal graduates, regardless of residence, ranking among the highest tenth of their class, and without experience are eligible for employment as "Cadet" teachers in the Elementary Schools.

In case of candidates of experience, preference shall be given to a resident of New Bedford, when, and only when such resident's qualifications are fully equal to those of any other available candidate.

With the salary schedule maintained by the City, there is no reason why New Bedford should not be able to obtain and retain the best teaching talent available anywhere for the benefit of its

children. With a strict adherence to the above adopted rules the standing of the schools should be elevated every year since the professional spirit from within and the supply from without will be of the highest quality.

Already there is under way a movement to provide a large cosmopolitan high school containing a wide range of elective subjects. An addition to the present high school has been planned to house the Junior High School at first and later to be absorbed and appropriated by the High School in developing into the above named organization. Such a high school will contain industrial courses such as Manual Training and the Practical Arts for the boys and Domestic Science for the girls.

The City is faced with the superlative problem of providing adequate housing facilities for its fast growing school enrollment. Adequate housing facilities must be provided where the ultimate need is to be greatest. These places can best be determined by a thoroughgoing School Building Survey. It has been found that at the present time there are 3305 vacant seats within the Elementary Schools. From Questionnaires lately sent to Principals of all elementary schools in the city, I have learned that the number of pupils in excess of seating capacity for full time classes amount to 1216 pupils. In the same questionnaire I am informed by the principals that it is possible to transfer only sixty of this overflow. This transfer from the school does not mean, however, that they can be received at the school to which they would be assigned. Many of the school rooms within the city contain many more than 42 seats, which was the maximum number of pupils Dr. Spaulding recommended per teacher. This excess of desks if removed would leave a very small number of available empty seats. Wherever an excess exists a general transfer of pupils is impractical when viewed from the side of parents and principals.

KINDERGARTENS

The very formal kindergarten of twenty years ago has been superseded by one in which the natural, free activity of the child from 4 to 6 years of age has a chance to exercise all its natural

play tendencies under the wise guidance of a teacher skilled in modern kindergarten methods. Such a school is preferably found in a large room equipped with tables, chairs, large blocks, simple apparatus for working off surplus energy and giving the child plenty of sway for his "multiple response" activities. Such a school cannot be carried on by a single teacher since one teacher is needed to play the piano for the songs and games which make up a large part of the work while the other teacher directs the activities. The new kindergartens organized this year have but one session. No kindergarten children in the city attend school all day. In the two-teacher kindergartens the two teachers have all the children in the forenoon and either do follow-up work in the homes in the afternoon or are busy at their schools organizing the new work and preparing for the next day. The new kindergartens have made a splendid start and will be two-year units working with the first and second year children in afternoon and forenoon respectively next year.

UNIT COSTS

Whenever the unit costs of school expenses are carefully presented it is usually an easy matter to get what is necessary to put the several departments of School Expenditure on a sound business basis. I am presenting herewith the basis by which we can very nearly forecast the normal demands for textbooks needs per year. If we take the list of books regularly used in the schools in each grade in the school and assign the price which each book costs the City then we are able to approximate the normal cost for textbooks per year as shown in the following schedule.

First Grade.

Aldine Primer, 55c; Book One, 58c; Book Two, 64c; Story Hour, Book One, 48c; Book Two, 58c; In Fableland, 61c; Work-a-day Doings, 48c; Winston's Primer, 48c; First Reader, 48c; Second Reader, 55c; Aldine Speller, Book One, 48c; Primary Writing Book, 7c; Hollis Dann's Music Book, 39c; Total cost for each pupil enrolled in this grade.....\$6.37

Second Grade.

Aldine Book Two, 64c; Aldine Book Three, 77c; Winston's Third, 72c; Riverside Second, 61c; Third, 67c; In Fableland, 61c; Cherry Tree Children, 55c; Circus Reader, 68c; Hollis Dann's Music, 39c; Writing Compendium, 7c; Aldine Speller, Book One, 48c; Hiawatha Primer, 67c; Red Feather, 64c; Total cost for each pupil enrolled in this grade.....\$7.50

Third Grade.

Peter and Polly, In Autumn, 45c; In Winter, 45c; In Spring, 45c; Eskimo Twins, 78c; Dutch Twins and Japanese Twins, 78c; Merry Animal Tales, 70c; Wilson's History Reader, 90c; Aldine First Language Book, 73c; W. & S. Primary Arithmetic, 48c; Aldine Speller, Book One, 48c; Writing Compendium, 7c; Hollis Dann's Music, 39c; Clematis, 60c; Total cost for each pupil enrolled in this grade.....\$8.04

Fourth Grade.

Pilgrim Stories, 63c; Arlo, 55c; Robinson Crusoe, 50c; Everyday Classics, Fourth Reader, 54c; Aldine First Language Book, 73c; Story of Our Country, Book One, 64c; Home Life Around the World, 71c; W. & S. Primary Arithmetic, 48c; Good Health, 40c; Aldine Speller, 48c; Hollis Dann's Music, 45c; Writing Compendium, 7c; Play Awhile Reader, 60c; Total cost for each pupil enrolled in this grade.....\$6.78

Fifth Grade.

Everyday Classics, Fifth Reader, 57c; Spyri's Heidi, 51c; Black Beauty, 75c; Dramatized Hiawatha, 15c; W & S. Arithmetic, 51c; H. & P. Arithmetic, 61c; Emergencies, 48c; Writing Compendium, 7c; Aldine Speller, Part Three, 48c; Winslow's United States, 80c; American Neighbors, 80c; Aldine Second Language Book, 80c; Story of our Country, Book Two, 80c; Hollis Dann's Music, Part Four, 45c; Total cost for each pupil enrolled in this grade.....\$7.78

Sixth Grade.

Stories of King Arthur, 75c; Story of Robin Hood, 75c; Winston's Silent Reader, 84c; Bolenius Silent Reader, 75c; Elson Reader, Book Six, 68c; Aldine Second Language Book, 80c; W. & S. Arithmetic, 51c; Ritchie's Primer of Hygiene, 64c; Story of the Old World, 80c; Winslow's Europe, 66c; Aldine Speller, Part Three, 48c; Hollis Dann's Music, Part Five, 45c; Writing, 7c; Distant Countries, 66c. Total cost for each pupil enrolled in this grade.....\$8.83

Seventh Grade.

Elson & Keck Junior High School Literature, Book One, \$1.12; Courtship of Miles Standish, 40c; Snow Bound, 42c; Aldine Third Language Book, 90c; Ritchie Primer of Sanitation, 74c; W. & S. Arithmetic, 54c; McMurry & Parkin's Geography, \$1.60; Beard & Bagley's U. S. History, \$1.20; Hollis Dann's Music, 45c; Aldine Speller, IV, 48c; Writing, 7c; Total cost of each pupil enrolled in this grade.....\$7.92

Eighth Grade.

Elson & Keck Junior High School Literature, Book Two, \$1.20; Evangeline, 42c; Vision of Sir Launfal, 40c; Turkington's My Country, 61c; Everyday Classic, 66c; Hitchcock's Junior English Book, Book Two, 90c; Beard's & Bagley's U. S. History, \$1.20; W. & S. Arithmetic, 54c; Ritchie's Primer of Physiology, 80c; Frye-Atwood Geography, \$1.60; Writing, 7c; Hollis Dann's Music, 45c; Aldine Speller, 48c; Total cost for each pupil enrolled in this grade.....\$9.33

Total cost for eight grades.....\$62.55

Average cost per grade, \$7.82. Since the average life of a book is three years, then \$2.61 is the cost per pupil for text books each year.

\$2.61 for 15,655 elementary pupils gives \$40,859.55 necessary for common school books each year.

The following curricula are offered in our High School:

Classical,	\$55.53
Commercial,	46.00
General,	51.30
Scientific,	—
<hr/>	
Total,	\$152.83

Average cost per curriculum for entire four years is \$50.94. Cost per year \$12.74, plus cost of blank forms 50c per pupil gives \$13.24 total cost of books. Average life of a book is three years, so replacement amounts to $\frac{1}{3}$ of \$13.24 per pupil or \$4.41 times 1356 pupils.....\$5,979.96

From the above, allowing three years as the normal life of a book we conclude that it will take \$46,839.51 to supply the normal demands for textbooks for the High and Elementary Schools. Actually the life of some books is more than three years, so when a book lasts six years it has halved its cost to the city.

Until we get some uniformity of text-book equipment in every school it is reasonable to suppose, with the above list available on requisitions, it will cost the city at least \$36,000 to meet the normal demands for this account. As soon as the three-year program is in effective use it will be possible to get along with 2% of the total school budget for text books. This is due to the fact that many books will last more than three years.

SELECTION OF BOOKS.

School text-books are used primarily for the benefit of the pupils in the schools. They are used largely by school pupils. Their selection for school use should be largely gauged by these criteria: Does the mind of the pupil respond correctly to the materials of the text? Is the subject matter understandable by the pupil? To discover these factors of primal importance no book should be adopted for schoolroom use which has not had schoolroom use by the pupils themselves. This is brought about by placing books designed for special

grades in the schoolroom library allowing pupils ready access to them throughout the year. The books most used as reference or pleasurable materials will be the books most successful in everyday use by the pupils. Such books when discovered will be safe for adoption. Before adoption, however, they should be censored by teachers, principals, supervisors, and Superintendent as to the pedagogical correctness and advisability for schoolroom use.

Such a list of books has been put in use in the New Bedford schools during the fall term—the term in which most books are bought for any school year.

On January 3, 1922, a Geography Committee recommended for use in the schools the McMurry-Parkins Geographies. This recommendation coincided with my own experience and method in selecting text books for use, as I had just completed a two-year's experiment on the Geography question. Consequently the McMurry-Parkins Complete Geography was placed on the approved list for use and complete adoption was made for all seventh grades in the City.

The History Committee, of which Mr. Raymond Cook is chairman, made a similar recommendation about the first of the year. In conformance to their recommendation, which was in accord with my own judgment, the Beard and Bagley History of the American Nation was adopted for use in the seventh grade. All pupils were supplied with this text at the beginning of the school year in September.

A recommendation on Primary Reading and Literature of which committee Miss Alice J. Lawrence was chairman was submitted in June, 1921. No action has ever been taken on this report. No school ever has too much supplementary reading material. During the fall term the following books were ordered from the new approved list for use in the grades indicated:

1. Eskimo Twins 3A (Geography Reader).
2. Pilgrim Stories 4A (History Story).
3. Winslow Geography Readers, Grades 4A, 5 and 6.

4. Story of our Country, Books one and two, Grades 4 and 5.
5. Aldine Language Books, Grades 4, 5 and 6.
6. Heidi 5A (Supplementary Reader).
7. Everyday Classics 5B.
8. Robin Hood, 6B } Foundation for
9. King Arthur, 6A } High School English Work.
10. Story of the Old World, Grade 6. (U. S. Background History).

None used before although history committee had selected one for use.

All other books ordered for the schools have been on refill orders or selected from the approved list already in use. Commendations of the above mentioned books have come from all parts of the System wherever they have been used.

STANDARD EDUCATIONAL TESTS.

Until within the past ten years measuring the progress of pupils through school has been done largely upon tradition, local and personal opinion, the personal judgment of the teacher usually having too much effect upon the success or failure of the pupil. A yardstick has been developed measuring the product of education so that now we can say with some confidence that we have progressed to a definite percent or point of proficiency as measured in other school systems. Many of these scales and standards are constructed in such a way that the pupils can measure their own progress, thereby having opportunity to try to beat their own records. This causes them to use judgment in their work, a very necessary factor for use in later life.

At the end of the fall term the following Standard Educational Tests were given in the schools. The results and conclusions are herewith given. The value of such tests is not in giving them but in diagnosing our own cases and prescribing a remedy. The good to be derived now is to follow up with a remedy and see that something is done to relieve any situation that needs readjustment.

AYRES SPELLING TEST.

Dr. Leonard P. Ayres, Educational Director for the Russell Sage Foundation, has devised a spelling scale after extensive research by which we are able to locate a pupil's spelling ability by grades. The words are arranged in columns so that if we give a test of words selected from a given column and a pupil spells 75% of them correctly, we are able to say that he has fourth grade ability in spelling, whereas if he spells 85% correctly he would show fifth grade ability.

The data for this scale was computed from 1,400,000 spellings by 70,000 children in 84 cities throughout the country. The words are 1,000 in number and the list is the product of combining different studies with the object of identifying the 1,000 commonest words in English writing.

The following list of words were selected from the respective columns for the examination:

COLUMN	L	P	T
STANDARDS FOR GRADES	III 73	V 88	VII 79
	IV 88	VI 79	VIII 88
	war	spend	guess
	summer	enjoy	circular
	above	awful	argument
	express	complaint	volume
	turn	usual	organize
	lesson	vacation	summon
	half	beautiful	official
	father	flight	victim
	anything	travel	estimate
	table	rapid	invitation
	talk	repair	accident
	June	trouble	accept
	date	entrance	impossible
	next	loss	concern
	indeed	fortune	associate
	herself	empire	automobile
	power	mayor	various
	wish	wait	decide
	because	beg	entitle
	world	human	national

Following are the percentage results obtained in the schools of the City and elsewhere:

GRADES	8th	7th	6th	5th	4th	3rd
CITY AVERAGES	97.7 98.9	90 86.8	89.2 90.3	82.7 72.2	96.6 91.6	80.8 67.2
Ayres' Standard	88	79	88	79	88	73
St. Paul's Scores	85.3	72	85.9	80.9	80.5	62
Bangor, Maine	83.4	67.5	81.6	54.6	76.5	43.9

It is evident from the above scores that the spelling in the New Bedford schools is all that could be desired. The quality of it even exceeds the Ayres' Standard which was considered to be high. If spelling in our schools is of such superior quality, then we can readily turn our attention to some other phase of the work which is found not to be up to accepted standards.

THE REASONING TEST IN ARITHMETIC.

The most widely used test to measure the power of reasoning in arithmetic is known as the Stone Reasoning Test. This test contains 12 problems graduated in difficulty and having a varying credit value dependent upon their difficulty. The time allowance for the test is exactly 15 minutes.

The first eight examples of the test with the value given to each problem, follows:

STONE REASONING TEST.

1. If you buy 2 tablets at 7 cents each and a book for 65 cents, how much change should you receive from a two dollar bill? Ranked 1.

2. John sold 4 Saturday Evening Posts at 5 cents each. He kept one-half the money and with the other half he bought Sunday papers at 2 cents each. How many did he buy? Ranked 1.

3. If James had 4 times as much money as George, he would have \$16. How much money has George? Ranked 1.

4. How many pencils can you buy for 50 cents at the rate of 2 for 5 cents? Ranked 1.

5. The uniforms for a baseball nine cost \$2.50 each. The shoes cost \$2 a pair. What was the total cost of uniforms and shoes for the nine? Ranked 1.

6. In the schools of a certain city there are 2,200 pupils, one-half are in the primary grades, one-quarter in the grammar grades, one-eighth in the high school and the rest in the night school. How many pupils are there in the night school? Ranked 1.4.

7. If $3\frac{1}{2}$ tons of coal cost \$21, what will $5\frac{1}{2}$ tons cost?
Ranked 1.2.

8. A newsdealer bought some magazines for \$1. He sold them for \$1.20, gaining 5 cents on each magazine. How many magazines were there? Ranked 1.6.

	Percent of Accuracy	Average Credit	Average Attempted	Average Correct	
Average for City Nassau Co., N. Y.	74.8	9.3	9.7	7.3	Eighth Grade
Columbia, S. C.				7.2	
				5.	
Average for City Salt Lake City	68.8	6.9	8.6	5.8	Seventh Grade
Columbia, S. C.				8.6	
				5.6	
Average for City Brookline, Mass.	59.1	5.2	7.5	4.4	Sixth Grade
Boston				6.2	
Columbia, S. C.				4.	
				4.5	
Average for City Salt Lake City	42.	3.2	6.8	2.8	Fifth Grade
Columbia, S. C.				3.7	
				3.1	

The results of the Stone Reasoning Tests show in the eighth grade that the accuracy in reasoning is equal to any school system in the country; going lower in the grades we notice an appreciable decline in accuracy until in the fifth grade the result is shown in the Average Correct column indicates that the work is poorer than in the places given which are typical results obtained in the better school systems where the test has been given.

HAGGERTY PRIMARY READING SCALE.

It is the general practice of school systems throughout the country to promote children in the first two grades largely upon the developed ability to read. Arithmetic is not introduced as a formal subject until the third grade is reached.

In determining whether or not a pupil is a good reader, reliance and responsibility should not be placed upon the judgment of any one person but upon a definite standard such as is embraced in this or similar tests, results for which are available from other school systems.

HAGGERTY SCALE FOR READING VOCABULARY OF PRIMARY READING.

SIGHT SCALE.

Line 50	Line 60	Line 80	Line 100	Line 120	Line 140
they	good	said	gold	falling	hungry
give	bread	asked	meat	want	pigeon
she	please	basket	myself	meadow	scratch
help	garden	flour	house	bean	afraid
me	baked	gray	mouse	wolf	breakfast

PHONETIC SCALE.

Line 50	Line 60	Line 80	Line 100	Line 120
would	ring	duck	dig	snag
out	cut	song	sled	slope
bit	time	dance	sent	rang
that	seed	feel	match	lance
fox	more	not	drive	care

Correct answers to be left as in spelling.

Mistakes to be checked.

Each child was tested, separated from the rest of the class.

This test was given in St. Paul, Minn., in 1917 and we have the figures of results obtained by which we can compare our own results. The figures in the following tables indicate the per cent of pupils taking the test in the respective grades who knew the whole line in question. A total line must be known by the pupil in order for it to count in the score.

Tabulation by grade divisions in the first two grades will be given by schools in full in the printed report. A summary is herewith given:

Place	Gr.	Pupils	Line 50	Line 60	Line 80	Line 100	Line 120	Line 140	Line 50	Line 60	Line 80	Line 100	Line 120
City Averages	2A	822	89	80	77	86	78	49	91	83	82	74	55
St. Paul		128	89	87	71	66	49	24	83	73	70	52	41
City Averages	2B	1066	82	72	66	74	61	48	77	66	65	59	36
Same as above given for whole grade.													
City Averages	1A	719	59	31	24	31	20	16	52	30	22	23	7.9
St. Paul		178	54	47	33	37	21	6	47	19	23	14	7.

The test given in the 1B divisions throughout the city showed that the pupils in these divisions lacked a knowledge of fundamentals usually obtained through word drills. Much of this missing foundation can be attributed to the fact that most of the children do not know English when they enter school. This weakness can be remedied by providing two years of kindergarten training. Another part of the weakness is due to the fact that there is the wrong balance of work within this grade. Too much emphasis is being placed on non-essentials in this grade to the exclusion of the reading foundation that should be begun here without delay. These things are briefly: story continuity, recognition of independent as well as grouped word phrases and word family training according to the method in use. With these foundations well laid retardation will be greatly relieved because pupils will be able to read for themselves, which means independent study.

PART TWO—POLICY FOR PROGRESS.

The general educational policies now in force as a result of Dr. Spaulding's recommendations are for a thoroughgoing 6-3-3 plan. Such a policy calls for:

a. A two-year kindergarten training for children between the ages of 4 to 6 years. Such an organization necessitates in each kindergarten a teacher to be known as a director, assisted by a second teacher. The object of this organization shall be to give children of these ages pre-grade training. Such training is designed to teach the children how to associate with others of the group harmoniously as well as to get some command of the English language. This latter object is one of the greatest needs of our schools. When children, upon entering the first grade, know our language much of the retardation throughout the schools will gradually disappear. To successfully accomplish the object with some uniformity throughout the City, kindergarten and primary centers should be provided within the same building, even including the first six grades. These centers should be provided approximately within each three-eighths mile circle radius.

b. The problem of providing Junior High Schools, adequate to the needs of the City, has been exhaustively and scientifically studied by Mr. Howell, Director of Secondary Schools, and is treated elsewhere in this report. These buildings will contain grades 7, 8 and 9.

c. The Senior High School problem is being studied by Mr. Howell and will be discussed in his report. Dr. Spaulding recommended a Cosmopolitan High School in which a wide range of electives could be chosen according to the individual needs of the pupil.

The public school housing problem is acute in the City. Many portables are used and many shift or part-time classes are necessary under present conditions. Needs for special classes cannot be met when the needs for regular classes are not satisfactorily met. The future policy in this direction should be:

a. To provide every child with a full day session in a regular classroom of 42 pupil capacity as a maximum. Many classes in the City at present exceed an enrollment of 50 pupils

b. To correct lighting conditions in poorly lighted schoolrooms. To correct wrong placement of desks in many of the schoolrooms where the light now comes either from the back of the pupils or from the right side.

c. To remove all pupils from rooms poorly suited for schoolroom use.

d. To replace as soon as possible all buildings which present a large fire risk by buildings of first class construction located on adequate sites providing ample playground space per child.

e. To provide for neglected upkeep of the school plant in a definite program extending over a few definite successive years, with the extra expense equally distributed within the years.

f. To provide for growth of the School System in the yearly budget.

g. To relieve Principals of large schools from small, routine duties so they can better apply their time in the supervision of instruction within the units assigned to them.

PART III—PROGRESS.

1. Three new Elementary Schools were opened in the fall of 1922. The buildings cost an aggregate of \$1,892,966 or about \$600,000 each. They have a combined seating capacity of 2436 pupils or about 840 each for Chas. S. Ashley and Mt. Pleasant and 756 for the Clarence A. Cook School.

2. A new portable at the Winslow School enabled the opening of a Special Class of 15 pupils at that building about the first of December, as well as removing a class of 35 pupils from the small library room.

3. Opportunity classes were opened at the Knowlton, Mt. Pleasant, Cook, Ingraham, and DeValles Schools. These classes enable pupils who are back in their work due to absences, illness or conditions beyond their control to get back into a regular grade in a short time.

4. A full time director of Special Classes has been appointed. Miss Bassett now has charge of all such classes as well as the organization of all the new classes of this kind.

5. A continuation of the policy and support of the Community Centers within the School Department is assured.

6. A continuance of the recreational activities of the regular school year through a thoroughly organized Summer Playground plan under the leadership of competent directors and assistants was assured by the wonderful showing made by these activities last summer.

7. A thoroughgoing health program within the schools with follow-up work by school nurses and the Director of Health and Hygiene. Upon requests from parents about 2000 children have been given the Schick Test during the year. This was a responsibility assumed by the new Department of Health and Hygiene from the Board of Health and gladly carried on by the new department.

8. A new augmented janitor system employing women assistants to continually clean the buildings has been adopted for the seven large buildings, namely: Abraham Lincoln, John

B. DeValles, Charles S. Ashley, Clarence A. Cook, Betsey B. Winslow, Mt. Pleasant and Emery Street. Spread of epidemics within these buildings has not occurred. Authorities on the subject say this is the best way to keep buildings sanitary.

9. Education Week was observed in the schools and many parents visited the schools to see the regular work, to gain a first hand knowledge and interest, and to pledge their support or to give constructive suggestions.

AGE—GRADE PROBLEMS.

The biggest Educational problem that confronts us in our school system is the problem of retardation. In the accompanying Age-Grade Table, this biggest Educational burden of retardation within our schools is plainly and graphically shown. I believe that some of the remedies already prescribed and many that can be ascertained through scientific procedure will eventually redistribute the accelerated pupils (below the stairs) and the retarded (above the stairs) so that we shall have an even distribution with the largest number of pupils within the stairs.

The average percent of retardation in the country is about 20% whereas it is about 39% in our schools. The average percent of acceleration in our schools is about 1% whereas the average is about 10% throughout the country.

The danger of retardation is to be found in the fact that pupils become old for their grade. A pupil who is old for his grade is compelled to associate with pupils of younger age and is likely to become discouraged and ashamed and leave school as soon as the compulsory age limit is reached, whether or not he has completed the work of the elementary school. In addition there is the difficulty in instruction which comes from having pupils of greatly different ages in the same grade. It is to the advantage of every community and to society in general to have pupils make at least as nearly normal progress as possible through the grades of the school.

This means that every precaution should be taken to prevent children from missing school on account of sickness. Conditions in the home and in the school, the clothing of children,

their food, and everything concerning their physical welfare should be given constant and intelligent attention. The work of each individual pupil should be watched carefully both by the teacher and parents, and at the first indication of the pupil's falling behind in his work special attention should be given to him, both in the school and in the home. Every effort of the school people, and every requirement on their part which is calculated to prevent a pupil's failing should receive the sympathy and assistance of the parents.

Any plan which may be developed in the school to permit pupils of unusual ability to do an amount of work consistent with that ability should be encouraged by the patrons of the school. It is perhaps a greater tragedy for an unusually bright pupil to be allowed to idle away his time and not to be put in a position where he is compelled to work up somewhere near the limit of his capacity, than it is for a dull pupil to be compelled to overwork in order to keep up with his grade.

In conclusion I desire to say that a school department is always confronted with vital problems of urgent nature. It is necessary to try to solve all problems in the order of their necessity. Each department of work has its problems to which the above rule applies. With an eye to the magnitude of the urgency of the problems, as well as keeping within conservative bounds, we are on a fair road to accomplish our aims and plans by concerted action.

(Signed) TRUE C. MORRILL,
Superintendent of Schools.

Report of Assistant Superintendent of Elementary Schools.

Mr. True C. Morrill, Superintendent of Schools:

Dear Sir:—In accordance with your request I herewith present the sixteenth annual report of the assistant superintendent of elementary schools.

This report deals mainly with the results of a study made along lines of inquiry opened up through Dr. Frank E. Spaulding's recommendations in connection with the survey of our school system. In his conferences Dr. Spaulding emphasized the value of intensive local study of conditions indicated by his "program of improvement."

RESULTS OF THE STUDY OF THE SURVEY.

These lines of inquiry were directed by the following questions:—1. What items in the program of improvement are applicable to the elementary grades? 2. What causes have produced the results reported? 3. To what extent does the responsibility for these results rest upon the teaching and supervising corps of the elementary schools? 4. What steps should be taken to secure the improvement needed? 5. What progress in improvement is being made?

A study of the items of the program showed that only one of the items recommended came within the province of the elementary grade corps, (Item VIII, p. 22, Report of the Survey) all the others being items of departmental administra-

tion or community support. This item (Item VIII) is subdivided into seven topics, five of which are clearly matters outside the province of the grade worker, and one of the remaining two must depend upon enlarged facilities for housing and seating pupils before it can be carried into effect. The one item of needed improvement which appears to lie wholly within the schools is the recommendation that "More rapid progress of older children through the grades be secured."

Recognizing that the rate of retardation in this city was relatively high the study of this retardation was directed along the following lines:—What are some of the general causes of retardation? What specific causes have influenced retardation here? In which grades and schools in this city is retardation greatest? What steps can be taken to reduce our retardation? What progress is being made?

OVERAGE, RETARDATION, SLOW RATE OF PROGRESS.

The voluminous data gathered during the survey furnished an individual record for every child in the elementary grades throughout his entire school course in this city. When these individual records of retarded pupils were studied one of the first of the facts clearly revealed was that, due to late entrance, many of the overage pupils who were grouped as retarded had actually made much more rapid progress than pupils of normal age, some having completed five or six grades in from three to four years. Another fact disclosed was that non-promotion after entering school was not an excessive factor in retardation here. While the grade-age index is the only retardation index available at present and furnishes valuable data upon which to base investigations yet it is true that overage is not a wholly trustworthy evidence of slow rate of progress, and this is specially applicable to school systems which draw a large proportion of their enrollment from non-English speaking homes or from the homes of recent immigrants.

CAUSES OF OVERAGE.

The general causes which produce overage in any school system may be divided into two groups:—I. Causes over which the teaching and supervising force have little or no control. II. Causes within the control of the schools. In the first group will be found (a.) those which deal with working conditions such as insufficient accommodations, large classes, overloaded workers, etc., and (b.) those which deal with the individual pupil, such as late entrance, lack of ability to speak English, lack of intelligence, poor health, poor home environment, frequent transfer, etc. The second group—causes within the control of the schools—may include courses of study, methods of teaching or of discipline, standards and requirements for promotion, and other forms of school administration directed by supervisors, principals, and teachers.

CROWDED CONDITIONS.

There can be no question that crowded conditions have exerted and still continue to exert an influence upon our problem of overage. The opening of the new buildings in September furnished some relief but there are still twenty-four portable schoolhouses in use, forty-two classes are on "shift" time, and eleven classes are seated in auditoriums, basement rooms, small recitation rooms, and other quarters not intended for classroom use. Dr. Spaulding placed much emphasis upon the effect which these crowded conditions exert upon retardation and he states clearly that improvement in our school system cannot be hoped for while these conditions continue here.

"SHIFT" CLASSES.

It has been argued that "shift" classes are an adequate solution of the problem of insufficient accommodation and that the longer use of the school plant each day is advantageous. This argument fails to recognize the fact that no child should be required to spend the school day and the school year in a seat too high or too low for him or at a desk too large or too

small for his use. No schoolroom with furniture adjusted to the individual needs of one group of pupils can properly serve another group of individuals in alternating shifts throughout the four sessions of the shift-time day, and at times small children in these classes must sit in seats too high for them or large children must work at desks which cramp and restrict their activity.

LATE ENTRANCE AND AGE OF ADMISSION.

In a comparison of the grade-ages of the school children of New Bedford with two neighboring cities of Massachusetts Dr. Spaulding states, "Comparatively late entrance unquestionably handicaps New Bedford children from the start", and he urges the desirability of lowering the age of admission, but he states that "This increased enrollment, which in the interest of the best education of the children of the city ought to be made at once, is quite impossible with the present school plant." (p. 117, Report of the Survey.)

In addition to the handicap imposed by the age of admission which applies to all pupils, a more potent influence is exerted when in individual cases the age of admission to any school is delayed much beyond the legal age of seven years. Since New Bedford is a port of entry for foreign countries it not infrequently happens that the lower grades contain many foreign-born pupils who were from eight to twelve years old before they entered any school. The influence exerted by late entrance due to this cause may be studied in Tables XXIII—XXVII, pp. 172-181, Report of the Survey. In passing attention may be called to the fact that these tables are not intended to show the relative rate of retardation here. Fifty children of each half-year of age were selected at random from the thousands of pupils in these grades, the idea being that five hundred pupils in each half-grade would furnish adequate material for a search for causes of retardation. Of the retarded pupils more than one year overage 27% were overage when they first entered any school, of those more than two years retarded 41% were

overage when entering any school, and of those still more retarded 42% were overage when first entering school.

LACK OF ABILITY TO SPEAK ENGLISH ON ENTERING SCHOOL.

In these same overage groups the percentages of pupils who spoke English poorly or not at all on entering school are 52%, 40%, and 63% for grade 6B, and 53%, 57%, and 60% in 6A. On page 116 of the Report of the Survey Dr. Spaulding reports that "The native language of 70% of New Bedford school children is some language other than English."

Undoubtedly ability to understand and to express in the English tongue is responsible for much of the steady gain in the achievement scores in successive grades shown in the results of the tests given during the survey. In grades III and IV a test in silent reading was given and in grades V-VIII achievement tests and intelligence tests were used.

In the achievement tests in grades VII and VIII fifty-one classes were examined. Fifty of these classes surpassed the national median score for their grade, while one class fell just below the national median score. Of these fifty classes surpassing the national median score for their grade thirty-four classes surpassed this median score by from twenty-five to fifty percent.

In these same tests in grades V and VI eighty-four classes were examined. Seventy-three of these classes reached or surpassed the national median score for their grade, nine classes fell just below the national median score, and two classes fell much below the national median score for the grade.

In the silent reading test in grades III and IV one hundred six classes were examined. Thirty-five of these reached or surpassed the national median score for their grade, twenty-four classes fell just below the national median score, while forty-seven classes fell much below the national median score.

Looked at from the negative side it will be seen that lack of ability to understand English, which naturally is more prevalent

in the lower grades, corresponds closely with the failure to approach the national median scores. The following table shows this correspondence.

TABLE I.
COMPARISON OF NATIONAL MEDIAN SCORES
AND SCORES REACHED IN TESTS
GIVEN IN THE NEW BEDFORD SURVEY.

GRADES	3B	3A	4B	4A	5B	5A	6B	6A	7B	7A	8B	8A	Totals
No. of classes examined	29	27	26	25	19	23	23	19	16	14	11	10	242
No. of classes surpassing nat. med. score	1	1	4	11	15	22	15	17	16	14	10	10	136
No. of classes just reaching nat. med. score	2	4	5	8	1	1	1	1	0	0	0	0	23
No. of classes but little below nat. med. score	4	11	6	4	3	0	5	1	0	0	1	0	35
No. of classes failing to approach nat. med. score	22	11	11	2	0	0	2	0	0	0	0	0	48

Of the 242 classes examined 57% surpassed the national median score for the grade, an additional 9% reached this score and 14% stood but little below it, while but 20% fell much below

the national median score, only one-twelfth of these being above grade III.

Of the pupils taking the silent reading test in grade IIIB, the percentages from non-English speaking homes are as follows:—Lowest quartile, from 3% to 33% with an average of 19%; middle half, from 42% to 81% with an average of 61%; highest quartile, from 84% to 100% with an average of 93%.

The high score reached in the achievement test and the high rate of retardation in our schools might suggest the inference that these retarded pupils had furnished the high scores. A study of the individual scores of all overage pupils taking the test in grades V and VI and the high scores of pupils of normal age in these grades, showed that in each class the highest scores were generally reached by pupils of normal age or by accelerated pupils and that the scores of the children in the overage group were usually found below the median score of the class and frequently were the lowest scores reported. On the other hand some retarded pupils surprised their teachers and principals by reaching unexpectedly high scores. In such cases teachers were asked to list the pupils for further testing and possible double promotion.

LACK OF INTELLIGENCE.

The percentage of overage pupils failing to reach the national median intelligence score in the intelligence tests given in the survey will furnish some basis for judging to what extent this factor may influence retardation here. Of the 3205 pupils taking the intelligence test in grades V and VI there were 1045 pupils more than one year overage for their grade. Of these overage pupils 298, or 26%, failed to reach the national median intelligence score for this test, (Chapman's Oral Intelligence Test.)

These various causes of retardation, i. e., crowded conditions, late admission to the kindergarten and first grade classes, late entrance of individual pupils, lack of knowledge of English, and the undeveloped type of mind which these other causes help to produce, are not under the control of the teacher or principal.

But Dr. Spaulding has pointed out measures which school boards may adopt to greatly reduce the harmful influence of these causes.

CAUSES WITHIN THE CONTROL OF THE SCHOOLS.

During the progress of the survey Dr. Spaulding closely investigated the course of study, subject-matter and methods of teaching outlined for the grades, and methods of supervision and administration as they affected the testing and promotion of pupils. In oral reports made during the conferences he stated that the course of study is a live and progressive course, well adapted to meet the needs of the pupils, that in the methods of teaching and discipline which he had observed in the classrooms he had seen only good work and had no reason to think that more extended observation would change this opinion and that consequently he would suggest no program of improvement along any of these lines. Under the topic of supervision he called attention to the fact that close supervision of teachers and methods was less needed here than close supervision of pupils, a form of supervision which, owing to the nature of the work, only principals could furnish, each in his own school. In his opinion the supervisory work of the superintendent and assistant superintendent should be mainly with the principals and the latter should be responsible for the work in the schools. The chief item of improvement desired for the elementary grades, the more rapid progress of overage pupils, would be secured through closer study of individual cases by principal and teacher, combined with the removal of the other handicaps over which teacher and principal have no control. The fact that teachers and principals are hampered in giving this individual study under the present conditions of large classes and lack of clerical assistance for principals should not be overlooked.

GRADES IN WHICH RETARDATION IS GREATEST.

In a manufacturing city the highest percentages of overage will usually be found in the grades just before the completion

of the requirements necessary to secure an employment certificate, i. e., grades V and VI. The effect of the passage of the new law regarding the age of compulsory school attendance in Massachusetts two years ago has further increased the large number of fourteen and fifteen year old pupils in these grades. In most cases these children had expected to go to work on reaching the age of fourteen years because they had already completed the work of grade IV and under the previous law would be entitled to a work certificate. Many of these children will profit by their longer stay in school and the average level of knowledge and culture in our future citizens will be lifted a little through this law.

Yet many of these children, intelligent enough for all the practical purposes of daily living, fail to grasp the more difficult work of these grades, however diligently they may apply themselves. The various causes tending toward retardation have produced their results through no fault of the child or of his teachers. In addition to the many earnest boys and girls who are struggling unsuccessfully with work beyond their comprehension there are not a few pupils who in bodily stature and in social reactions have passed beyond the age of tutelage and are entitled to opportunities and work which these grades cannot furnish.

These pupils need workshop classes based upon the continuation school plan but adapted to the slower intelligence of pupils who cannot accomplish the work of grades V and VI. In a city having a large foreign population with many pupils entering school too late to complete the work of the grades in the required time or with intelligence too low to grasp it no marked lessening of overage can be accomplished until some such provision is made for these children and youth.

These workshop classes are still more urgently needed by another group of children, subnormal or border-line cases, pupils who have been tested in the mental clinics conducted by the state and are not recommended for admission to the special classes for exceptional children because these classes fail to serve their need as definitely as grade classes do. The experts

in charge of these clinics usually recommend that children twelve years old and over, border-line cases and those with mentality but little below normal should remain in the grade until workshop classes are provided. Dr. Fernald, Superintendent of the State School at Waverly, strongly urges the establishment of these classes and has made valuable suggestions concerning methods of conducting them.

The opening of these two grades of work-shop classes would not only solve the most difficult part of the problem of retardation in our schools but it would be a very progressive step in public school administration. Without such training these children must continue to struggle under a sense of failure, of isolation in an environment far too young for them, and with unused powers and energies calling for exercise. With this training these children have an opportunity to develop into good citizens, good workers, good home-makers, and might become happy, useful, and successful instead of unhappy, antagonistic, discouraged, and bound by the habit of failure.

PROGRESS MADE.

In commenting on the high intelligence scores reached by some of the overage pupils in grades V and VI Dr. Spaulding pointed out to the teachers that not infrequently overage pupils with high intelligence scores could be promoted to a higher grade, even if their achievement scores were much lower than their intelligence scores, and would usually rank no lower in achievement in this new grade than in the grade below. He recommended a generous promotion of all overage pupils whose score in these tests reached the median score of the higher grade. The January promotions occurred while the survey was in progress and Dr. Spaulding inspected the reports of these promotions to find to what extent double promotions had been granted to overage children. He strongly disapproved of a tendency noted to give double promotion to the precocious child of normal age or younger who had ranked high in the tests and stated emphatically that such children should not be

accelerated unless their physical and social maturity was equal to their mental progress, claiming that it was as unfortunate for a younger child to be associated with pupils more advanced than he in point of view and physical capacity as it was unfortunate for an older child to be placed with children much younger than himself.

Some schools gave double promotions generously to overage children and report that the pupils' work in the next term justified their promotion. Other schools were ready to promote as generously but found no room for these pupils in the grades above, the classes there already enrolling more than fifty children. In some cases intelligent and interested parents declined to sanction double promotion for their children, and in other cases considerations of health, outside interests, and other factors made double promotion undesirable for children who might be doing brilliant work. As other handicaps are removed out-of-course promotion will become more frequent because teachers and principals will be able to administer it with better promise of success. During the coming year this subject will be kept prominently in mind.

CONCLUSION.

When the proposal to conduct a survey of the schools of the city was made, the plan met with a cordial reception from every department in the school system, and in his report Dr. Spaulding expresses his "unbounded appreciation of the willing, the enthusiastic, and the highly efficient co-operation" he met here. It was, naturally, a disappointment to many workers in the school system that the contract with Dr. Spaulding did not include a report of the good points of the system, that, in fact, this contract precluded any report of good points, but they recognize the constructive nature of the criticism found in the report of the survey, criticism which points out the mistakes of the past but also outlines present aims and directs future efforts.

New Bedford is a city of workers, engaged chiefly in an industry which calls for skill of hand and eye. The elementary

schools of New Bedford have consciously striven to train eye and hand to express the worker's thought not only accurately but with a view to nicety and beauty in appearance and arrangement as well as to standards in scholarship. Adult workers trained in these schools have expressed their appreciation of the value of this training and of its influence upon skill in later years.

It is possible that the desire to maintain high standards has increased the natural tendency toward retardation in a city like ours. But our course of study has also been planned to meet the needs of children who must leave school early and while a large proportion of our pupils are found in the lower grades it is questioned whether many manufacturing cities give in the lower grades as broad a training in the knowledge and skill needed for future usefulness as is given here.

Are not our schools being judged by their defects alone, without regard to the causes which produced these results? Are they not entitled to a fair-minded estimate of work based upon merits as well as upon defects? The schools deserve the confidence of the community. They have a claim upon its interest, its acquaintance with their work, and its constructive criticism. A belief that the community intends to deal fairly with its schools is the greatest asset of any school system and the best promise of its future success.

Respectfully submitted,

JOSEPHINE B. STUART.

Report of Director of Continuation Schools.

Mr. True C. Morrill, Superintendent of Schools:

Dear Sir:—My report for the year ending December 31, 1922, follows:—

The needs of its pupils has been the determining factor in the development of the continuation school. This has meant the establishing of as strong a contact as possible with the pupils both inside and outside school; it has meant knowing the boys and girls and through that knowledge gradually building several courses designed to provide opportunity for the employed minor 14 to 16 years of age. Courses have been established as soon as the need was apparent and the facilities were at hand.

ENROLLMENT.

	Boys	Girls	Total
December 23, 1921,	592	695	1287
December 22, 1922,	691	739	1430
Increase,	99	44	143

The enrollment Dec. 22, 1922 was distributed as follows:—

Boys		Girls	
Machine.	234	Sewing.	441
Electrical.	217	Cooking.	142
Woodworking,	212	Millinery.	72
Commercial,	16	Commercial,	79
20-hour,	12	20-hour,	5
Total,	691	Total,	739

HOUSING.

The girls have greatly appreciated their change of quarters from basement rooms to the Sylvia A. Howland School. A cooking room, two sewing rooms and one room for related and

academic work have been provided there. One basement room in the Abraham Lincoln School and one in the R. C. Ingraham School are still in use. These two rooms should be abandoned as soon as more suitable quarters can be secured.

It would seem that the boys are destined to remain for some time to come in the frame buildings which they now occupy. More shop space is needed and could be supplied by an addition to the west of each building.

NEW COURSES.

Early in 1921 pupils, especially grammar school graduates, requested an opportunity to take up commercial work. The High School equipment was placed at the disposal of the school. Two classes were organized. The numbers have increased until at the present time there are 5 classes of girls, one for each afternoon of the week, and one class of boys, which meets Tuesdays. A further increase is contemplated and at an early date it is expected there will be seven or eight classes in this line of work. Some of the pupils, already engaged in clerical work, have benefitted by this course of instruction; others have entered the occupation after taking the course.

Millinery has been added to the courses offered in the home-making department. Girls have not only made hats for themselves but in many instances for relatives and friends.

During the first year of the school's existence conditions in industry were unstable. The number of minors 14 to 16 years of age temporarily out of employment was so large that facilities were lacking to accommodate them. Other large cities had the same experience.

In Sept. 1921 20-hour classes for these minors were established. The girls have had home-making work on a larger scale than they could handle in their 4 regular hours. The boys have had try-outs in all the shops.

When a pupil has left school to enter industry he should be at work or return to the regulation school. The chief concern of the out-of-work pupil is to get another job. His

sojourn in the 20 hour class is temporary. Through follow-up work the school has endeavored to make a contact with industry and be in a position to recommend pupils to fill vacancies as they occur. Several pupils have secured employment in this way. If a pupil is unwilling or unable to secure employment his return to the regulation school has been recommended unless for some special reason he had better remain in the continuation school.

Plans have already been made to begin in February 1923 a course in home nursing and child welfare for the girls. This course has been recommended by the state department the last two years but provision for it could not be made at an earlier date.

Laundry work has been done as well as conditions would permit, in connection with cookery. Recently the basement room in the S. A. Howland School was equipped for this purpose and will be in use as soon as a necessary partition is erected.

Many girls have the care of the home on their shoulders. At times it has been desirable that the teachers go into the homes and there give individual help in home-making. This service has been cheerfully performed.

OUTSIDE ACTIVITIES.

Two years ago the compulsory continuation school made its appearance in Massachusetts. The prevailing question at that time was: "What can you hope to accomplish in 4 hours of schooling per week?" The answer to that question as propounded in action by the boys and girls of New Bedford has been far and beyond anything that the most hopeful dared suggest at that time.

It has not been a question of how much can be done in 4 hours. It is rather how much influence can be exerted in 4 hours and "follow up" that the pupil may find for himself opportunity to do what he otherwise would not do; and opportunity to become what he would not become without it.

Acting on this principle continuation school clubs have sprung up north and south. The girls have had "gym" classes in the evening, have organized an orchestra, baseball, bowling and basketball teams, have held whist parties, dances, minstrel shows and picnics. At the present time the "gym" classes meet in the High School gymnasium every Wednesday evening under the direction of Miss Elva M. Parker. Every Friday evening in the Howland School groups meet for such work as knitting, crocheting, wax and woven bead work, basketry, embroidery and drawn work.

The boys have formed baseball, soccer and basketball teams; entertainments have been held; an orchestra has been organized; once a week the South End boys have met at the Community Center in the Donaghy School; the North End boys have the use of the Mt. Pleasant School gymnasium Wednesday evenings.

A school paper was issued by the Boys' South School last year. It was so successful that in the future it will be taken up by the entire school.

These activities are all voluntary on the part of the pupils and have grown out of their own desires fostered by the teachers who give generously of their time and energy.

In addition the following is worthy of note as indicating the influence of the school:—

	Boys	Girls
Number of pupils returned to regulation school,	8	10
Number of pupils sent to Vocational School—day,	3	4
Number of pupils entering Commercial School,	4	2
Number of pupils entering Evening High School,	21	106
Number of pupils entering Evening Vocational,	21	87
Number of pupils entering Evening Textile,	42	8
Number of pupils entering Evening Elementary	73	120
Number of pupils entering Other Evening Schools,		12
Number of pupils taking Correspondence Courses,	5	2
	<hr/> 177	<hr/> 351

Pupils have continued in the school beyond the compulsory age of 16.

Out-of-town pupils who have ceased their employment in New Bedford have requested the privilege of attending the

school and where this has been authorized by the town of residence permission has been granted.

Home permit girls have attended more than the required time.

EXHIBIT.

In March 1922, an exhibit was held in the Howland School which reflected credit on the many pupils whose work was shown.

CERTIFICATION.

Pupils early experienced a desire for something to show for the time spent and work done. Certificates have been granted to those pupils who have done satisfactory work and who have attended at least 100 hours.

It is planned hereafter to present these certificates, with appropriate exercises, twice a year, once in February and again in June.

REIMBURSEMENT.

Based on approval by the State Authorities the city of New Bedford has received this past year \$2,426.46 from the Smith-Hughes Funds to be applied to teachers' salaries in Continuation School.

Based on the same approval the State reimbursed the city to the extent of \$33,689.38.

As provided by Acts of 1922 the Commissioner of Education has notified the School Department that a tuition rate of 30 cents per hour of service is approved and effective September 1922 for non-resident pupils attending the New Bedford Continuation School. Last year the school contributed 14,982 hours of service to non-resident pupils.

PROFESSIONAL IMPROVEMENT.

Dr. Brewer of Harvard held a conference with Continuation School Teachers in New Bedford last year on the subject of Vocational Guidance.

Mr. John I. Lusk of the State Department conducted a series of lectures on Related Work for men teachers.

February 9, 1923, Dr. George E. Dawson, Director of the Psychological Laboratory, Springfield, Mass., is scheduled to lead a conference on the subject of Tests and their use in Continuation School. This meeting will be held in the Howland School.

Early in 1923, Miss French of the State Department, will give a series of lectures on Recreational Activities for girls.

In addition to the above every teacher in this school has fulfilled the State requirement that some Professional Improvement work be done each year.

CONCLUSION.

Too much credit cannot be given teachers and pupils whose labors have placed the school in the position it occupies today.

The school appreciates the co-operation which industry has accorded and is grateful to all who in any way have contributed to whatever success it has attained.

Respectfully submitted,

EDWARD T. N. SADLER,
Director Continuation Schools.

Report of Director of Americanization Work.

Mr. True C. Morrill, Superintendent of Schools:

Dear Sir:—The fall of 1920 marked the beginning of organized Americanization work in the New Bedford School Department. Consequently, the report of 1920 could contain scarcely more than the hopes and prospects for this department.

Since there was no regular school report in 1921, on account of Dr. Spaulding's survey, it seems almost imperative to speak briefly of the work of that year. That work formed the foundation of future developments, and upon the stability of that foundation depends the value and success of the department of today and tomorrow.

BRIEF SUMMARY OF ACCOMPLISHMENTS IN AMERICANIZATION DEPARTMENT FOR 1921.

1. Classes were organized in mills, clubs, and churches.
2. Teachers were trained, all employed being either day school teachers, or those who had taken the University Extension Course of "Methods in Teaching English to Adult Immigrants."
3. State material—themes for beginners and intermediates—was provided for adult classes, and city provided same for minors, with these effects:—
 1. Teacher could spend more time in preparation of "how to teach," instead of "what to teach."
 2. Organized and standardized material furnished basis of grading which was adopted throughout the city.

3. An enrolment card system, similar to the one in day school, was started for two reasons:—
 1. That pupils once enrolled in any class might be followed up till the school could no longer serve their needs.
 2. That the evening schools might be institutions worthy of recognition, because of their definite organization.
4. Americans, old and new, became acquainted with the purpose, the principles, and the workings of this department, realized the necessity of co-operation to allow it to function to the best advantage to all, and acted accordingly.

The reputation of the work of 1921 bid fair the promise of the work for 1922. It is a pleasure to submit the following report, somewhat statistical, that you may see, at a glance, where classes of adult immigrants are being held, and the number that are being reached.

EVENING SCHOOLS.

Total,	<hr/> 511

It has been said by State authority that no city in the U. S. A. could compare favorably with New Bedford as to the number of so-called factory classes and the enrolment therein. How has such an enviable record been made possible? Manufacturers in New Bedford, by virtue of their position, recognized their privilege and duty as citizens to promote opportunities for establishing a common language and a common citizenship. Personally, and through their corps of assistants, among whom the overseers deserve special mention, they co-operated with the school department and made possible the following report.

FACTORY CLASSES.

Total,	<hr/> 933

Citizenship work has probably made more marked development in the Americanization program than any other type of work. Citizenship classes are conducted in accordance with the agreement arrived at between the Division of University Extension and the Federal Bureau of Naturalization, New England Division.

A typical citizenship class is made up of men and women who can speak, read, and write English, and who have petitioned for second papers. The course of study for the citizenship class comprises thirty lessons. It is designed to make good, intelligent citizens. It presents three series of lessons intended to answer these three questions.

1. What is our American Democracy?
2. How did it come to be?
3. How does it work and serve?

At the completion of the course, an examiner from the Federal Bureau of Naturalization is sent to conduct the final examination required by the Federal Bureau of Naturalization for admission to citizenship.

In co-operation with the Bureau of Immigration, citizenship classes are recruited twice a year, in September and in January, that petitioners may prepare for the final court hearings, held in New Bedford in December and June. From no such citizenship classes in 1920, to seven classes in 1922 with more than 200 in attendance, is one of the natural outgrowths of the Americanization work.

ELEMENTARY EVENING SCHOOLS.

With the exception of Boston, New Bedford has more boys and girls between the ages of 16 and 21 in its evening school classes than any other city in Massachusetts. The reason for their being in New Bedford is obvious. The reason for their being in school is twofold:

1. The strict observance of the Massachusetts law regarding school attendance of so-called illiterates, by employers; and
2. Efficient follow-up work, by the attendance officers in the school department.

The boys and girls in these compulsory attendance classes are the future men and women of New Bedford. Their instruction is no less important than that of the adults, and is so regarded today. The principals of the five large evening schools

have an assistant this year for the first time. The chief work of the assistant is to see that the classes are, and keep, properly graded. The individual pupil is promoted or demoted whenever his ability so indicates and warrants. Every pupil and every class is tested at least once during the term.

The enrolment of the minors in the evening schools is as follows: Lincoln, 366; Ingraham, 346; Knowlton, 335; DeValles, 213; Parker, 89; Allen F. Wood, 9.

The discipline problem so common in compulsory attendance classes is fast disappearing from the New Bedford evening schools. Its disappearance may be attributed to three causes:

1. Properly trained teachers.
2. Adoption of proper material for instruction.
3. Careful grading.

It is to be hoped that the instruction will be so satisfactory, and the value of an education and the opportunities for getting one will be so evident, in these compulsory attendance classes, that 21 years of age will not be interpreted as the time to leave school, but simply will indicate the age when one attends school voluntarily.

Many boys and girls have been obliged, by home conditions, to leave school as soon as the law allowed. Some found they were not eligible for positions to which they aspired, because they did not possess a grammar school certificate. Two hundred twenty-one boys and girls, deprived by necessity of a grammar school education, welcomed the organization in the evening schools of grammar grades. These classes are held at the Lincoln, Knowlton, Parker and DeValles evening schools, and four rooms, where departmental work has been organized, have been opened at the Donaghy School.

A course of study was devised to cover the work of grades 7 and 8 in four evening school terms. Arithmetic, English, History, and Geography were the main subjects provided for. A grammar evening school certificate is to be awarded for the satisfactory completion of the work of grade 8A. Probably

45 such certificates will be awarded at the close of this evening school term. This department has a future.

CONCLUSION.

The School Committee, the superintendents, and especially the former director of this department, by their interest, encouragement, support and advice, have helped immeasurably to make the types of education referred to in this report, grow and succeed. In the final analysis, however, upon the assistant supervisor, the evening school principals, and the teachers in all the classes, rested the responsibility for improving standards and maintaining interest and attendance, and to them is due special commendation for the achievements of the department.

The Americanization department is organized, and the work has begun. A city within whose confines there is one common language and one citizenship, must ever be our goal. Thus, can we, by promoting the progress of this department, further the aims of our democracy.

Respectfully yours,

JOSEPHINE SHANAHAN,
Director of Americanization.

Report of the Supervisor of Drawing.

Mr. True C. Morrill, Superintendent of Schools:

Dear Sir:—Following is submitted a report of the work of the Drawing Department.

A lecturer recently addressing the Teacher's Association furnished a possible theme for the drawing teacher's outlines,—“All we do by way of general education is done for the sake of giving the individual an understanding of himself and his world. . . . Let the pupil see through the subject as much of the world as the subject may show using it as a glass to see through.” What interpretation of the world and himself can the pupil obtain through the medium of drawing and art study? Much might be written; briefly it might be stated—he may learn to appreciate the beautiful and to translate it into terms of use. Art should enter into the life of the people and unless it does so has little meaning, effect or influence. The School is a small world; it is our world while we are within its walls. Does school art function in school life? Further, can it go beyond the walls of the schoolroom and play a part in the wider life outside?

Since the publication of the last report of the drawing department the children have had numerous opportunities for making their school drawing of service to the community.

There was the sale of work of the blind for which pupils of the upper grades and High School contributed posters which were placed in windows of shops in different parts of the city. The Director of the Division for the Blind, Massachusetts Board of Education, sent an appreciative letter thanking the children for their interest and co-operation. There was also Health Week, when the New Bedford Woman's Club instituted a health poster contest to which there was such enthusi-

astic response that the Woman's Club generously gave special prizes for the work of the elementary school children.

The Ingraham School held a bazaar for which the departments of music, cooking, sewing and physical training co-operated with the drawing department and from the proceeds were bought books of reference, some beautiful pottery for drawing models, while a sum of money was added to the music fund. The Parker Street School also has purchased from its entertainment fund a fine collection of pottery, delightful in color and form, for drawing models.

Similar activities continue. At the time of writing school plays and pageants are preparing and a Christmas bazaar is being held. A class has made tiles and book-ends in colored cement and flower boxes for the schoolroom windows. Another class has a set of encyclopedias for which a rack or shelf is needed; with the combined efforts of the manual training and drawing departments it is expected to construct this. In another school some boys have been lettering signs. This having been done outside sessions has taken no time from studies, is a practical application of school work and a recognition of its usefulness outside. Another instance which might be mentioned is that of a primary school boy who duplicated and sold the toys he made in his drawing class. Many of the children are illustrating in poster form the teachings of the Health Department.

In June Miss Edith H. Rowe, after four years of efficient service, resigned from the department and Miss Blodwen L. Williams, a graduate of Pratt Institute, was appointed.

Last year, owing to the increase in the number of part time classes and consequent limitation of time, drawing was often omitted, the result showing a noticeable falling off in the quality of the work of pupils who had been in the part time classes. This year time is to be allowed and the supervisors have arranged to give special attention to these classes.

Born in every soul is the desire to "make things". Dear to every child is the delight of making pictures. A librarian told the writer that children coming for books often asked,—“Are

there any pictures in the book?" This inherent love of picture making may be utilized in vivifying history, literature and geography. In making an illustrated booklet or a scene for a puppet theatre or in dramatizing a school play comes the consideration of what scenes shall be chosen, what characters represented, how they shall be dressed, in what surroundings placed—all this leads to imagining and visualizing events and scenes with greater keenness and gives them reality. Children love to draw people, animals, living things. Time was when the discovery of a drawing of "Teacher" made in school by a pupil was occasion for reproof but recently in a grammar school class such a drawing found by a teacher was shown to the class and the evident likeness favorably commented upon; instead of a reprimand the youthful portraitist received encouragement.

We learn to draw by drawing and with practice comes skill. Certain principles are necessary to be taught but they are few for each grade and simple. An outline of the term's work is helpful, that to each year may be apportioned its share of accomplishment but the manner of teaching, of carrying out the work outlined may be varied according to the needs of the class. We should be quick to seize the timely interest. There is a reason for drawing a group of books when the drawing becomes a poster for Children's Book Week, or for studying the angles and disappearing edges of a pile of boxes when we are going to turn the drawing into a poster to help along the sale of Christmas seals for the prevention of tuberculosis.

Drawing should be a delight and though it has its tasks it is necessary to strive in order to obtain excellence in any art. One does not learn to play a musical instrument without continued effort, the ear and hand have to be trained. Why be more impatient about the training of eye and hand? Children should be taught to sketch—to tell the story with a few essential lines. Individuality should be encouraged and developed.

We should be able to do more in the way of art appreciation.

We talk of civic improvement. We say the children of today are the appreciators and purchasers of tomorrow. How shall we help them to distinguish good from poor, to obtain standards? We need material. The New Bedford Public Library co-operates generously with the schools by loaning photographs and color prints but should not the school have material of its own—photographs or prints, and now that so many schools are equipped with lanterns, slides illustrating fine architecture, good design in furniture and textiles, something of painting and sculpture? A small circulating library of such things could be passed from school to school.

Many classes are at work on projects of various kinds. The supervisors have a collection of reference books, photographs and a quantity of useful material at their office which is at the service of teachers.

Respectfully submitted,

(Signed) LUCY C. BEDLOW.

Report of Supervisor of Vocal Music.

Mr. True C. Morrill, Superintendent of Schools:

Dear Sir:—I take pleasure in submitting to you a report of the year's progress in this department, together with a few recommendations for further development.

The most important step forward this year, has been, without question, the introduction of the Dann Music Course in our fifth and sixth grades. This course which had been gradually introduced in the first four grades, had received the hearty approval of the teaching force, and it had become imperative to complete it through the two last grades of instruction in sight reading. We now have a uniform Course through that period which is a distinct advantage to both pupils and teachers for it furnishes an excellent choice of teaching material as well as most enjoyable songs.

Owing to the fact that we have introduced new books in the grades, more attention than usual had to be paid to the technical side of our subject and the children have gained in ability to read music. On the other hand, tone quality has suffered a little because our allotted time is too limited to permit us to attend to both equally. And, as tone quality should be our foremost consideration, we will turn our attention to it as soon as possible. We really should have ninety minutes a week to get proper results. Therefore, I respectfully request the granting of more time and of more assistance for the grade work. At least one more assistant is badly needed in this department.

The care of boys' voices during the changing period has

received the same attention as in the past few years, and we are now reaping the benefits from that particular line of work. We now have a good many boys of grammar and high school age who have a certain knowledge of how to use their voices and the number is bound to increase. I feel that this is a very important subject and I wish I could devote most of my time to it. It should be well worth while, for it is neglect through this delicate period which is the cause that so few men have good voices. I am confident that help and guidance at that time will assure a generation of good singers and speakers.

At the high school the singing classes are not as large as they have been the last few years. This is due to the change in program necessitated by the crowded conditions in that building. Although everything has been done to accommodate as many pupils as possible many have been unable to include music in their program.

Our girls' glee club now numbers about 100 voices and does high grade work. Our boys' glee club numbers about 40 voices and is a great favorite both in and out of school.

Last February both clubs combined gave a very fine concert in the auditorium. They were assisted by an excellent artist, Miss Nelda Hewitt Stevens, in American songs in costumes. The boys and girls furnished the choral music. Their work was highly commended and their services were immediately requested for the High School Alumni Annual Reunion in June. Then again, they gave great pleasure and were graciously received by the Alumni.

Our glee club work is certainly a credit to the school and a fine education for the pupils for they can graduate from there into higher organizations where more advanced works are given.

Finally I recommend again that credit be allowed to high school pupils who study music with some reputable private teacher and whose aim is to take up music as a profession. With the present requirements it is very hard to pursue serious musical studies during the high school period and I heartily recommend that credit be granted so that such pupils could drop one of the regular subjects.

I wish to voice my deep appreciation for the splendid co-operation of my assistants and of teachers in general and will terminate by assuring you, Mr. Superintendent, of my sincere regards and my gratitude for your kindly interest in the work of this department.

Respectfully yours,

(Signed) RODOLPHE GODREAU.

Report of Director of Health and Hygiene.

Mr. True C. Morrill, Superintendent of Schools:

I hand you herewith my report beginning with the first of August, 1922, when I began the organization of the Department of Health and Hygiene, in accordance with Dr. Spaulding's survey, my own title being the Director of Health and Hygiene with the rank of an Assistant Superintendent. The purpose of this department was to begin co-ordinated preventive medicine in the school by "education in health as well as health in education". An excellent foundation has already been made through the work of Miss Stuart.

At the present time, we have a small but smooth-working organization. The office work is ably handled by Miss Hamilton, who from the first has given evidence of unusual ability. A suite of offices for this department has been completed and consists of the Director's office, an examining room and a nurses' and supervisors' room. Miss Ricketson, the Supervisor of Nurses, has at all times, proved an able and absolutely satisfactory assistant. Her twelve years' experience in the work locally is a distinct asset. Five school nurses have done good work each caring for approximately 3400 children. The School Survey of the Chambers of Commerce shows that the ideal number of children for a school nurse to handle is approximately 2000. The nurses have been given definite courses of instruction by myself and attend weekly conferences for further improvement. In times of emergency, such as epidemics, the number of these conferences is increased to keep them in touch with the situation. Thoroughly trained school

nurses are scarce and it takes at least a year for an inexperienced school nurse to prove her value. For this reason, some salary scale based on time of service should be adopted for school nurses. School nursing is the most highly specialized type of public health nursing. It is expected during the coming summer that school health work will be continued as follow-up work and health teaching on the playgrounds. This will undoubtedly lessen the work in minor skin diseases which, at present, makes the school year an exceedingly busy time.

SCHOOL INSPECTION.

This is done on the sorting system, the nurses examining each child and the important cases are referred to the Director for his opinion. A cumulative health record, known as HH4, largely devised by the Massachusetts Department of Education, has been adopted. It travels with the child from room to room. Once suitably begun, this record can be carried on with a very little amount of clerical work. Its value to the teacher, as well as to the Department of Health and Hygiene, is great since it offers a solution to difficulties not otherwise clear. The annual work on the eyes and ears was completed by the first of October and its good effects are already evident.

I feel that an attempt must be made to offer a more thorough physical examination than required by law, especially upon the admission of a child to the school system since the parents and the school department may thus know what defects the child possesses and take measures to remedy them if the child is admitted. In any case, a child should have as thorough examination as permitted before admission to school. The complete physical examination was given this year to the football and soccer squads, new members of the R. O. T. C. and certain volunteers, about 750 in all. A complete examination of persons engaged in competitive athletics is almost essential if serious injuries are to be avoided.

A number of cases of minor skin diseases are constantly being discovered. We have found that unless some provision is made

for instruction in home treatment through the school department and some slight treatment provided at the schools, attendance will seriously suffer. For this reason, we have home treatment slips for pediculosis, as in previous years, and a new slip for scabies (itch) which has already proved of the greatest value. It may be necessary to introduce home treatment slips in the cases of impetigo and ringworm. We are required to exclude certain children having epilepsy or heart disease who, however, are capable of carrying on satisfactory work at home. For such children, a traveling teacher would be of the greatest assistance. At present, we have arrangements with the Family Welfare Society to care for a few such cases.

PHYSICAL EDUCATION.

This work has been affiliated with my department on the principle that with medical advice, as a result of medical findings, the teaching in this department can be more surely directed to the correction of particular defects. As a result of the examinations of a number of High School students, Mr. Ferguson is placing emphasis on exercises for the correction of flat feet and improvement of posture.

Similar emphasis is made by Miss Parker in the grades. This work is based on the findings of about 750 thorough physical examinations of children who are probably physically better than the average. The exercises for flat feet are ones of proved value in orthopedic clinics. Regarding posture work, the children are being shown easy corrective methods. Miss Parker and I expect to study thoroughly a number of children, following them with the schematograph and keeping records of the child's improvement. The work will serve as a guide to the general needs of the children. In all this work, we are attempting to correct outstanding defects existing in this particular locality and are checking results to determine the efficiency of methods used. The work could be done much more effectively with one more person added to the physical education division.

In the primary and grammar schools, physical exercises are now universally conducted out-of-doors except in unsuitable weather. In certain schools, this had already been started. Many consider this one of the most valuable changes of the year since it offers fresh air in the middle of the session, thus improving the mental activity and general health of the children. The results have been exceedingly good. Miss Parker is an enthusiastic worker and I have found her very co-operative. The coming year as planned will greatly increase the value of the work in physical education.

The State Supervisor of Physical Education, on his visit to New Bedford at my request, felt that the work was being done intelligently and that the children were being given a very good course, any local handicap being met adequately. He believes that the results will be greatly improved by the present system of working in close touch with a physician.

LABOR AND INDUSTRIES.

In connection with the Department of Labor and Industries, from August 1st to the beginning of the new year, I have examined 925 children for their employment certificates. The child is furnished with as thorough an examination as the work indicates and his general condition seems to warrant. The system adopted is considered satisfactory by the state authorities. Considerable publicity has been given throughout the country to the possible injury wrought by the employment of children of these ages. If such belief is only partly true, it is very evident that the child should be protected as far as possible by a suitable examination before beginning work. By the cumulative health record, we shall shortly be able to have a knowledge of the child's physical condition during all his school career as well as the record of the examination when he goes to work. Thus, we can better judge the suitability of the child for a definite sort of employment. The fact that the child is required to report for examination each time he changes the form of his work furnishes further opportunity for

following his general condition. The introduction of certain health work in the Continuation Schools on the basis of this general physical information is bound to give good results and when this system is well underway, the child between these ages who works in New Bedford will be given the utmost protection possible to his health and will, therefore, be of greater economic value both to himself and to his employer.

A number of children have to be turned down for certain jobs. Difficulties in eyesight are the greatest causes. More marked interest on the part of the child in securing glasses when suggested in the schools would lessen this number. Certain members of the Rotary Club have expressed a willingness to help such children get in touch with a possible employer when suitable work is available and this undoubtedly helps relieve certain hardships otherwise bound to occur. Some firms at the present time inform us of some vacancies which exist and this has been of great assistance. The number of these cases is not large but when they occur, they are usually very serious.

ANTI-TUBERCULOSIS WORK.

Through the splendid work of Mr. Geoghegan and his associates, the situation, previously very serious, is well in hand. In this task, this department has a very definite responsibility since it covers the children of school age. One of the most important steps is the weighing and measuring of each child each month and keeping an accurate record of the same, also informing the parent regarding the weight by means of the report card. The older children learn to weigh themselves. The amount of time consumed is small. Steady loss of weight is one of the most characteristic and early symptoms of the White Plague. In this connection, I have perfected arrangements with the Board of Health T. B. Clinic whereby such children as appear to need investigation and cannot secure it otherwise may have a thorough chest examination by Dr. Wise, who is a specialist in this work and the child can be followed in the clinic if need be. These examinations are made only

with the signed permission of the parents. This work has not been done as yet but will be started within the next few weeks, the reason for the delay being that this is the first year that the weighing of the children throughout the school system has been done and several months are necessary to get an idea of the child's actual need. The use of milk and lunches in some of the schools is of great advantage to under-nourished children and undoubtedly forms an important step in the TB. situation. The newly introduced out-door physical exercises, the special health teachings regarding fresh air and personal cleanliness give a fairly complete program. Beginning with the new year, the child's weight will be put on the usual card sent to the parent, the Board of Commerce Survey considering this an important asset to health work. We expect shortly to take active interest in the children who are 10% or more under normal weight. An attempt will be made to find out the reason for this and where any cause can be found, we will offer such advice as we can give to remedy it, especially in cases where instruction in dietetics and personal hygiene may be of value.

SPECIAL CLASSES.

At the present time, these consist of eyesight conservation, fresh air and classes for special mental development. Investigation in the fall to discover if there was enough material for lip-reading classes showed that the candidates were so few that it was not worth while to form such groups. There are not enough running ear cases to warrant special classes for them with facilities for suitable treatment. Such classes must be kept in mind, however.

EYESIGHT CONSERVATION CLASSES.

Miss Moore has done notable work as supervisor. The class at the Howland school is to be moved into a new and more suitably lighted room as a result of an exchange with the Continuation School and when this improvement is made, it will be under exceedingly good conditions. It is desirable to

move the eyesight class in the portable to a proper room in the building when such room can be obtained. These classes are believed to be more effective when small. Roughly they are divided into primary and grammar grades. Because of the highly specialized work necessary, an oculist has been employed to make special examinations of the children and in a few cases to offer emergency treatment. This work has been done very thoroughly and at a most moderate expense. A difficulty will arise in the near future because books for such classes are practically unobtainable. At the present time, the eyesight classes are the only special ones where there are enough places to accommodate those who need them. Local physicians are encouraged to refer their cases to these classes when they feel the necessity and such cases are considered directly under the care of the referring specialist, the examination being provided only for children who are unable to care for this matter themselves.

FRESH AIR CLASSES.

The fresh air classes are satisfactory in pedagogy only. They are located at points which, while central, are noisy and dusty, two conditions which prevent suitable rest periods and which encourage the inhalation of dust which in itself is irritant to an already damaged lung. The DeValles lot offers an ideal situation for these classes and is fairly central for the south end. Several lots in the north end would be satisfactory. Good, fresh air and quiet are essential to the success of such groups. The monitor type of building meets the requirements of these classes better than the ordinary portable, the ventilation being improved. A greater number of classes is needed in order that the standard of admission may not be as high as it is necessary at the present time. There is usually a waiting list, especially in the south end, for these classes even with this standard. In the Donaghy school, a few cots have been introduced in place of worn-out reclining chairs. The cot costs much less than a chair and is vastly more satisfactory for the needed rest. A type has been introduced which occupies very little room when

folded and serves as an individual rack for the blanket as well, the blankets being at all times kept apart and aired frequently. The relation with the Board of Health clinics in connection with these classes has been exceedingly satisfactory. The introduction of the one session day with school lunch has met the previous difficulty of the children doing work during the noon hour and frequently coming back exhausted, thus, defeating the purpose of the class.

CLASSES FOR THE UNUSUAL.

Special classes of this type are under the direction of Miss Bassett who is a trained psychologist. At the beginning of the year, there was a waiting list of about 75 children and 70 more have been discovered during the recent visit of the clinic. While new classes are constantly being introduced, the provision is still inadequate and if this type of child is ever to do justice to itself in scholastic work, more provision will have to be made. The State Traveling clinic has allowed us six weeks this year for examination of pupils as compared with four last year, but we find that even this is inadequate. In connection with the clinic work, Miss Irene Croacher proved a very valuable assistant. These classes are run on the Fernald system as far as possible but as yet, no provision has been made for the older child examined in the clinics in order to give him some sort of vocational training. Provision must be made for medical and psychiatric follow-up work of the children examined to carry out the recommendations of the state if the best results are forthcoming. The approaching introduction of mental hygiene clinics of the out-patient type in New Bedford may prove of considerable value in this connection and may also care for certain cases of habit spasm and other nervous conditions with great advantage to the child.

SCHOOL LUNCHES.

Many of the schools serve a lunch of milk and food either brought by the child from home or milk is purchased at the

school sometimes the idea being supported by a fund. Through the co-operation of Miss Keyes, Supervisor of Cooking, considerable canning of material used in the lunches of the Eyesight Conservation classes has effected great saving. It is hoped that this particular feature may be developed further. A hot lunch is of great value to the child but such ideas should be placed on a self-supporting basis when possible or else under semi-private auspices. The use of milk in the schools is of great value in combating under-nourishment and in teaching the child the use of this best of foods. This work is usually self-supporting, for example, the Sarah D. Ottiwell schools raises money through the sale of baskets. At the Ashley and Cook kindergartens, Miss Mansur has secured the co-operation of parents to give a payment of 14 cents per week to supply each child. I believe this arrangement for milk on a self-supporting basis should be eventually carried into every primary school, at least for under-weight children. This particular problem is better met by the school principal than by this department as such.

ATHLETICS.

In all athletic teams under severe competition, suitable equipment should be provided and this has been done in the case of the High School Football team. Where feasible, definite training rules should be established and thoroughly carried out. Football teams should have the services of a physician easily available. A thorough examination of all persons participating in the more vigorous sports should be carried out in spite of the considerable time this step requires.

ACCIDENTS.

Accidents are rare but First Aid kits are supplied to all schools and a member of this department is always available for such work. In this connection, the purchase of standard drugs and economical types of material will save considerable money and add to the efficiency. A report is made to this office of all accidents.

SANITARY INSPECTIONS.

In this work, an attempt is made to conflict in no way with the Department of Inspection of Buildings and it has been my custom when I met any condition, to report the matter to the head of that department for such action as he saw fit. Temperature studies are being made of each room in the school system and humidity studies will probably be made when opportunity permits. These are the 'best possible checks on the efficiency of the heating apparatus. I have found the janitors very co-operative. The Janitors' Association, through its discussions of various problems is of great value. The seating problem is inevitable owing to the necessary shifting of pupils. Principals are familiar with the state seating standards and desks have been adjusted as far as possible. Correct seats undoubtedly have no small effect on the child's posture and serious damage can be easily done if care is not taken. In regard to lighting, definite instruction in such technical matters as cross-lighting and proper use of artificial light should be given to the entire teaching force since in certain rooms, the inner seats are rather dark. Without question, the lighting problem has a serious effect on the eyesight of the pupils. Mr. Ferguson and myself have attempted at times to go over this matter with individual teachers. The introduction of liquid soap has already been provided by the Board in some schools. Hot water in all the schools would be of the greatest value. All of us are familiar with the difficulties of attempting to wash in cold water. Cleanliness is best taught under attractive conditions and this should be kept in mind in washing and toilet facilities. The sanitary situation in some buildings is essentially a budget problem. The mechanical method of cleaning erasers is highly desirable but the apparatus is rather expensive. Different arrangements for pencil sharpening, however, are necessary. The principle of individual articles for individual pupils must be rigidly carried out. Most of the problems in connection with the school buildings are definitely those of the Building Inspec-

tion Department and there is no reason why they should be treated in this report.

HEALTH TEACHING.

In the High School because of the crowded curriculum, Mr. Williams and I felt that a course of lectures on basic health problems would best meet the need of the pupils who are about to become the most important members of the community. The response to these talks has been good and I have greatly appreciated the courtesy of both the High School faculty and the students. In the coming semester, health subjects may occasionally be used in the composition courses to encourage original investigation.

In the Continuation Schools for the first time, definite health work has been attempted and the coming introduction of courses in Home Nursing and Baby Hygiene by Miss Eldredge, a very superior nurse from my department, under my personal supervision, will be of great assistance to those girls who are constantly doing this type of work in the home. It is essential that Continuation School courses be thoroughly practical.

In the primary and grammar schools, health notebooks are being kept. The notebook consists of hints covering the most essential health principles such as suitable diet, health habits and individual or group hygiene. The information is conveyed in as simple a form as is possible, thus emphasizing the few important points with a minimum of effort. In the grammar schools, after certain principles have been introduced, original work has been encouraged and great interest has been shown by the children. In the grammar schools, posters have been made in connection with the drawing courses. In the primary grades, original illustrations have been made for various points brought out. Some notebooks and posters have shown evidence of considerable ability and interest. The children are fond of this work and it is hoped that they will put the hints to practical use.

In the newspapers, more especially the Sunday editions, I

have had signed articles or interviews on school health problems. The response by the public has been very satisfactory. Recently in connection with Mr. Abbot, a High School student, a health strip known as "Johnny, the Health Kid," has been introduced in the Standard to bring out certain points pictorially. Illustrated feature articles have been run frequently. I feel the more New Bedford understands the different problems of health and the methods of meeting them, the more we shall prove the pecuniary value of a strong school health department. At the present, I feel that New Bedford is satisfied that we are trying to introduce a thoroughly efficient system at a minimum of expense. Money used in Health work is but a small part of the budget at best. Great emphasis must be made on health work in the lower grades for here there is ample time. In the kindergartens, plans are underway for special work. By the time a child reaches grammar school, we shall hope to have his health habits fairly well formed.

In connection with the teaching of physiology and hygiene, it is my hope that we shall be able to create our own course using the standard text books merely as collateral reading. This is essentially the method used in schools of higher learning. Such a method would be economical and would require the purchase of comparatively few books. It could be kept up-to-date to a greater degree than is otherwise possible. Only essential matters need be taught under these conditions.

I hope eventually, as the department develops, to have a thoroughly qualified person give practical First Aid in small sections so that the technique will be thoroughly understood.

At the present time, the training of teachers in the normal schools in school health work is improving but is, to my mind, not adequate. It is my hope that a volunteer course can be offered for such teachers as desire it, perhaps one evening a week for a few weeks, in order to acquaint them with the basic principles and around such a nucleus could be formed a thorough health system which will enable us to do exceedingly high-class work with a comparatively small personnel.

SCHICK TEST.

During the fall, the Schick Test was given to about 2000 children, some of whom were previously immunized by the Board of Health and some of whom were new. The cases immunized by the Board of Health have shown that an average of between 80 and 90 percent have been protected. This is an exceedingly good figure, a higher percent is not believed to be as good evidence of satisfactory work. The increasing incidence of diphtheria in New Bedford and the severity of certain cases makes the Schick Test and the immunization where indicated highly desirable and while certain discomfort may arise, it is small compared with the suffering or danger of an attack of diphtheria. Most children of school age will eventually have this work done voluntarily. There are still a few schools which could not be given the test before the new year because of the measles epidemic. This probably means from 500 to 1000 more tests. The work has been given considerable publicity in the newspapers and a movie demonstration was given in the Capitol Review. I feel that in this type of combatting disease, the utmost information should be supplied the public as the support is better. I consider that we should at all times be ready to give the test to any desiring it. It is hoped that local physicians will introduce this test more and more into their practise in which case, less provision will have to be made by the School Department. The test has the approval of the New Bedford medical profession, who have co-operated with us.

I believe that in the near future, a short elective course in Home Nursing is desirable for children of the grammar school grades at least and in the High School should room be possible on the curriculum. Such a course supplies a very definite need of the girl pupils who must meet it in some other way if the schools do not supply it. Short courses are being used in other cities of this size with considerable success.

RELATION TO LOCAL CLINICS.

Dental Clinics. The Board of Health Dental Clinics, in charge of Mr. Geoghegan are doing a splendid work for the

younger children. The number of children handled is large and an imperative need is met. Such work creates an interest in the younger children and it is hoped that the children of grammar school age will care for this matter themselves. I cannot praise the work too highly and I sincerely hope the funds for this work may permit it becoming even more extensive. I consider this clinic of unlimited value to the schools.

Tuberculosis Clinics. These are also under Board of Health direction. They have been used chiefly so far in connection with the Fresh Air Classes but offer great possibilities for work with many children who may be prevented from getting the disease by work done sufficiently early.

St. Luke's and City Mission Clinics. A large number of children are served by these clinics. At times there is difficulty in securing early operation for tonsil cases because of large waiting lists. The Mission, however, is prepared to increase facilities for this work. It is useless to recommend treatment to such children unless early arrangements for treatment can be made. The solution, I believe, is in a very close arrangement between the clinics and this department in order not to overcrowd at one time and have too few at another. This is now being worked out.

MEASLES EPIDEMIC.

During the month of December, starting immediately after the Thanksgiving holidays, an epidemic of measles began in the Harrington school, spreading to a less extent to the Clifford and Cedar Grove. Special arrangements were made for caring for this epidemic through the co-operation of the teachers, the turning of the entire nursing force to fighting this disease and the additions of Dr. Cody and Dr. Spiva, as well as more nurses to the force. At the time of the Christmas vacation, the epidemic was well in hand. Because of the excellence of New Bedford physicians in reporting their cases and because of the active interest of the parents in this connection and because special nurses have been employed to investigate all unexplained absences, the number of cases listed is undoubtedly large.

However, it is my feeling that a much larger percentage of cases have been reported than at certain other times. A new and satisfactory code has been drawn up in connection with the Board of Health for handling the pupils who have had the disease or who were excluded because of other cases in their homes. The schools were kept open, the belief being that the children were safer in the schools under adequate watching and the epidemic under better control under the checking system thus possible. It should be remembered that the Health Department may at any time be confronted with an epidemic with a consequent necessity of fighting it with increased forces, thus somewhat impairing the work usually carried on. There is no help for this, however.

In closing this report, I feel that this department owes much credit to you as Superintendent for the co-operation and constant interest in this work. The good results which have been obtained in the briefest sort of a time could only be made under such circumstances.

I feel that New Bedford citizens have in general approved of the advances which have been made and have certainly given evidence of interest and co-operation. Our relation to the Board of Health will always be a close one and has been, I think, mutually satisfactory. I greatly appreciate the courtesy I have received from them. I feel that at a comparatively small expense under existing conditions, I can give New Bedford a Health and Hygiene department which can be made a model for the smaller cities. It can be positively proved that money spent in such work saves much larger expenditures in caring for disease which might have been avoided by proper school health work.

Respectfully submitted,

HUGH GRANT ROWELL, M. D.

Director of Health and Hygiene.

Report of Grade Supervisor of Physical Training.

Mr. True C. Morrill, Superintendent of Schools:

I respectfully submit the following report of the Department of Physical Education.

Good health and strength is essential to happiness. With this in view, the course in physical education is planned.

A new course in folk dancing has been made out for the grammar grades. This course contains dances for the different nations, including American and English country dances. The Chamarita, one of the dances for the sixth grade, was arranged by a group of children from the George H. Dunbar school.

Special exercises for the prevention of flat foot, have been introduced in the grammar grades. They will be extended to the primary grades next term.

At the suggestion of Dr. Rowell, this fall all the physical training has been taken outside in the school yard. This has been particularly beneficial in the grammar grades as these children do not have a recess period. I believe the teachers recognize the value of this period for work in the open. Many have spoken of the added vigor and diligence of the children when they return to their class rooms.

The time allotment for physical training and recreation has been 235 minutes a week from 1B through 4B and 50 minutes from 4B through 8A. This year a little extra time has been allowed for passing in and out of the building for yard work.

In my report in 1920, I recommended a recess period for the grammar grades, and that something be done in the line of athletics. Action has already been taken regarding the athletics. May I recommend again, in this report a 20 minute recess

period every morning for the grammar grades, this time to be devoted to games and athletics. The interest of every boy and girl will be stimulated. Every child will have the opportunity to find what form of athletics he or she is best fitted for or is most interested in.

Mr. Schrader commended the enthusiasm of the primary children in their games, and their apparent knowledge of rules and spirit of fair play. Just as these children get old enough for higher forms of games and athletics, the opportunity is taken away from them.

If this time were added to the 50 minutes a week which has previously been assigned for class room work, the grammar grades would have 150 minutes compared to 235 minutes in the primary grades. This would seem a more logical comparison.

Organized recess has been developed in all of the schools since my last report. The 30 inch camp balls which have been furnished for the grammar schools, have given an opportunity for splendid exercise to large groups of children.

Aside from the regular course, we have done some very interesting work in special classes for posture. The purpose of this type of class is to meet the needs of children whose conditions call for individual attention and exercises.

Following are the most common types of poor posture found among school children.

(1) The lateral curve, which in most cases is to the left and characterized by a low right shoulder and a prominent right hip. This curve in children is generally postural, and may be corrected or arrested with proper exercises.

(2) The stoop shoulder posture is easily detected by its forward projection of the head, accompanied by a flat chest with hollows near the shoulders.

(3) Round hollow back is a very common type. Here we find an exaggerated curve in the waist region and a compensating curve in the region between the shoulder blades.

Children are admitted to the posture classes upon recom-

mendations of the doctor, nurse, teacher, physical director or upon request of the parent.

These classes average from sixteen to twenty in a class. This gives the teacher an opportunity for individual work. In the primary grades, these classes are held twice a week and in the grammar grades once a week. Cards containing the exercises are given to each child to be practiced at home.

If we are not satisfied with the results in a reasonable length of time, the parents are generally consulted and I have always found them anxious to co-operate with us on the home work.

A schematograph has been ordered for use in these classes. With this machine, an outline of the posture is recorded showing clearly any deviations from the normal. Records may be taken from time to time showing what improvement has been made. It also enables the children to see just where their posture is faulty.

The first posture class which was started in 1920 proved so successful and the results were so gratifying, it seemed advisable to extend the work as fast as possible. From September, 1921, to June, 1922, there were fourteen classes in operation. Approximately 265 children received instruction in these classes. At the end of June, 180 children had improved sufficiently to be discharged. These same children were examined this fall and I found in most cases their posture had remained good and many had continued their home exercises during the summer.

The value of preventive and corrective exercises in the developmental period of children, and the definite benefit which has followed since the organization of these classes make this work of utmost importance.

Dr. Lloyd Brown in his study of over seven hundred men at Harvard College found that only 20 percent of the group stood in a normal or nearly normal position.

Our schools are doing a great deal to improve the posture of the children. Constant attention is given to the predisposing causes which influence the posture. Seats and desks are properly adjusted for each child, study periods are short and a steady effort is made for good posture in all school subjects.

Combined with the splendid results which the teachers are accomplishing in the posture classes, I feel certain our boys and girls will leave the eighth grade with a much larger percent of good posture than was found by Dr. Brown.

Standardized tests and scales have been devised and standard scores determined, by means of which the efficiency of a class or school may be determined in the various subjects. Up to the present time, these tests and standards in physical education are still more or less experimental. Age, grade, height and weight are the factors to be considered in judging the efficiency of children.

One of the standard tests is the pull up. That is, the ability of a child to pull his chin over a bar from a straight arm hang. The child grasps the bar, hands facing away from him; arms straight and feet not touching the floor. After pulling up high enough to put his chin over the bar, he must return to first position (straight arm hang) before trying again.

This test was given to the children of the James B. Congdon school with the following results:

Times	Girls	Boys
0	246	80
1	27	58
2	10	51
3	5	45
4	1	30
5		12
6		20
7		4
8		3
9		1
10		1
No. taking test	289	305

The percent of children who were unable to pull up at least once is too large. At present, we have no apparatus in the schools on which to practice this. However, I believe, the

next test will show an improvement for the children were keenly interested in their ability or inability to do it. Many of them will find a means outside of school to practice.

With a manometer, we took the amount with which a child can grip with his hands.

The average grip for the girls was found to be:

Right hand 34

Left hand 29

The average grip for the boys was found to be:

Right hand 46

Left hand 38

The average grip for the boys is 12 points more with the right hand and 9 points more with the left.

Later, tests in the high jump, broad jump and a dash, will be given.

Ruth R. Smith, a graduate of the Posse Normal School, was appointed in September, 1921, to assist in the Physical Training Department. Half of her time is devoted to high school work and half to supervision in the primary grades.

The evening gym classes in the high school are entering on their fifth year, with many of their original numbers. Enthusiasm runs high as usual. The registration has been larger than that of any previous year. If it continues to grow; I would advise forming a third class another year. If this were done, one evening could be primarily for beginners. This would be of advantage where so many are now able to take more advanced work.

This year, the girls from the continuation schools are having their gym classes in the high school on Wednesday evenings. The first half hour is devoted to light calisthenics, and the rest of the time to games, apparatus work and athletics.

Carl L. Schrader, State Supervisor of Physical Education, visited our schools this fall.

The outstanding points made by Mr. Schrader were: first, the desirability of a course in physical education, extending through the elementary schools and continuing with more advanced exercises in the high school, preferably universal; second, the value of out-of-door work over that done indoors; and

third, that under the circumstances, the work is going as well as possible here in New Bedford.

Mr. Schrader said, "My first impression, as created by my inspections this afternoon, is that the character of the physical work of the children here is unusually good. Evidences were there that the children had some conception of what they were doing and why they were doing it. They put conscious effort into their work. There was no artificial posture."

Mr. Schrader's visit was a great inspiration to us. It came early in the fall when the work was just starting up after our long vacation. I hope he will visit us sometime later in the season.

The Department of Physical Education this year, has been affiliated with the Department of Health and Hygiene. Dr. Rowell's suggestions and support have been very valuable.

I wish to express my appreciation to all the teachers for their co-operation in the work, and my deepest gratitude to the teachers who have so willingly taken the posture classes. It has meant extra work for them and added responsibility. That these classes have been so successful is due to the enthusiasm of the teachers and their interest in the individual cases.

I wish to thank you, Mr. Morrill, for the support you have given me and for making it possible to extend the activities of my department.

Respectfully submitted,

(Signed) ELVA M. PARKER.

Playground Report, Season 1922.

The nine playgrounds opened July 5th with a staff of thirty-four workers, and continued through August 26th. The plan followed was identical with that of the model playground day submitted to the School Committee last spring, and I am pleased to state that in the majority of cases this general idea was carried out.

There were several experiments tried in the system this year; one, I think, is especially worthy of mention. Due to the size of the appropriation and to the some eight hundred dollars spent from the appropriation before I took charge of the playgrounds, it was necessary to devise some means of obtaining funds. We decided to have the children pay for all materials used for handicraft, sewing, etc. This was thought to be an impossibility, but the final returns show that the department is responsible for only forty dollars and seventy-seven cents, or one thirtieth of the entire bill.

Another step was the picnic idea. This of course was not an innovation but it was decidedly new to have some of the people of the city come forward and offer financial aid. In such instances, I understood that the School Committee had vested me with enough authority (in cases where donations were small) to put in an equal amount of the city's money. This money was used to furnish transportation, to buy milk, ice cream, etc., for the children, and I think this picnic idea was one of the finest of the season in that it reached the poorer class of people, some of whose children had never been either to the country or seashore.

Individual exhibitions were another new feature. This plan enabled parents to see their children's work and proved to the children that we appreciated their efforts; also, we desired to interest primarily, the older folks in the playground movement. The climax came on Saturday, August 26th, when the big exhibition was held. At this display there were over four thousand individual pieces of handicraft exhibited, all of which were made and paid for solely by the children of the city.

Athletics were not neglected and some of the keenest competition I have ever seen developed on the playgrounds of the city. Thirty-two boys passed the highest badge test which in itself is an accomplishment of high order. The girls were not forgotten and many surprises developed in their games. Although more prone to quarreling than the boys the season was completed without any casualties.

A twilight league was organized at Ashley Park and it proved a great success, although at times there were arguments that threatened to assume serious proportions. Nevertheless, the league accomplished the purpose for which it was organized, namely to teach the young men of the South End sportmanship and to furnish the people of that district good, clean, wholesome recreation.

At the close of the playground season some of the staff aided the seventy-fifth anniversary committee and were in a great measure responsible for the successful carrying out of the track meet, the pageant, and other events. For this work, the entire equipment of the playground department was put at the disposal of the committee and our department prepared the anniversary program.

Attached to this report is a fairly complete financial statement of the funds expended during the past season. As estimated herewith, the department is within its appropriation and although there are several outstanding bills they are of such a small nature that the principle will not be materially affected.

Regarding the staff: for the most part I was exceedingly pleased with the workers but in a few instances cause was given

for criticism. To prevent workers from finding an excuse for a vacation at the height of the playground season, it would be an excellent plan if all workers were required to sign a contract that could only be broken in case of severe illness. In this way will the playground season be a greater success.

MACHINE SHOP DEPARTMENT.

Day School.

This department has for its object the training of the boy so that he may enter the trade as a machinist, and to make a good and useful citizen. Those boys who satisfactorily complete the course are given a diploma. This diploma is a certification that the boy is capable of doing a day's work in a machine shop satisfactorily.

Boys on entering this department are given work on lathes and drill presses. They are taught the use of bench tools and have tool room service where they learn the names of the different kinds of tools and their uses. This teaches them the proper way of caring for tools.

First year work includes the following operations on lathes—rough and finish turning, turning to shoulders, arbor work, facing, parting, threading, filing, polishing, drilling, boring, reaming, the use of flat drills, taper turning, taper boring, taper reaming, centering, reading of drawings, etc.

Boys rated as second year boys work on milling machines where they are given real shop jobs together with some tool making such as—taps, reamers, counterbores and spiral cutters of different styles. Some of the operations in milling are:—surface, side, end, keyway, straddle, gang using several cutters, spiral boring reaming Vernier setups, angle-iron setups, vise work, cutting gears (spur and bevel), cutting racks, using slotting attachment angle work, dove-tails.

Third year rated pupils are advanced to planers and shapers. Here the boys are given castings to lay out and machine to a drawing and are given the different operations that can be done on these machines beginning with the simplest and working up to the more difficult. They are taught grinding of tools to give the correct finish and are also given the different setups. The last half of the third year they are given the grinding machines to work on. This work includes the grinding of all types of milling cutters, shafts (straight and tapered), internal grinding of all descriptions. In the grinding work boys are kept on close limits. They are also given the simple welding, and brazing with acetylene and forging work.

Fourth year pupils are given the most difficult of problems to work out in connection with their work. These boys are given a job and are told to carry it right through the various

operations until finished. They must also plan their work. Hardening and treating of steel is taken up at this time. Fourth year boys are given practical problems in mathematics by the department Head.

All through the course the boys are given one lesson period a week on trade science when the problems they are likely to need are taken up by an instructor.

The department is organized under real shop conditions. The boy is trained on real jobs, not an exercise is used. Among the jobs now going through the shop are six No. 3 New Bedford grinders, four 18" wood turning lathes, twelve bench drills—this last named is one of the new machines we are putting on the market for the first time—twelve 4½" bench vises; besides these machines we are doing some outside work such as small studs, bolts, rolls and gears. These last named gives us a chance to do a lot of drill or repetition work, which is very necessary to the training of the boy.

Along with this work the boy receives a good education in mechanical drawing, shop mathematics, trade science, English and civics. The course is laid out as a four year course but this does not mean that the boy must stay four years to get a diploma. As the instruction is for the most part individual a boy goes as fast as he satisfactorily completes each unit.

The work is not heavy or injurious to the boy's health. We encourage all boys to take part in the school activities, believing that all work and no play makes old boys.

During the year we have put in some new lathes to take the place of the old worn out ones. We have a few more of these that we hope to replace this year with new ones.

AUTOMOBILE COURSE.

A Course in automobile repair and maintenance has been added to the list of trades the school is now teaching. This course is conducted under the same organization as the machine shop. The course has proven very popular and we had to establish a waiting list owing to lack of room. The boys that were placed on the waiting list were given an opportunity to enter the machine shop if they so desired until an opening is made in the automobile department. This does not interfere with their automobile course. In fact it is a good thing for them because they get their machine shop practice all at one time, instead of spending one half day a week in the shop, as they must do if they start directly in the automobile shop.

The course is laid as a four years' course, but this does not necessarily mean that a boy need stay four years to get a diploma as the instruction is all individual; the boy progresses as fast as he satisfactorily completes his work.

For units of the course, the types of cars are taken; the Ford car is used for instruction the first part of the work, then the Chevrolet. After these two types have been completed the larger size "fours" are studied, then eights and twelves are given in their order. Along with this work is taken up the study of *carburetion* and ignition, starting with the simpler type and progressing systematically to the more complex. During the year we endeavor to send the boys out into a first class garage so that they may become familiar with real garage conditions.

This course presents a wonderful opportunity for a boy to learn the automobile trade. How many garages would allow a boy of 15 or 16 years to overhaul a car, and where is the foreman that has time to give individual instruction?

The boys work on a car that really has to be repaired not one that is taken down and then put together again simply to let them see the insides. Every car that is overhauled is sent out with a guarantee that the work is first class.

During the year we have had the co-operation of a number of the garages and dealers.

Due to the lack of space the number of students is limited to 16.

Evening School.

The machine shop course appeals to men in the machine shops who are ambitious to rise higher in the trade. Men who are classed as lathe hands attend the school for training on millers, planers or some other machine they wish to learn to operate. It is very gratifying to know that a number of these men come back term after term, taking up new work or completing their unfinished work.

This course is laid out on unit basis, each unit representing one type of a machine. An applicant for training chooses his own unit and is given work that he needs or desires. Employers could obtain valuable information by calling up the school when in need of an operator. A man that is ambitious enough to attend an evening school is a good man to have in the shop.

A record is kept of the kind of work the man does, the quality, and his attendance.

The instruction is all individual and the student progresses as fast as he absorbs the instructions given.

EVENING AUTOMOBILE COURSE.

This course is proving a success under our method of instruction. It is divided into four units—the Motor, Chassis, Ignition and Carburetor. The time spent in each unit is 20 weeks, the classes meeting twice a week for two hours at a time, making in all 80 hours. It is obvious that we cannot make automobile mechanics in that length of time, so the course is intended only to give men in the automobile trade a chance to study the automobile under the direction of practical instructors. The school has been very fortunate in obtaining the services of men high in the trade. It is with great satisfaction that we note that the men after completing one unit return the following term to take up another.

There has been added to the course a special class called the Ford Class. In this class the students work only on Ford cars, taking down the whole car.

We overhaul the cars of the citizens who can spare their cars for 20 weeks, asking them to pay for the new parts put in.

Speed and up-to-date methods are the watchwords of this class. The Ford service bulletins are used as a basis of instruction.

ELECTRICAL DEPARTMENT.

Day School.

It is the aim of the department to build a thorough foundation in the fundamental principle of applied electricity, that the student may, with a much better chance of success adapt himself to some part of the electrical trade and with a far better advantage than the boy who just learns a trade.

The students in this department receive a thorough course in all kinds of electrical construction in differently constructed buildings, such as knob and tube, cleat, wood and metal moulding, B. X. and conduit, single and double pole, 3 way, 4 way, electrolier, and remote control switches, meters, bells, annunciators and telephones.

They are also taught where and when each different type of construction should be used.

The student also receives motor and generator work covering construction, care, testing and installation.

Instruction on batteries, auto-ignition, and switchboard is given. The student has a thorough course in Code Rules as regulated by the National Fire Underwriters.

Besides the regular mathematics as given in the Related Department a thorough course in magnetism, direct current and alternating current mathematics is given. Courses in D. C. and A. C. machinery are also given. All mathematics, drawing and English is given in the Related Department.

All construction work is done from shop sketches or finished drawings made by the students. The boy who makes the drawings does not necessarily put up the work. This gives other students experience in reading drawings other than his own.

The only outside work done by the department is for the different city departments.

Work done by the students must not only be electrically well done but mechanically also. If the work is not satisfactory the student must continue until defects are corrected. A record is kept of each student showing kind, amount, and quality of work done. This record is on file and employers of students from this department are invited to consult it before hiring them.

We build all our lighting panels used in this school. At present we have one 10 circuit panel and 2 twenty-four circuit panels under construction. We have under construction 1

twelve station central and 1 seven station interphone system. The school is equipped with a first class set of modern electrical instruments for both A. C. and D. C. machinery. As fast as possible A. C. and D. C. machinery is being added to the equipment.

The following work is being done at present in the school; all the obsolete electrical construction is being replaced with conduit or its equal. Feeds for 13 K. W. D. C. generator, feeds for main switchboard, overhead feeds for administration and girls' building. In the generator pit at present one 20 H. P. 3 phase motor drives a shaft which in turn drives two 13 K. W. generators. The students are changing this to individual drive, each generator to have a motor of sufficient power to drive the generator at its full load capacity. Not only are the students doing the electrical work of this change-over but the mechanical as well which include making two reinforced concrete bases for the new motors.

Following are some of the jobs completed or under construction during the term of 1922-1923 for New Bedford schools:—Dunbar School—3 No. 8 wire service, meter loop, and ground wire, two outlets second floor for dental clinic.

Benjamin School—No. 8 3 wire service meter loop and ground wire, 2 outlets second floor for dental clinic, 8 outlets in basement for girls and boys wash rooms.

Cedar St. School—3 No. 8 wire service meter loop, and ground wire, two outlets second floor for dental clinic. All work done in conduit construction.

Acushnet Ave. School—Complete service of 3 No. 6 wires, 46 lighting outlets in basement, 9 S. P. switch outlets in basement, 5 classrooms on first floor, 5 classrooms on second floor; each room has 4 ceiling outlets and one switch; 2 outlets on 1st floor for dental clinic, each corridor 8 outlets controlled by switches, each stairway (of which there are 4) has a light controlled by 3 ways up and down. Total number of light outlets—106, total number of switch outlets—30, 3-10 circuit lighting panels. All electrical construction above basement in B. X. and basement done in conduit.

Evening School.

We have classes of evening instruction consisting of two in house wiring, one in Code Rules, one in winding A. C. machines, and one in electrical machinery.

House wiring begins with elementary work such as bells, annunciators simple lighting circuits, electrical stock and

fittings, and advances as fast to more difficult work as his allotted time and capacity will allow.

The code rule class study laws governing electrical construction. The object of the class is to prepare the student to pass the State Examination for a journeyman's license.

In the electrical machinery class practical care, tests and calculations are carried on, wiring of storage batteries, A. C. and D. C. generators and motors, rheostats, controllers, transformers, and measuring instruments are studied.

Each student in the A. C. motor winding class is provided with a stator for which he calculates the amount and size of wire necessary to produce the rated horsepower, lays out the form for the coils, winds the coils, and inserts them in the slots. After the stator has been wound it is given a complete test for shorts, opens, grounds, reverse coils, etc.

This course gives one an opportunity to become familiar with the electrical and mechanical construction of the alternating current motor.

POWER DEPARTMENT

Day School

The object of this department is to train the boy so that he is familiar with the different types of apparatus used in a boiler room.

The instruction also prepares a boy to take the State examination for second class fireman.

On entering this department a boy is made assistant fireman. He is taught to make and keep a good fire, weigh and make a record of the amount of coal burned, ashes taken out, and volume of water evaporated. He learns to handle injectors, pumps, traps, and other necessary fire room apparatus, and to be accurate and reliable in his work. Thorough instruction in installing steam, gas and water pipes is also given in this department. Each boy is properly prepared for all the duties of assistant fireman before the close of the second year.

The equipment of this department is divided into two groups; one group in operation and used for instruction, the other group used for instruction purposes only.

The first group comprises a 90 H. P. vertical fire tube boiler, a 55 H. P. locomotive, with all the apparatus that boilers of these types have, a 15 K. W. Ideal direct connected unit, together with valves, traps, gauges, regulators, and so forth.

The second group, which is used for instruction purposes only, comprises a 15 H. P. vertical fire tube boiler, a 35 H. P. Watts-Campbell Corliss engine, two small upright engines used to teach slide valve setting, and pumps, valves, and so forth.

Complete apparatus for testing flue gases, coal and oil has been added to the instruction equipment of this department.

Evening School

The work in this department is divided into four groups, each group taking care of different licenses. On enrolling in this department, the student tells what kind of work he is doing during the day and license held. From this information he is placed in a group from which he will derive the greatest benefit. The instruction in the different groups is carried on by means of questions and answers, supplemented by talks and explanations, by the instructor. These questions are taken from practical work and deal with practical problems, and are revised from time to time, to meet the changing requirements and regulations.

The students are invited to bring in for discussion problems that they meet during the day. This department is equipped with apparatus that has been sectioned, so that the internal workings of the machine may be readily studied by the student. For men who work nights, morning classes are conducted.

A course in Boiler Room Chemistry was given this season with very good results.

Plumbing

This course is for men employed during the day in the plumbing industry and is divided into two units, one for helpers and one for journeymen.

The helpers course is laid out so as to benefit beginners and others in the trade who have not received their State licenses. Part of the student's time is spent learning how to make the necessary trade sketches and answering questions, while the remainder is spent on practical work.

The advanced course deals with the more difficult operations of the trade, as well as the method of laying out work and figuring jobs.

Due to the large enrollment this last season it was necessary to run these classes four nights a week.

DEPARTMENT OF RELATED WORK

Day School

This department teaches the technical subjects related to the several trades. These subjects are laid out in such a way as to be closely tied up with their work in the shop. Individual instruction is given as far as practicable, as this method has been found by experience to produce the best results. This may be better understood when it is known that the previous education of our students may have stopped anywhere from the seventh up through the High School grades. Each instructor in this department is a journeyman in the trade whose related subjects he teaches.

Each trade requires different methods of applying all the well known principles, and this department teaches each student in each department that particular application that fits his special trade. Generalities in teaching related subjects such as mathematics, drawing, English, and so forth, are not productive of results, and for that reason we have special application of mathematics, drawing, and other kindred subjects, for the student in the Machine Department, special application of these studies for the student in the Electrical Department, in the Steam Department, and in the Carpentry Department.

The work in this department brings to the attention of the student the necessity of having a certain amount of specialized head work, to make him a more skillful worker with his hands.

Practical mathematics, beginning with the simplest form of fractions, and gradually working up to algebra and trigonometry as applied to shop work and shop problems, with a comprehensive course in formula work, shop mechanics, and strength of materials, comprises the work in this subject. The students in the Electrical Department are given direct and alternating current mathematics, together with the regular work.

The main object in the drawing course is not to make draftsmen, but to have the student realize a familiarity with the making and reading of drawings and blue-prints, a very necessary adjunct to his trade. We believe that the only way to teach a boy to read blue-prints correctly and easily, in the short time we have to train him, is to give him a good working knowledge of how shop drawings and blue-prints are made. With some of the advanced students, elementary work in designing is taken up, and some excellent drawings result.

English and civics hold an important place in the list of studies. The policy of the department tends toward furnishing the good tradesmen with a sufficient command of English to help when any chance of promotion in their trade offers itself. A good citizen is also of vital importance to the community, and our civics classes are carried on with that ideal as a goal.

MATHEMATICS

First year work is started in the elementary processes, as it has been found by careful observation that the student usually lacks the ability to apply them to his job. Fractions, decimals, ratio and proportion, square root, percentage, board measure, taper turning, and screw cutting, are taught in the first year classes.

Second year work consists of formula work, mensuration, shop geometry, metric system and special direct current mathematics for the electricians, and elementary algebra.

Third year work takes up elementary trigonometry, advanced algebra, roof framing, stair building, applied steam mathematics, and special alternating current mathematics for the electricians.

In the fourth year a general review is given, also courses in applied shop algebra, shop trigonometry, and strength of materials.

DRAWING

First year drawing consists of lettering, free hand sketching, blue-printing, and a complete study of projection. Special emphasis is laid on neatness during this year.

In the second year applied work in third angle projection is taken up, special attention being given to rough drafting and its relation to the finished drawing. After the foundation has been laid, each student branches out into the special drawing for his trade.

Third and fourth year students do all the finished drawings for the school, and take up advanced work in mechanical movements, gears, cams, and so forth.

A new machine, the New Bedford Bench Miller, has been designed this year.

ENGLISH

The first year consists of fundamental rules regarding grammar, correct usage, development of expression of thought, and shop report work.

The second year is devoted to the different forms of discourse with emphasis on debating. A course in letter writing

and applied, technical report work is also started during this year.

The work of the third and fourth year is given over to the application of what has already been learned. The chief aim of the course is to awaken an interest in the correct use of English, in order to make the student able to acquit himself creditably, either in written or oral work.

CIVICS

A complete course in Civics is given. "Observation, analysis and inference" are the essentials of the pedagogical methods adopted in this course. Local, state and national organization are constantly emphasized throughout, in such a way that not only is the relation of the citizen to each of them made vivid, but also the relation of the three divisions of government (legislative, executive and judicial) to each other are brought out with all distinctness. The chief aim of the course is to train the pupil for a better citizenship, to make him observant, analytical, and to educate him to think for himself in political matters.

TRADE SCIENCE

The science of each trade is taught in the different departments as the student progresses in that department. This work covers the origin, uses, and so forth of all materials used in their respective trades. The best methods of performing operations and standards that govern the work in each trade are also taken up.

By teaching the student the science of his trade, he becomes better fitted for efficient work earlier in his shop experience.

HYGIENE.

Due to the large enrollment and the small yard it was necessary to discontinue for the time being the daily setting up exercises. In place of these exercises department basketball teams were formed and a schedule of games run off. The electrical department proved to have the best team.

For the second time in as many years the school basketball team won the championship of Bristol County.

Evening School

Evening classes for 1922-1923 were held in this department for Machine and Carpenter Drawing and Sheet Metal Drafting.

An evening course in Linotype operation was started this season with excellent results. Provided that more linotypes be obtained, it is planned to have two classes in operation this coming season.

The evening drawing classes are intended to help men already in the trade to become proficient in making readable shop sketches, and to teach them to read blue prints. To this end a certain amount of machine drawing is introduced, that in making a finished drawing, they may also read one.

Elementary and advanced mathematics are taught to tradesmen, who have found that their work called for the use of figures with which they were not familiar. These classes have been very successful.

Classes in advanced work in any of the above studies may be formed if sufficient number of journeymen apply.

CARPENTRY DEPARTMENT

Day School

The object of this department is to give the boys a good training in all branches of the carpenter trade.

The students are given shop talks by the instructors, teaching them the name and use of the various tools and how to sharpen and take proper care of them.

They are taught to know the different kinds of wood used, and why different kinds are used for different purposes. They are shown how a house is framed together, how and why different kinds of joints are used in different places, and the proportions of the frame to get the most strength and use the least lumber, how it is put together to have the least trouble from shrinking wood and opening of the joints.

How to board in, shingle and clapboard a house, and the various kinds of material used, how and why it is necessary to use flashing in valleys, around chimney, and various other places to make a house tight, and the different kinds of material used.

The various kinds of material for covering the outside of a house, also the outside finish for a house. The inside finish is described, and the best way to put it together is shown.

They are taught to lay out various kinds of work from a plan, also to lay out a pole or rod for various kinds of work. The first year boys are given simple work to teach them the use of the tools. As fast as they are able to use the tools they are given the better work to do, they are usually able to lay floors set partitions, put up sheathing and upsom board, make simple cabinets, boxes, etc., and to help other students in more advanced work.

Second year boys are given more advanced work, putting up inside and outside finish, hanging and trimming doors, making lockers, cabinets, cases of drawers, etc. As fast as they seem reliable they are given work on the machines, are taught to lay out simple jobs from a plan, and are taught to make plans of simple work.

Third year boys are given still more advanced work. They are expected to be able to keep another boy at work with them. They are expected to make mitre joints, intersect mouldings, etc., make hard wood cabinets, chests, bookcases etc. The boy is given a problem to draw a house, also the first two problems

in roof framing, to figure the lengths of rafters and to lay them out and build the model of a roof to a scale. He is also given a problem to build a model of a flight of back stairs.

The fourth year boy makes plans of his work and lays it out and finishes his course in stair building and roof framing.

The equipment of the department is thoroughly modern and consists of a moulding machine, surface planer, buzz planer, hollow chisel mortiser, double head and cope tenoning machine, spindle shaper, band saw, swing and speed lathes.

Evening School

Two courses were conducted in this department during last season, one in general carpentry work and one in roof framing. The membership and attendance of both classes was better than in past seasons.

The course in general carpentry covered the use of tools and simple cabinet making.

The roof framing course followed along the lines of other years, the men being instructed how to figure the length and bevels of rafters, the use of the steel square, and how to read plans.

HOUSEHOLD ART DEPARTMENT.

The courses given in the Household Arts Department are essentially for training in homemaking, but it is also the aim to give the girls some foundation for managerial work, such as tea room work, managing housekeepers' work, running a home bakery, or doing work in millinery and sewing for private parties or in stores.

Cooking

The aim of the cooking course is to teach the principles of cookery and the practical application which may be worked out in the girl's home as well as in the school kitchen.

Since all of the food prepared is served at the noon-day luncheon at school, the girls exercise great care, thereby developing self-confidence and a keen sense of responsibility.

Groups of first year girls prepare the students' luncheon which is served on trays, cafeteria style, every day. This luncheon is sold for from fifteen to twenty-five cents, depending on the amount of servings. About fifty trays are prepared each day.

A thorough study of foods and food values is taken up during the first two years.

The second year cookery course consists of the preparation of the teachers' luncheon every day.

These luncheons are planned very much the same as the girl would plan a meal in her own home, only, of course, larger quantities have to be prepared since twenty-five teachers are served every day.

The teachers pay a certain price and the girls have the problem of planning a luncheon which can be served for that price. They do the marketing and keep the accounts for this meal.

In order that each girl may have the individual responsibility of planning, preparing and serving a meal alone, she is required to serve a luncheon for three consecutive days to any four members of the faculty whom she chooses to invite. These teachers pay as usual, and the girl in charge plans the meal with that amount of money to spend.

The first day she has another girl to help serve the meal. The second day she both prepares and serves, and the third day she prepares, serves and is hostess at the table with the four teachers.

On this third day she may invite one of her classmates as guest at her table if she chooses.

This work is done almost without supervision and has done a great deal toward developing self-confidence in the girl.

During the third and fourth years, the girls are given some practice in more elaborate cookery. While we do not encourage this cookery in the homes, it is necessary for the girls to know something about it, in case they may be called upon to do it or supervise it.

Some time is also given to tea-room management, suggestions as to equipment, service and business methods.

There is also a course in comparison and experimental cookery which brings more forcefully to the mind of the pupils the distinct connection between science and the kitchen.

Sewing

During the first year the girls are taught the use and care of a sewing machine and its attachments, and the use of paper patterns. The girls are also taught to measure each other for the patterns and to cut and make the following garments:

Sewing apron

hand made, including the principles of putting on band, buttonholes, hemming by hand, and oversewing.

Cooking uniform

Laundry apron.

Gym bloomers (sateen or serge).

Nightgown.

Slip.

One piece cotton dress.

Cotton bloomers.

Five piece petticoat, French seam, all hand hemmed.

Choice of either slip or nightgown.

Cotton blouse.

Dress—choice of material in cotton or skirt may be wool if desired.

2nd year.

1 pc. hand made underwear.

Cotton dress.

Woolen dress or woolen skirt and blouse.

Man's shirt.

Hand made waist.

Sport skirt.

Renovated problem.

Second dress.

3rd year.

1 pc. hand made underwear.
Cotton dress.
Woolen dress.
Renovated problem.
Silk dress.
Sport skirt.
Hand made blouse.
2nd renovated problem.
Cotton dress.

4th year.

Cotton dress.
Silk dress.
Woolen dress.
Kimona and boudoir cap.
Sport skirt.
Renovated problem.
Graduation underwear.
Class day dress.

In the second year the use of power sewing machines and attachments is taught.

The renovated problems or remodelling of old garments brings out certain principles that the girls would not otherwise get, and is an important feature of the dress making course.

Hand work, including smocking, hemstitching, and embroidery is emphasized in third and fourth year classes.

The third and fourth year girls after completing required work may make a suit or coat.

There is also a course in mending and darning which every girl is required to take.

Closely associated with the sewing course is the study of textiles. This includes the history and manufacture of different clothing materials, such as cotton, silk and wool, a knowledge of which enables the girls to select and buy cloth intelligently and economically.

· Millinery.

First Year:

Theory:

History of millinery.
Advantages of a milliner.
Study of frames.
Fitting the head.

Practical work:

- Renovation of winter hats, frames, and materials.
- Making velvets hats and trimmings.
- Renovation of spring hats.
- Making straw hats and trimmings, including ribbon and crepe facings.

Second Year:

The same course is followed as in the first year, but more advanced work is done. Hats of fabric, satin and fur are made; also the renovation of fur muffs, and neck pieces is taught.

After completing a two year course in millinery, the girl is fully equipped to go out as a milliner's assistant and after two season's experience in the store she should qualify as a milliner.

Design

The work done in the design classes consists of studying and applying the fundamental principles of art to every day life. This course correlates with the work done in the dress-making, millinery and domestic science classes and seeks to cultivate good taste and appreciation of beauty, whether the problem be the designing of a dress, the remodelling of a hat or the furnishing of a room.

Household Management

This course includes the theory and practice of every process connected with housework. Planning and construction of houses are studied, much attention being given to the kitchen and kitchen equipment. This enables a girl to plan her own home successfully, keeping in mind the saving of money, time and energy.

A part of the time during the second year is given to the planning and keeping the personal budget and after that, the family budget.

Household Science

The purpose of this course is to lay a foundation for an intelligent and economic care of the home. It includes a study of the various principles and laws of physics and their applications to the facilities and conveniences of the modern household.

The physics of the kitchen range, heating and ventilating systems, simple machines, thermometers, refrigeration, lamps, etc., are considered. It also includes the study of water supply,

plumbing, and disposal of sewage. A study of the common elements is made as a foundation for the study of foods and of chemical changes that occur in the everyday experience of the home maker. A brief study is made of bacteria, yeasts and molds in order that the student may understand the precaution in procuring food from the market; the care to be taken in preparing and preserving foods in the home and the value of certain organisms in ripening and giving flavor to foods.

Home Nursing and Hygiene.

The aim of this course is to teach the girl to keep her body in the most healthful condition, and to give some knowledge of the care and comfort of the sick in the home.

The room in which this work is given is equipped like a home bedroom.

Making the bed with the patient in it, bathing and moving the patient are some of the points emphasized, a large hospital doll being used for the practice work.

Much attention is given to the care of children, bathing, dressing, etc. For the practice there is a one year old size hospital doll.

Some work in bandaging and first aid is also included in this course.

The four year course which is open to all girls who are grammar school graduates prepares them to enter Framingham Normal School for the special Household Arts Course which is conducted there. After completing three years at Framingham, the girls are fitted to teach in Household Arts Schools. Any girl who has had two years at the High School may, with two years at the Vocational School, be fitted to enter this course at Framingham.

This year, girls from our second year class are assisting in some of the work done at the Y. W. C. A. as teachers of sewing and millinery to classes of younger girls.

Also the second and third year girls are continuing the work as teachers of cooking classes of children at the City Mission. This is excellent experience for them and at the same time they are rendering a valuable community service.

English

The course in English includes a careful study on many standard English works—both prose and poetry—and a brief survey of some of the best modern writing. Oral English is

emphasized, much time being spent on discussion of the literature studied by the girls.

Only such written work as is of practical value is given, such as the writing of business and friendly letters. Here opportunity for thorough drill in grammar, punctuation and sentence construction is offered.

The course also includes a study of the drama, from the Shakespearian to the modern play as well as practice in staging, costuming and producing plays.

The aim of the course is the cultivation of better speech and the appreciation of the best in English literature.

Civics

The first year classes in civics take up the study of city conditions in general and New Bedford in particular. The history of the city is studied and later girls are led to think of the modern problems which present themselves. Discussion is encouraged and suggestions for betterment are brought forward and talked over.

The second year girls continue along these lines, noting the growth of the cities and discussing the causes. Particularly do they notice that through co-operation and community spirit many changes for the good have been brought about—in fact that the helpful spirit is necessary in everything, successful school life as well.

The third and fourth year girls turn their attention more particularly to the various stages and growth of our government—town, state and national.

Home Project Work

The Home Project Work which is carried on in connection with this department has added both interest and enthusiasm to the carrying over into the home the principles and processes taught at school.

Each girl remains at home one half day each week, at which time the teacher having charge of this work may visit the home and supervise the cutting of a garment, the preparation of a meal or general housework, whichever one has been chosen for the girl's special duty. All the projects are assigned after a conference with the girl's mother as to what the needs of the home are for that particular day. Each teacher supervises her own projects.

Many of our girls do work at home other than that assigned

by the teacher. The record of this is kept by the pupil, signed by the mother and sent to the school, where credit is given the girl for the work.

The aim of the Home Project Work is to develop initiative in her own home problems on the part of the pupil and to encourage co-operation on the part of the parent.

Physical Training

The object of the Physical Training Department is to teach control of bodily movements, improve the functional activity of the body and counteract and correct tendencies to abnormal development, especially those resulting from daily habits, by means of a proper selection of exercises, dances and games.

The principles of the Swedish System are closely followed in the exercises, each exercise having a definite aim and effect. A part of each lesson is devoted to these exercises. Attention is given cases needing special corrective exercises for extreme postural defects.

Military marching and tactics are included in each lesson, developing the power of concentration and instant response to command. Folk dances are given to develop grace and ease. Games developing fairness of play, good judgment and team work are also included in the course.

Good health and strength are essential to happiness. With this in view, the course in physical training is planned.

Evening Practical Art Department

In this department the enrollment has increased somewhat during the past year, the total registrants number about two thousand and one hundred pupils. These are distributed among one hundred and forty classes, for which sixty-eight teachers are employed.

Free instruction is given in four lines of work: dressmaking, millinery, cookery and home nursing. These courses are open to all women who are sixteen years of age or over. The expense of these courses is borne jointly by the city and state. The pupils in the sewing and millinery classes bring their own materials, while the cost of the raw materials in the cookery class is divided among the pupils. A registration fee of one dollar is charged and is returned at the end of the course to those who have attended eighty per cent of lessons.

Regular outlines of work, approved by the state, are followed in all courses except the home nursing which uses the Red Cross outline.

There has been a decided increase in the number of afternoon classes, which leaves more room and time for those who can come only in the evening. The afternoon classes meet only one afternoon a week. The state considers that one afternoon of three and one-half consecutive hours is equivalent to the four hours of evening work which is divided into two hour periods. Each class continues for twenty weeks, making a total of eighty hours for the evening work and seventy for the afternoon classes.

One class in dressmaking is held two forenoons a week at the Sassaquin Sanitorium. Many attractive garments are made in this course which is made up of miscellaneous projects to meet the individual needs of the pupils. Some of the work is for the Sanitorium such as hemming towels, napkins, kitchen aprons, etc.

Both dressmaking and millinery classes receive instruction in the use and care of sewing machines. Commercial patterns are used and alteration of these is taught in the class lessons. In addition to the regular work on new garments, a special unit has been introduced for renovation work. Work in the millinery classes includes both fall and spring work, renovation receiving a prominent part.

The cookery course starts with canning and preserving. Then the instruction is continued on the meal basis; a complete

breakfast, dinner and luncheon being served each night. Planning balanced menus and the serving of meals is included in the course. This year as an innovation two demonstrations were given on the use of the pressure cooker.

The home nursing course consists of bandaging, emergencies, care of the sick at home and the care and feeding of babies.

The exhibition was held as usual this year at the State Armory. It is regretted that this can last only one afternoon and one evening, but it is impossible to secure the Armory for two evenings in succession. The classes are held during the year in eighteen different buildings, located in various parts of the city. At exhibition time it was necessary to transport tables from nearly all of these buildings to the Armory, as about one hundred and thirty tables are needed to take care of the hats, blouses and underwear. In all about one thousand garments and five hundred hats are exhibited. The cookery classes have an attractive arrangement of bread, cakes, cookies, salads and candy; also an invalid's tray, and a dining table all set up with an appetizing meal are features of the exhibit.

A regular room is made by the use of screens for the home nursing classes. A hospital bed is included in the equipment. A year old size doll and an adult size doll are used in this work. At the exhibition during the evening continuous demonstrations of bed making, care of patient, bandaging, etc., are carried on.

To the thousands of people who view this exhibition it presents a pleasing appearance, but few realize the amount of work which is accomplished in a very short time. The work starts at nine o'clock the preceding night and in two hours the exhibit is ready except for the finishing touches. The sixty-eight teachers and the four supervisors, assisted by about six boys from the Vocational day school accomplish this big task in record time.

During the evening music is furnished by the High School Band. For nearly an hour living models parade on an especially arranged platform, displaying gowns, coats, and hats made in the classes. Several small children dressed in becoming frocks and hats add greatly to the appearance of this feature.

One hundred and twenty-three diplomas were presented to pupils who had completed three years' work in dressmaking, millinery or cooking. Twenty Red Cross Certificates were given to home nursing pupils signifying the completion of the prescribed course.

ANNUAL REPORT

OF THE

SUPERINTENDENT OF STREETS

OF THE

CITY OF NEW BEDFORD, MASS.

TO THE

CITY COUNCIL

FOR THE YEAR ENDING NOV. 30, 1922.

NEW BEDFORD, MASS.
A. E. COFFIN PRESS—PRINTERS
1923

Report of the Superintendent

To the Honorable Mayor and City Council,
New Bedford, Mass.

Gentlemen :

The Annual Report of the work of the Street Department including sewers, bridges and garbage collection for the year ending Nov. 30, 1922 is herewith submitted.

Respectfully,

HORACE BORDEN,
Superintendent.

NEW BEDFORD—1922

GENERAL STATISTICS

Population, assessors estimate 130,955.

Valuation, assessors estimate \$200,964,491.

Area, about 19.4 sq. miles.

Accepted streets, 202.95 miles.

Bridges—New Bedford and Fairhaven Bridge, 70 feet wide and 9/10 mile long; 4/5 maintained by New Bedford. Slocum street bridge, 1/2 maintained by New Bedford. Coggeshall Street bridge 3/4 maintained by New Bedford.

11.91 miles granite block pavement, area, 190,708.2 sq. yds.

.82 miles wood block pavement, area, 21,511 sq. yds.

0.02 miles asphalt block pavement, area, 273 sq. yds.

0.34 miles brick pavement, area, 12,128 sq. yds.

(New Bedford and Fairhaven Bridge)

40.322 miles bitulithic and similar pavement,
area, 686,173.2 sq. yds.

39.456 miles bituminous macadam pavement,
area, 500,936 sq. yds.

58.617 miles water bound macadam pavement,
area, 707,494 sq. yds.

0.732 miles cobble pavement, area, 7,427.2 sq. yds.

Concrete paving in alleys and track
spaces, area, 14,520 sq. yds.

168.252 miles stone curbing,

45.906 miles granolithic walks, area 198,744.1 sq. yds.

31.575 miles tar concrete walks, area 135,668.3 sq. yds.

28.583 miles flag walks, area, 83,149.1 sq. yds.

SEWERS

161.66 miles of sewers.

Cost of sewer system to date (including interceptor)
\$4,348,662.06.

1962 catch basins.

911 eye-holes and inlets.

DECEMBER 30, 1922.

To the City Council of the City of New Bedford:

Gentlemen:—In compliance with the provisions of Section 91, of the City Ordinances, the New Bedford Water Board respectfully submits its fifty-third annual report. Accompanying it are the reports of the Superintendent and the Water Registrar.

Death has removed two of our oldest and most valued officials during the year:

ROBERT CARTER PITMAN COGGESHALL

Mr. Robert C. P. Coggeshall, who was Superintendent of the Water Works and Clerk of the Board from June 9, 1881, until April 28, 1922, when he was retired on half pay because of failing health, died on Oct. 21, 1922. Mr. Coggeshall had been in the employ of the Board for about fifty years. The following resolution, which was passed at the time of his retirement is presented here as fitting tribute to his memory: “

WHEREAS, the retirement of Robert C. P. Coggeshall from the Offices of Superintendent of the New Bedford Water Works and Clerk of the Water Board, positions which he has filled with unusual ability for a period extending from 1881 to 1922, gives us an opportunity to express the esteem in which we hold him, and also our appreciation of his long and valued services; therefore be it

“RESOLVED, That we, the members of the Water Board of the City of New Bedford, take pleasure in placing upon the records of the Board our high estimation of his fidelity and ability in the conduct of the affairs of the department.

“The period of his service has been one of constant growth and expansion, including as it does the time from 1894-1899, when the construction of the enlarged system of water supply was planned and completed.

"In his retirement he leaves behind a record of efficiency and far sightedness, which has few, if any, equals in the municipal service of any community in this Commonwealth."

By his death the City loses an honorable and capable official and a good citizen.

Mr. Adoniram S. Negus, Chief Pumping Engineer since Feb. 22, 1886, died Sept. 19, 1922.

The following resolution was passed at a meeting of the Board, Oct. 7, 1922:

IN MEMORIAM
ADONIRAM STONE NEGUS

Born December 7, 1850

Died September 19, 1922

Chief Pumping Engineer of the New Bedford Water Works from February 17, 1886 to September 19, 1922.

"WHEREAS: in the death of

ADONIRAM STONE NEGUS

the Board has lost a most efficient and faithful official, therefore be it

"RESOLVED: That in appreciation of the service which Mr. Negus has rendered this City in the discharge of his duties as Chief Pumping Engineer, we now place upon record this expression of his worth and our regard for his memory.

"He was a faithful official of the Board, and the duties devolving upon him during his thirty-six years of service were performed with intelligence and fidelity.

"The present excellent condition of the Pumping Station and water shed of our ponds remain as an enduring monument to his ability.

"RESOLVED: That these resolutions be spread upon the records of this Board and a copy be sent to the family of the deceased."

Mr. Stephen H. Taylor was elected Clerk of the Water Board and Superintendent, and Mr. George F. Burgess has been made Chief Pumping Engineer.

The following abstract drawn from the report of the Water Registrar, shows in condensed form the financial operations of the past year in connection with the present system, and the laying of the new 48-inch cast iron force main, as authorized by Chapter 232, Acts of 1921:

RECEIPTS.

Balance Dec. 1st, 1921.....		\$ 67,639.67
Receipts from water rates.....	377,217.42	
Receipts from other sources.....	30,899.13	408,116.55
		<hr/>
		\$475,756.22

PAYMENTS.

Management and repairs, less interest bonds paid and sinking funds.....	\$192,695.73	
Extension of works.....	143,877.69	
Interest paid.....	105,371.25	
Bonds paid.....	43,000.00	
Sinking funds.....	25,450.00	510,394.67
		<hr/>
Balance Dec. 1st, 1922. Deficit.....	\$ 34,638.45	
Additional amount diverted by auditor.....		7.29
		<hr/>
		\$34,645.74

The actual outlay for construction of these works exclusive of debt, interest, management and repair account, in 1921 was.....\$4,676,910.93

Increase in 1922

Lands bought around ponds.....	\$ 1,850.00	
Power gate on Force Main.....	4,975.88	
Distribution	111,961.54	\$118,787.42
		<hr/>
Actual outlay to Dec. 1st, 1922.....		\$4,795,698.35

It will be noted that this shows a deficit of \$34,638.45. The demands for extension of mains and additional services caused by the increased building operations of the past two years have been unusually large. If this work is to be continued at the same rate during the present year it will be necessary to issue bonds to cover the cost of extensions.

On June 22d, Mr. Frederick H. Taber was re-elected a member of the Board by your Honorable Body for a term of three years.

Work on the new 48-inch cast iron force main has progressed, and at this date is completed with the exception of a small amount of filling over the pipe where it passes through the swamp between Morton's Corner and the Pumping Station.

The main is now in service and in case of a break in the steel main it will be possible to supply the City by pumping directly through the new main, with the High Hill Reservoir acting as a balance on the system.

Early last winter a report was submitted to the State Legislature by the State Department of Public Health, recommending the taking over, by a Commission to be created, of Assawompsett, Pocksha and Long Ponds as a reserve water supply for the cities and towns in the southeastern part of Massachusetts. This report was accompanied by a bill creating the District and Commission. Many hearings were held on this bill, all of which were attended by this board and the City Solicitor, as well as representatives of all the cities and towns in the proposed District. Considerable difference of opinion was expressed. Fall River urgently contended that Great and Little Quittacas Ponds, which were set aside for this city, under Chapter 345, Acts of 1914, should be included in the district supply. Your Board were equally urgent in contending that they should continue to be specifically reserved for New Bedford. The bill was finally referred to the next General Court and the subject will probably be a live one at the coming session of the Legislature.

It is the opinion of this Board that every effort should be made to retain exclusive control of these two ponds for New Bedford. There is sufficient water in the other ponds to furnish a reserve supply for all the cities and towns in the district for many years to come and if our present rate of growth continues, we will need to seek additional water from them before many years.

The masonry conduit which brings water from Little Quittacas Pond to the pumps is in need of repairs and cleaning. This cannot be done without shutting down the station for an extended period, or providing another intake. There is also need of additional screen area. For the above reasons a second and larger intake should be constructed this year. It is therefore recommended that bonds to the amount of \$250,000 be issued for the construction of a second and larger conduit and gate house.

In this connection it should be remembered that the Quittacas system was designed and built twenty-five years ago when the average daily consumption was about five million gallons. It was designed to provide for a consumption of about ten million gallons daily.

The average daily consumption of water for the past year was 10,792,111 gallons and for the month of November, it was 12,318,695 gallons. This means that we must be preparing for a considerable increase in the capacity of the system. The laying of the new 48-inch cast iron force main is a good start. This should eventually be extended to High Hill Reservoir, as the water is improved in quality by storage there. The second intake, which is proposed to lay this year, will furnish an ample supply to the pumps. Within a very few years, however, additional pumping capacity should be provided.

There are at present two steam pumps, each of ten million gallons daily capacity and an electrically driven centrifugal pump of six million gallons daily capacity. These are

all in first-class condition. The steam pumps are the most economical when run singly, and one should always be held in reserve in case of accident to the other. The six million gallon electric pump is a good auxiliary, but besides being considerably more expensive to operate, there is more or less interruption in the operating current. This interruption is due to the fact that it is brought twelve miles by wire, the greater part of the distance being overhead on poles and is subject to interference by electric storms, falling trees, etc. An additional steam driven unit of about twenty million gallons capacity should be installed within a few years.

For the protection of the purity of the water supply in the Quittacas Ponds two pieces of property have been purchased under the authority of your Honorable Body, as follows:

Town of	Bought of	Area	Cost
Rochester	Patience Gerrish	1 acre with bldgs.	\$1,500
Freetown	John M. Edwards	about 6 acres	350

The demands made upon the department by building operations have been very heavy. One hundred petitions for main pipe have been received, ninety-three of which were granted, and 6.98 miles of pipe added to the system.

Seven hundred fifty-two services have been added. This is the largest number ever laid in one year.

In view of the coal strike which occurred in April, it was deemed wise to fill the coal shed at the Quittacas Pumping Station at that time instead of in June, as provided by City Ordinance. At the suggestion of the Board, the Fuel Committee of your Honorable Body placed a contract early in April with David Duff & Son for 1,500 tons of Pocahontas coal at \$7 per ton, f. o. b. New Bedford. This was delivered promptly and resulted in a considerable saving in cost, as well as assuring a supply of coal to keep up pumping operations.

The house owned by this department on the west side of the Middleboro Road, near the Chief Engineer's residence, has been rented to the State Police Department for one dollar (\$1.00) per year. In return for this low rental the State Police Department furnish complete daily patrol of the property of the City. This patrol is now being made with beneficial results.

The following are the principal contracts which have been made during the year:

Date 1921	Contractor	Supply	Consideration
Nov. 30	National Meter Co.	Meters and straight connections	5/8" meter \$12.00 3/4" meter \$18.00 2" meter \$75.00 5/8" connections 60c per set 3/4" connections 90c per set. \$1,618.00
Dec. 21	Squire S. Davis Co.	Exchange of touring car	
Dec. 21	Stephen D. Pierce	3/4-ton Truck	1,124.00
Dec. 21	Auto Selling & Supply	2-ton Truck	4,000.00
Dec. 28	Chadwick-Boston Lead Co.	Lead pipe	\$6.73 per cwt.
Dec. 28	Fairhaven Iron Foundry	Iron Castings	Stop-boxes complete, 10c per lb. Round gates boxes, offsets, plugs, risers, & manhole frames & covers, 5c per lb.
Dec. 30	U. S. C. I. Pipe & Fdy. Co.	Cast iron pipe & special castings	12-in., \$43.40 per ton 8-in., 43.40 per ton 6-in., 43.40 per ton 2-in., 97.40 per ton Special castings, \$104.40 per ton.
1922			
Jan. 16	Darling Valve & Mfg. Co.	Hydrants and Gates	Hydrants, \$53.50 ea. 16" gates \$209.00 each 12" gates \$71.60 each 10" gates \$56.60 each 8" gates \$37.55 each 6" gates \$23.75 each
Feb. 7	A. E. Coffin Press	Printing report	\$342.50
April 8	Charles C. Whitman	Railroad ties	8 ft. ties, \$1.20 ea. Switch ties, \$58 per M. board measure
June 12	Chadwick-Boston Lead Co.	Lead pipe	\$7.34 per cwt.
July 11	U. S. C. I. Pipe & Fdy. Co.	Cast iron pipe	8-in., \$54.20 per ton

The following contracts have been executed in connection with the laying of the new 48-inch cast iron force main:

July 7, 1922, W. L. Reynolds for oak sticks @ 9c per ft.

July 8, 1922, Leadite Company for Leadite @ \$9.80 per cwt.

Respectfully submitted,

WALTER H. B. REMINGTON,

GEORGE G. SYLVIA,

H. E. CUSHMAN,

WM. H. PITMAN,

FREDERIC H. TABER,

New Bedford Water Board.

REPORT OF THE WATER REGISTRAR.

CITY OF NEW BEDFORD,
WATER REGISTRAR'S OFFICE,
DECEMBER 1, 1922.

To the New Bedford Water Board:

GENTLEMEN:—I herewith present to you a detailed statement of the receipts and expenditures of the Water Works Department for the year ending at this date.

RECEIPTS.

Balance Dec. 1, 1921,			\$67,639.67
Receipts for water:			
Rates:			
Domestic meters,	\$207,718.39		
Domestic estimated,	20.79		
Building purposes,	1,824.69		
Meter rentals,	13,284.30		
Total Domestic,	\$222,848.17		
Manufacturing meters,	154,369.25	377,217.42	
Services,	\$ 10,091.35		
Mains,	11,207.95		
Meters,	3,242.49		
Mill piping,	548.48		
Lands, etc.,	591.45		
Forestry,	3,507.09		
Workshop,	379.36		
Sealing mill fixtures,	405.39		
Maintenance of horses,	34.18		
Quittacas pumping station,	73.73		
Fines,	111.00		
Railroad,	20.00		
High Hill Reservoir,	22.00		
Miscellaneous,	307.33		
Accident account,	357.33	30,899.13	408,116.55
			\$475,756.22
Expenditures for the year ending Dec. 1, 1922,			\$510,394.67
Balance (deficit) Dec. 1, 1922,			\$34,638.45
Plus amount diverted from Water Works funds by City Auditor,			7.29
Balance for year (deficit) Dec. 1, 1922,			\$34,645.74

EXPENDITURES.

Management and repairs:

Superintendent's Dept., salaries,	\$17,002.21
Water Registrar's Dept., salaries,	25,435.06
Printing, stationery, advertising, postage and office supplies,	2,887.29
Traveling expenses, express, telephone and telegraph,	1,115.44

Quittacas Pumping Station:

Salaries and labor,	\$25,069.44
Fuel,	12,733.80
Oil, waste, packing and lighting,	1,074.89
Tools and other supplies,	2,763.45
Repairs of steam engines,	2.58
Repairs of boilers,	304.99
Repairs of centrifugal pump and motor,	95.53
Electric current, centrifugal pump,	5,782.65
Other repairs,	54.82
Buildings and grounds,	2,010.17
Miscellaneous,	2,360.47
	52,252.79

Quittacas supply:

Quittacas ponds,	1,289.03
Lands and forestry operations,	26,573.19
Engineer's house and barn,	253.90
Railroad,	2,827.08
48-inch steel force main,	259.00
High Hill Reservoir,	1,145.55
	32,347.75

Mains:

Pipe,	\$1,088.44
Stop gates,	755.49
Hydrants,	1,284.38
Flushing and inspecting,	1,112.72
Street Dept., repairing streets,	983.47
Miscellaneous,	42.39
	5,266.89

Services:

Repairing and removing,	\$ 988.50
Renewing and driving stop boxes,	1,016.78
Cleaning stops, taps and pipe,	384.22
Street Dept., repairing streets,	193.35
Water cart and car sprinkler hydrants,	19.42
Sealing and inspecting fixtures,	673.47
Fountains:	68.43
Meters:	10,174.69

General Maintenance:

Horses, carriages and automobiles,	23,127.53
Labor at workshop,	8,399.35
Materials at workshop,	502.76
Fuel, lighting and power at workshop,	1,238.68
Repairs workshop, buildings and pipe yard,	133.78
Miscellaneous,	1,363.01
Standpipe and lot,	10.79

Acushnet Supply :			
Storing reservoir and surroundings and dry swamp ditch,	\$ 950.47		
Receiving reservoir, pump well and Purchase St. station,	1,844.94		
Mt. Pleasant reservoir,	1,162.87	3,958.28	
Industrial accident account :		693.00	
Taxes and insurance :		2,458.59	
Legislative hearings :		216.65	
Pension account :		766.84	
		<u>\$192,695.73</u>	
Public debt :			
Interest paid,	\$105,371.25		
Bonds paid,	43,000.00		
Sinking funds,	25,450.00	173,821.25	\$366,516.98

EXTENSIONS.

Mains :			
Main pipe and special castings,	\$44,748.03		
Stop gates,	4,483.27		
Hydrants,	4,479.00		
Lead and gasket,	431.07		
Tools,	6,509.36		
All other supplies,	3,522.67		
Freight and carting,	3.10		
Labor,	31,824.80	96,001.30	
Services :			
Pipe,	\$ 6,759.02		
Taps and stops,	4,122.64		
All other supplies,	2,515.03		
Labor,	11,957.88		
Plumbing,	1,524.01		
Street Dept., repairing streets,	2,519.33	29,397.91	
Meters :			
Cost of meters,	10,114.88		
Cost of setting,	1,037.27	11,152.15	
Mill piping :		500.45	
Lands bought around ponds :		1,850.00	
Power gate on force main :		4,975.88	143,877.69
Total expenditures for the year,		\$	510,394.67
Whole outlay on the works to this date,			\$11,469,802.32
Balance Dec. 1, 1922 (deficit)			\$34,645.74

EXPENDITURES FROM THE BEGINNING OF THE
WORKS.

The receipts from the commencement of the works have been as follows:

Appropriations by City Council, 1888, and previous,		\$ 1,038,000.00	
Further supply,		1,316,639.60	
Duplicate supply main, 1910,		250,836.65	
Special extensions, 1911,		151,391.78	
Special extensions, 1912,		161,019.78	
Receipts for water,	\$ 7,650,302.27		
Receipts from other sources,	935,457.22	8,585,759.49	
		\$11,503,647.30	
Less used by City Council, 1913,	38,483.43		
Less used by City Council, 1918,	30,000.00		
Amount diverted by City Auditor, 1922,	7.29	68,490.72	
		\$11,435,156.58	
Deduct total outlay,		11,469,802.32	
Balance (deficit) Dec. 1, 1922,		\$34,645.74	
Outlay,	\$11,469,802.32		
Less credits,	935,457.22	10,534,345.10	
Management and repairs,	2,990,570.74		
Less credits,	127,056.63		
	\$ 2,863,514.11		
Interest paid,	\$1,413,400.64		
Bonds paid,	710,000.00		
Sinking funds,	751,732.00	2,875,132.64	5,738,646.75
Actual cost of works, not including last two bond issues,		\$4,795,698.35	
Water receipts,		7,650,302.27	
Deduct management and repairs, debt, interest and sinking funds,	5,738,646.75		
Amount used by City Council,	68,483.43		
Amount diverted by auditor,	7.29	5,807,137.47	
Water receipts applied to construction,		\$1,843,164.80	

The funds for the construction of these works have been derived from the following sources:

Investment of Sylvia Ann Howland water request,	\$ 100,000.00
Sylvia Ann Howland educational bequest,	100,000.00
Received from sale of bonds 1888, and previous,	815,000.00
Appropriation for construction in 1885,	23,000.00
Net receipts applied to construction,	1,843,164.80
Net proceeds of Further Supply bonds,	1,316,639.60
Net proceeds of Duplicate Supply main bonds, 1910,	250,836.65
Net proceeds of Special Extension bonds, 1911,	151,391.78
Net proceeds of Special Extension bonds, 1912,	161,019.78

	\$4,761,052.61
Balance (deficit) Dec. 1, 1922,	34,645.74

Net cost of works,	\$4,795,698.35
--------------------	----------------

The water debt to date is as follows:

Under sinking funds:	
Water bonds 4 per cent.,	\$ 120,000.00
Water bonds 4 per cent.,	1,200,000.00
Water bonds 3½ per cent.,	48,000.00
Under annual payments:	
Water bonds, 4 per cent. Duplicate Supply,	\$ 144,000.00
Water bonds, 4 per cent. Special Extension 1911,	95,000.00
Water bonds, 4 per cent. Special Extension 1912,	100,000.00
Water bonds, 5¼ per cent. 48-inch cast iron force main,	483,000.00
Water bonds, 4¾ per cent. 48-inch cast iron force main,	193,000.00
	<u>\$2,383,000.00</u>

Less sinking funds in City Treasury:

	Net water debt. Dec. 1, 1922,		<u>\$1,043,125.10</u>

Water receipts in 1921, \$346,799.64

Water receipts in 1922, 377,217.42

Increase in 1922, \$30,417.78

Received from City Departments:

Water rates, \$11,630.13

Miscellaneous, 1,545.63

Receipts and expenditures on account of the 48-inch cast iron force main, from Quittacus pumping station to the City, Dec. 1, 1922, are as follows:

RECEIPTS.

Proceeds of sale of bonds,	\$700,000.00
N. Y., N. H. & H. R. R. Co. over charge returned,	5.17
Labor charge, should have been charged to regular account	152.50
Labor on lands, should have been charged regular account,	74.97
	<hr/>
	\$700,232.64

PAYMENTS.

1	Pipe and special castings,	\$449,326.84	
2	Gates, check valves and air valves,	19,902.26	
3	Hydrants,	386.40	
4	Leadite, lead and gasket,	9,914.17	
5	Tools,	28,695.89	
7A	Labor laying pipe,	104,632.81	
7B	Unloading and distributing pipe,	6,906.52	
7C	Watchman,	414.41	
7D	Tools,	1,574.48	
7E	Connection at Beaver Dam,	22.07	
7F	Miscellaneous (preliminary work)	603.78	
8A	Standpipe, contract and materials,	7,901.31	
8B	Lot and clearing,	1,486.16	
8C	Foundation,	1,250.87	
8D	Carting,	256.96	
8E	Inspection,	843.62	
8F	Connections and services,	340.59	
9	Fuel, oil, grease, etc.,	7,067.41	
10	Lumber,	4,812.25	
11	Engineering,	1,179.76	
12	Traveling, telephone, telegraph, etc.,	465.75	
13	Repairing road,	8,649.33	
14	Printing and stationery,	100.84	
15	Miscellaneous,	2,892.94	
16	Accident account,	716.90	
17	Connection to steel force main,	1,449.79	661,794.11
		<hr/>	
			\$38,438.53
	Less amount diverted by Auditor,		17.84
			<hr/>
	Amount unexpended at this date,		\$38,420.69

Respectfully submitted,

CLIFFORD BAYLIES,

Water Registrar.

REPORT OF SUPERINTENDENT.

NEW BEDFORD WATER WORKS,
SUPERINTENDENT'S OFFICE,
DECEMBER 1, 1922.

To the New Bedford Water Boards

GENTLEMEN:—The fifty-third annual report of the Superintendent for the year ending Nov. 30, 1922, is herewith respectfully submitted.

Through the courtesy of Mr. X. H. Goodnough, Chief Engineer of the State Department of Health, the results of chemical examinations of samples of water taken at various locations is herewith given. These show that the quality of water continues to be excellent.

Copies of the rainfall records at Little Quittacas Pumping Station and at Long Plain storing reservoir appear upon the following pages, as well as various tables showing in detail the work of the department, consumption of water, etc.:

The principal work of the year has been on the 48-inch cast iron force main from Beaver Dam, where it was left last year, to the Quittacas Pumping Station. This work is now completed except covering a part of the line which runs through the swamp. The pipe in this section was laid on piles because of the low, swampy nature of the ground and a great deal of filling is necessary. This work is now in progress and nearly completed. Gravel is obtained from our own property on the water shed where the haul is comparatively short.

The laying of the new line was completed and water turned into the new main on October 26th, at which time the main was slowly filled and tested. No leaks of any importance occurred.

On November 7th, pumping through the old steel main was stopped and the pipe emptied from Beaver Dam to the Pumping Station, preparatory to making the cross-over connections between the old and new mains. This connection necessitated the removal of 82 ft. of the steel main and replacing same with the necessary branches and gates to control the flow. The steel main was cut on November 8th at 8 A. M., and on the 10th at 6:45 P. M., the connections were completed and pumping through the old main resumed.

During these three days the supply to the city was partly maintained by the six million gallon centrifugal pump, working through the new main, the balance being supplied from High Hill Reservoir. The water level in the reservoir was lowered 7.8 ft. or nearly one-half of its capacity while this work was in progress.

The cross connections are so arranged and controlled as to allow the operation of any pump through either or both mains, and a 48-inch plugged end is left for any future pump connections which may be needed. It is now possible to pump all water either through High Hill Reservoir or directly to the City with the reservoir making up the difference between pumpage and consumption.

The total cost of this work from the connection with the 36-inch main near the New Bedford-Freetown line to the Pumping Station including all cross connections was as follows:

COST OF 48-INCH MAIN LAID IN 1921-1922.

Class "B," "C," "D," N. E. W. W. A.

Pipe @ \$46.50 per ton, 18,813 ft.

Specials @ \$130.00 per ton.

	Total	per ft.
Pipe and specials,	\$326,096.04	\$17.33
Gates, hydrants and checks,	12,975.46	.69
Leadite and gasket,	6,364.32	.34
*Tools,	28,677.80	*1.52
Labor (see sub-division),	81,014.09	4.31
Fuel, oil and grease, etc.,	6,737.07	.36
Lumber,	4,309.35	.23
Consulting Engineering,	1,179.76	.06
Replacing road surface,	8,649.33	.46
Miscellaneous expense:		
Traveling, telephone, telegraph,		
printing, accident, etc.,	5,272.72	.28
	<hr/> \$481,275.94	<hr/> \$25.58

*Includes new tools purchased which are still in good condition to the value of \$18,940.05, or about \$1.00 per ft.

Labor may be divided as follows:—

	Total	per ft.
Excavating, laying, backfilling and grading,	\$71,492.83	\$3.80
Unloading and distributing pipe,	6,906.52	.37
Tools,	1,574.48	.08
Watchman,	414.41	.02
Preliminary work,	625.85	.04
	<hr/> \$81,014.09	<hr/> \$4.31

There still remains a little grading to be done on the line. Estimated cost about \$10,000.

COST OF 36-INCH MAIN.

Laid in 1920-21. 6846 ft. Class "D" N. E. W. W. A.

Pipe @ \$64.00 per ton.

Specials @ \$145.00 per ton.

	Total	per ft.
Pipe and specials,	\$121,191.85	\$17.70
Hydrants and gates,	6,052.25	.88
Leadite and gasket,	1,441.85	.21
Labor,	33,139.98	4.84
Fuel, oil, grease,	330.34	.05
Lumber,	502.90	.07
Miscellaneous,	371.59	.06
	<hr/> \$163,030.76	<hr/> \$23.81

Summary :

Cost of 48-inch steel main,	\$481,275.94	
Cost of 36-inch main,	163,030.76	
Cost of standpipe, foundation and connections,	<hr/> 12,079.51	
Surplus stock on hand,	5,407.90	\$661,794.11

WATER SHED.

The rainfall as recorded at the Quittacas Station was 50.76 inches. This is considerably above the average for the past twenty-eight years, which is 45.12 inches.

The ponds have been well filled throughout the year and water has been overflowing into Pocksha from Great Quittacas the greater part of the year. The surface of Great Quittacas has varied from elevation 51.75 on April 15th to 49.67 on December 15th. The present height is 49.86. Little Quittacas which is controlled by a regulated flow through a six-foot masonry conduit from Great Quittacas has varied from 50.49 on August 28th, to 46.92 on October 24th. The present height is 49.60. The level of Little Quittacas was kept low the latter part of the season to facilitate the work on the new 48-inch cast iron force main.

The screen in the intake gate house which was in bad condition has been renewed. The conduit connecting the gate and screen house with the pump well in front of the Pumping Station was emptied and examined while the new screen was being installed. There is considerable vegetable and spongy growth on the inside of this conduit. The examination also shows a crack which needs repairs near the outer end. This cannot be done until other provision is made for conducting the water from the pond into the pump well.

For this reason, as well as the fact that additional screen area is needed on account of the increased rate of pumpage, I would urge upon you the necessity of providing a new and larger intake during the coming season. Mention of this necessity has been made in the last few reports, and action should not be longer postponed.

Two small additional properties have been purchased, but there is still considerable area of our water shed which we should own, particularly on Black Brook, as has been mentioned in previous reports.

Forestry work on the water shed is in continuous progress. Thirty thousand white, red and Scotch pines were purchased from the State Forestry Department and set out on the land which has recently been cleared.

Under an agreement with this Board the State Police are daily patrolling our property, as well as this whole section of the State. This helps materially in keeping our water shed free from pollution. It will also reduce the chances of fires getting under way, and be of great assistance generally in maintaining desirable conditions in the vicinity of the ponds, as well as throughout this part of the State.

QUITTACAS PUMPING STATION.

The department has suffered a great loss in the death of Mr. A. S. Negus, who has been Chief Pumping Engineer since Feb. 22, 1886. His successor, Mr. George F. Burgess,

however, is maintaining the same excellent standard of neatness and efficiency. The pumps and boilers continue to give good service with only minor repairs. Last year a part of the economizer was renewed and this year, renewal of the remaining part has been started. This will put this piece of apparatus in first-class condition, and no further repairs should be needed for some time to come.

The average consumption for the year was 10,792,111 gallons, and for the past month 12,318,695 gallons. This requires that one ten-million-gallon steam pump be run constantly and the six-million-gallon centrifugal pump be run several days a week to keep the reservoir filled. The cost of pumping with the centrifugal pump is about double that of the steam pumps. For this reason the matter of a larger steam unit, which has been mentioned in previous reports, should be considered seriously quite soon.

RAILROAD.

The railroad connecting the Pumping Station with the main line of the N. Y. N. H. & H. R. R. at Braley's Station, which is used for the transportation of coal and heavy supplies, is in good condition. Beyond the renewal of some of the ties, no repairs of any account have been necessary.

48 INCH STEEL FORCE MAIN.

No repairs have been necessary on the 48-inch steel force main. In making the connection with the new 48-inch cast iron force main 82 ft. of this steel pipe nearest the station were removed. This afforded another opportunity for an examination of this pipe. It was in a gravelly soil and has been in service twenty-three years. Its condition was very similar to the piece described in the report of last year. There was considerable vegetable and spongy growth on the inside, also some blisters and pitting. Less than one-third of the area is pitted and the depth of pitting is from 1-16 in.

to 3-16-in. The same condition exists here as was reported last year; i. e. the pittings of larger area are of less depth than those of smaller areas. The outside is in perfect condition and the original coating mostly intact. I would repeat the statement made last year, "assuming that the whole steel main is in similar condition, we may expect about ten or fifteen years more service from this pipe. Before this time a new main should be laid from the 48-inch cast iron main at Beaver Dam to High Hill Reservoir to be ready for use when the steel main gives out."

The report of Mr. William R. Conard, who made an examination of the pipe is herewith presented:

"After the lapse of another year, I have again had opportunity to make some examination of the 48-inch steel force main; this time a section of about 80 ft. of pipe cut from the line immediately adjacent to the Pumping Station to make room for the cross connections at this point with the new 48-inch cast iron main.

"This allowed for the examination of approximately 1,000 square feet of surface both inner and outer, at an important part of the line. The pitting on the interior is not as frequent as at the section examined last year, at Middleboro Road and Beaver Dam, but for pits of similar area the depth of the pits were found mostly greater, running from $1/16$ " to $3/16$ " in depth with an average of $1/10$ " to $1/8$ " and mostly of about $1/2$ " to $3/4$ " diameter.

"On two of the plates on the end of the section nearest to where it connected with the cast iron mains coming from the pumps the corrosion was considerable over about $1/3$ the area of the plates, but did not go to any great depth, averaging around $1/16$ ".

It is to be noted that at this end of the line there is a considerable deposit of silt and corroded material, fresh water sponges and water blisters apparently composed most of silt and iron oxide, but it was curious to note that under but few

of these water blisters was there evidence of corrosion, and practically no pitting. This deposit apparently extends up the line for some distance, and probably induces considerable loss of head, but how much could only be determined by careful tests. Just as with the tuberculating further up the line it appears unwise to disturb this deposit at this time, as to do so would probably accelerate the corrosion and bring about a worse condition than now prevails. Some attempt was made to take some putty and plaster impressions of the pittings and corroded spots, but these were not particularly successful, though they are submitted for your examination as illustrating the character of the deterioration of the inside of the pipe.

The outside of the pipe here appears in the same excellent condition, as reported last year, and I can but repeat that it is not the outside of the pipe, but the inside that needs to be watched for trouble except this:

"Where the line crosses what is known as Bolton Cedar Swamp where the soil has probably a high acid content, it is possible that some of the acids will have acted adversely on the outside, and I believe that it might be well worth your while to have the outside exposed in places along this section to see whether there is evidence of corroding influences. If this is done it might be well also to look at the interior, though not for any great distance.

"The conditions as noted of the interior of the pipe showing pittings from 40 to as high as 50 per cent. of the thickness of the pipe prompts me to say the same as last year, the line is probably good for several years to come before the upkeep cost is likely to be cause for concern, but sight must not be lost of the fact that another year has elapsed, and that with a force no larger than the one that has just finished the $3\frac{1}{2}$ miles of cast iron main, it would take at least three seasons' work to continue this line from

Beaver Dam to High Hill Reservoir, and that more or less time would be necessary to get the necessary authority and arrange the financing and it would seem the part of wisdom to place upon your program for the comparatively near future the taking of the steps to carry through the installation of this line, thereby putting your system in such shape so that you can turn the steel pipe from its service as the main force line to an auxiliary line. There is also another phase of the matter to consider: namely, that I believe that it is within the range of possibility to, by carefully going over the interior of the steel line and cleaning it thoroughly and putting on a protective coating, which should be made a matter of some careful studies, that the line can be placed in such shape that it would not be necessary to give thought to its replacement for a long period of time, and that the expense of doing this would be fully justified, as it should be but a fraction of replacement cost. The time to do this, if it is to be done, should be within a few years rather than to wait until the line begins to be an expense for keeping it up."

HIGH HILL RESERVOIR.

This reservoir has remained in good condition and no repairs have been found necessary. The usual crop of hay was cut from the banks and surrounding grounds.

ACUSHNET SYSTEM.

All parts of the old system have been kept in good condition and it is ready for use should occasion require. Minor repairs have been made to the dwelling house at "Ansel White Dam." The Mt. Pleasant Reservoir has been emptied, cleaned and refilled. The fences around this reservoir and the Purchase St. Pumping Station are, as reported last year, beyond ordinary repairs and should be renewed.

DISTRIBUTING SYSTEM.

The calls for extension of the distributing system to keep pace with the growth of the city have been unusually large. Thirty-eight thousand and seventy-eight feet of main pipe and 759 services have been laid. The main pipe extensions were mostly in response to petitions; although some were laid under streets to be resurfaced in order to avoid disturbing the new surface.

Two unusually large breaks in main pipes have occurred. On June 12th, the 10-inch main in Water St. near the south side of North St., burst, due to electrolysis. A piece about 18" long and 6" wide in the widest part blew out. A section of pipe about 4 ft. long was found to be badly pitted and showed the usual signs of electrolysis action. An electrolytic survey of the main was made and while there was no evidence of serious leakage of current, proper steps were taken by the Union Street Railway Co. to eliminate the slight defects that were found. Frequent electrolytic surveys will be made hereafter in an effort to forestall similar trouble.

On Sept. 17th, a 36"x16" tapping sleeve, which was installed in 1920, split its entire length, opening up about two inches. The cause is difficult to determine. The joint was made by pouring the space between the sleeve and pipe solid full of leadite. It is a question whether the break was caused by the expansion of so large a body of leadite or by defective metal in the casting. Experiments are being made which may throw more light on the subject. A great many hydrants have been broken off by automobiles. This is becoming a more and more serious problem, particularly when the hydrant is of the old non-compression type, involving a great loss of water as well as the necessity of shutting off the water in several blocks, while replacement is being made. The hydrants now being placed are of more rugged construction and of a design which does not waste so much water when broken. They are also more easily repaired.

There have been twenty-three leaks upon the mains the past year as herewith shown :

Date 1921	Size	Location	Cause	Cost
Dec. 17	12"	East French Ave., south of Butler	Joint started	\$ 8.81
19	24"	Purchase St., 300 ft. north of Coggeshall	Pipe cracked	294.91

Thirty-eight thousand, one hundred ninety-six feet of main pipe have been laid during the year and one thousand, three hundred, thirty-five feet of pipe previously laid have been removed. The total length in use is 192,697.5 miles.

Ninety-eight feet of small sized distribution pipe (less than 4-inch) have been laid, and one hundred, fifty-five feet of pipe previously laid have been removed. The total length now in use is 7601 feet.

Eighty-eight new stop gates have been set and four of those previously set have been removed. The total number now in use is 2629.

Nine small sized gates have been removed. The total number now in use is 99.

Four new waste gates have been set. The total number now in use is 197.

Twenty new stop gates for private supplies have been set and one of those previously set has been removed. The total number now in use is 448.

Six new air taps have been set. The total number now in use is 202.

One new check valve has been set. The total number now in use is four.

Seventy-eight new hydrants have been set and thirty-nine of those previously set have been removed. The total number now in use is 1,689.

Four watering cart hydrants have been removed. The total number now in use is 57.

Seven hundred, fifty-nine service pipes have been laid and eleven of those previously laid have been removed. The total number now in use is 17,102.

One hundred, fifty-seven taps have been cleaned as follows: Rust, 137; trouble inside, 20.

The total number of meters set in 1922.....	597
Number removed.....	62
Number to be added.....	535
Number in use Dec. 1, 1921.....	15,659

1922	*135,775	*135,075	*18,040	*3,939,120,548	*10,792,111	*71	*80	*598	16,194

*Includes populaton supplied in towns of Dartmouth and Acushnet: 938 taps, 4775 consumers.

The consumption for the year may be divided as follows:

	Gallons	Daily Average	Per capita	% of Total
Domestic consumption (metered)	1,439,005,239	3,942,481	29	37
Manufacturing consumption (metered)	1,590,003,275	4,356,173	32	40
All unmetered use, leaks and unaccounted for water,	910,112,034	2,493,457	18	23
Totals	3,939,120,548	10,792,111	79	100

It will be seen that the consumption is steadily increasing; the average daily for 1922 being over a million gallons above 1921, and over a half million gallons greater than 1920, which was the largest previous year.

The average daily consumption for November, 1922, was 12,318,695 gallons. As previously stated, this means that we must be increasing our pumping capacity to care for this consumption economically.

Respectfully-submitted,

STEPHEN H. TAYLOR,

Superintendent.

TABLE A.

STATEMENT OF WORK DONE BY LEAVITT ENGINE A FOR YEAR ENDING DEC. 1, 1922.

Diameter Steam Cylinder 16% and 36 1/4 in.
 Diameter Pump Plungers, 13 7/10 and 19% in.
 Stroke of piston and pump plungers, 90 inches.

Average working steam pressure 185 lbs.
 Average static head 166.26 ft.

Months	Number of days or parts	Total pumping time		Total number of strokes per month	Average number of strokes per minute	Total fuel used for all purposes		Total number of gallons pumped per month, allowance being made for ship.	Number of gallons pumped per pound of coal for total coal.	Number of gallons raised 100 ft. per lb. coal for total coal	Average dynamic head against pump in ft. no allowance for friction in suction	Average duty in pounds raised one foot high per 100 lbs. of coal, calculated on total fuel used for all purposes. No deductions.

Diameter Steam Cylinder 16% and 36% in.	Average working steam pressure 185 lbs.
Diameter Pump Plungers, 13 7-10 and 19% in.	Average static head 166.5 ft.
Stroke of piston and pump plungers, 90 inches.	

The duty is based on total fuel used for all purposes. This includes banking fires, starting, heating building, running shop engine during day and electric light engine at night. No deduction for ashes, moisture in coal or anything else.

TABLE C.

STATEMENT OF WORK DONE BY ELECTRICALLY OPERATED
DE LAVAL CENTIFRUGAL PUMP C FOR THE YEAR ENDING
DECEMBER 1, 1922.

Number of revolutions per minute, 1700 to 1800
Capacity when pumping alone 24 hours, $6\frac{1}{4}$ million gallons
Capacity when pumping with one Leavitt engine, 6 million gallons
24 hours,
With Little Quittacas at elevation 50, Static head, 168.33
Average dynamic head for year, 181.42

Months	Number of days or parts of days pumping	Total pumping time per month	Current used per month K. W. H.	Number of gallons pumped per month	Number of gallons pumped per K. W. H.
		H. M.			
December, 1921	7	57—10	13,000	14,410,000	1,108
January, 1922	6	74—30	16,900	19,010,000	1,124
March, 1922	1	8—00	1,800	2,005,000	1,113

Galvanized iron pipe 3 inch....	1	25.	
Galvanized iron pipe 2 inch....		38.	
Totals	759	11419.5	16928

One 2 inch cast iron service has been removed and replaced with 4 inch cast iron pipe.

One 1 inch heavy lead service has been removed and replaced with 2 inch cast iron pipe.

One $\frac{3}{4}$ inch iron service has been removed and replaced with $\frac{3}{4}$ inch light lead.

One $\frac{5}{8}$ inch light lead service has been removed and replaced with 1 inch light lead.

One $\frac{5}{8}$ inch iron service has been removed and replaced with $\frac{5}{8}$ inch heavy lead.

One $\frac{5}{8}$ inch iron service has been removed and replaced with $\frac{5}{8}$ inch light lead.

One $\frac{5}{8}$ inch light lead service has been removed and replaced with $\frac{5}{8}$ inch light lead.

Twelve connections to services previously laid have been made by taker.

Three connections to services previously laid have been made by the City, using 8 ft. 1 inch light lead, 15 ft. $\frac{5}{8}$ inch heavy lead, and 85 ft. $\frac{5}{8}$ inch light lead.

Thirty-eight extensions to services previously laid have been made by City, using 88 ft. $\frac{3}{4}$ inch heavy lead, 120 ft. $\frac{3}{4}$ inch light lead, 192 $\frac{1}{2}$ ft. $\frac{5}{8}$ inch heavy lead, 308 ft. $\frac{5}{8}$ inch light lead, 16 ft. $\frac{1}{2}$ inch heavy lead.

Four 2 inch galvanized iron services, one $\frac{3}{4}$ inch light lead, five $\frac{5}{8}$ inch heavy lead and one $\frac{1}{2}$ inch heavy lead services have been removed.

Length of service pipe laid during the year.....29180 ft.

Number of services laid 1922.....759

Number removed.....11

Number to be added.....748

Number in use December 1, 1921.....16354

Number in use December 1, 1922.....17102

SUMMARY OF STATISTICS.

FOR THE YEAR ENDING 1922.

IN FORM RECOMMENDED BY THE NEW ENGLAND
WATER WORKS ASSOCIATION.

NEW BEDFORD WATER WORKS.

NEW BEDFORD,
BRISTOL COUNTY, MASS.

GENERAL STATISTICS.

Population by census of 1920, 121,217.

Date of construction, 1866 to 1869, inclusive. Further supply 1895 to 1901, inclusive.

By whom owned, City of New Bedford.

Source of supply.—Water was first introduced on Nov. 26, 1869. From that date until July 10, 1899, the supply was taken from a storing reservoir artificially formed by constructing a dam across the valley of the Acushnet River, seven miles north of the centre of the City. This supply was augmented by a connection made in 1886 with Little Quittacas Pond.

Since July 10, 1899, the whole supply has been taken from Great and Little Quittacas Ponds, eleven miles north of the centre of the city.

Mode of supply.—Previous to July 10, 1899, the water flowed by gravity from the Acushnet Storing Reservoir (grade 40' + high water New Bedford Harbor) through a brick conduit 3 feet wide, 4 feet high, 5 6-10 miles long to a receiving reservoir (capacity 3 million gallons; grade 30') located opposite the Purchase Street Pumping Station. Thence it was pumped into the Mt. Pleasant Distributing Reservoir (capacity 15 million gallons; grade 154') located 1,879 feet distant, from whence it flowed by gravity into the city's distributing system.

Since July 10, 1899, the entire supply has been pumped from Little Quittacas Pond (grade 52' through a 48-inch steel force main $8\frac{1}{4}$ miles long) to a distributing reservoir (capacity 67 million gallons; grade 216') located upon High Hill, in the town of Dartmouth. From this reservoir it flows into the city's distributing system by gravitation through two 36-inch cast iron pipes averaging 4 1-17 miles in length.

The first named system is not now in use, but is held in reserve to meet any emergency which might occur.

PUMPING STATISTICS

1. Builders of Pumping Machinery.
Purchase Street Station:
 - a. McAlpine engine.
built by Quintard Iron Works. Cap. 5,000,000 gals. per 24 hrs.
 - b. High duty engine,
built by Henry R. Worington, Cap. 5,000,000 gals. per 24 hrs.
Little Quittacas Station:
 - a. b. Leavitt engines in duplicate, Capacity of the two engines
built by Dickson Mfg. Co. 20,000,000 gallons per 24 hrs.
 - c. DeLaval electrically oper- Capacity about 6,000,000 gals.,
ated centrifugal pump, di- delivered into High Hill Res-
rectly connected with a ervoir in 24 hours.
General Electric squirrel
cage, type I, Form K, 3
phase, 60 cycle, 550 volt,
250 H. P., induction A. C.
motor, operating at about
1800 revolutions per minute,
built by DeLaval Steam
Turbine Co. Current pur-
chased of New Bedford Gas
and Edison Light Co.

LITTLE QUITTACAS STATION—Engines A and B.

2. Description of fuel used.
 - a. Kind—bituminous.
 - b. Brand of coal—Pocahontas.
 - c. Price of coal per gross ton—delivered Little Quittacas
Station \$8.38.
 - d. Percentage of ash—7.
 - e. Wood, price per cord—none used.
3. Coal consumed for the year—4,439,780 lbs.
4. (Pounds of wood consumed) ÷ 3—equivalent amount of coal
—none used.
5. Total equivalent coal consumed, for the year=(3)+(4)
4,439,780 lbs.
6. Total pumpage for the year—3,882,309,890 gallons, with al-
lowance for slip.
7. Average static head against which pumps work—166.28 feet.
8. Average dynamic head against which pumps work—183.09
feet.
- 9a. Number of gallons pumped per pound of equivalent coal (5)
818.
- 9b. Number of gallons raised 100 feet per pound of equivalent
coal (5) 1497.
- 10a. Duty = $\frac{\text{gals. pumped (6)} \times 8.34 \text{ (lb. x 100 x dynamic head (8))}}{\text{Total fuel consumed (5)}} = 124,992,516.$
- 10b. Cost per million gallons raised into High Hill Reservoir
(engine A and B only) \$12.76.

LITTLE QUITTACAS STATION—Engine C.

11. Total pumping time for the year, 999 2-3 hours.
12. Total current used for the year, 227,100 K. W. H.
13. Total pumpage for the year, 248,060,000 gallons.
14. Number of gallons pumped per K. W. H., 1092.
15. Number of K. W. H. required to raise one million gallons into High Hill Reservoir, 923:56.
Cost per K. W. H. varies in accordance with amount of consumed.
16. Average cost per K. W. H., \$.026.
17. Cost per million gallons raised into High Hill Reservoir, (Engine C only) \$24.01.
Total cost of pumping, figured on pumping station expenses, viz: \$52,252.79.
18. Per million gallons pumped—\$13.46.
19. Per million gallons raised one foot (dynamic)—7 cents.
Cost of pumping figured on total maintenance and interest on bonds, (see financial CC+DD) viz.: \$298,066.98.
20. Per million gallons pumped—\$76.78.
21. Per million gallons raised one foot (dynamic)—41 9-10 cents.

FINANCIAL STATISTICS.

RECEIPTS.		EXPENDITURES.	
<i>Balance brought forward, \$67,639.67</i>		<i>Water works maintenance:</i>	
(a) From ordinary (main- tenance) receipts,		AA. Operation, (management, and repairs, \$192,695.73	
(b) From extraordinary re- ceipts (bonds, etc.)	30,899.13	CC. Total maintenance,	\$192,695.73
		DD. Interest on bonds,	105,371.25
Total,	\$98,538.80		\$298,066.98
<i>From water rates</i>			
A. Fixture rates,			
B. Meter rates, \$362,108.43			
C. Total from consumers,	362,108.43	(CC + DD),	
D. For hydrants,		EE. Payment of bonds,	43,000.00
E. For fountains,		FF. Sinking Fund,	25,450.00
F. For street watering,		<i>Water works construction:</i>	
G. For public buildings, (included in meter rates)		GG. Extension of mains,	96,001.30
H. For miscellaneous uses,		HH. Extension of services,	29,397.91
I. General appropriations,		II. Extension of meters,	11,152.15
J. Total from municipal departments, (included above)		JJ. Special,	7,326.33
K. From tax levy,		KK. Total construction,	143,877.69
L. From bond issue,		LL. Unclassified expenses:	
M. From other sources:		Amt. diverted by auditor,	7.29
For building purposes,	1,824.69	MM. Balance:	
For meter rentals,	13,284.30	(aa) Ordinary,	
Balance deficit,	34,645.74	Total balance,	
N. Total,	\$510,401.96	N. Total,	\$510,401.96

Disposition of balance.....

O. Net cost of works to date.....	\$4,795,698.35
P. Bonded debt to date.....	2,359,000.00
Q. Value of sinking fund at date.....	1,339,847.90
R. Average rate of interest.....	4 $\frac{32}{100}$ + per cent.

STATISTICS OF CONSUMPTION OF WATER.

1. Estimated total population at date.....	135,775
2. Estimated population on lines of pipe.....	135,075
3. Estimated population supplied.....	135,075
4. Total consumption for the year.....	3,939,120,548
5. Passed through meters.....	2,928,472,500
6. Percentage of consumption metered.....	74 per cent.
7. Average daily consumption.....	10,792,111 gals.
8. Gallons per day to each inhabitant.....	79
9. Gallons per day to each consumer.....	80
10. Gallons per day to each tap.....	598
11. Cost of supply water, per million gallons figured on total maintenance (item CC).....	\$49.63
12. Total cost of supply water, per million gallons figured on total maintenance plus interest on bonds.....	\$76.78

Includes population supplied in the Towns of Dartmouth and Acushnet.

STATISTICS RELATING TO DISTRIBUTING SYSTEM.

MAINS.	SERVICES.
1. Kind of pipe, cast iron and steel.	16. Kind of pipe; lead, wrought iron and cast iron.
2. Sizes, from 4 in. to 48 inch.	17. Sizes, $\frac{1}{2}$ inch to 10 inch.
3. Extended 38,078 feet during the year.	18. Extended 29,180 feet.
4. Discontinued 1,335 feet during year.	19. Discontinued 630 feet.
5. Total now in use, $192 \frac{6975}{10000}$ miles.	20. Total now in use, 125,14759 miles.
6. Cost of repairs per mile, \$27.34.	21. Number of service taps added during year:
7. Number of leaks per mile .11937.	New Bedford..... 748
8. Length of pipes less than 4 inches diam., $1 \frac{4395}{10000}$ miles.	Dartmouth 156
9. Number of hydrants added during year (public and private), 39.	Acushnet 74

CITY ORDINANCES

In the Year One Thousand Nine Hundred and Twenty-Two

AN ORDINANCE**Further Regulating the Passage of Vehicles in the Streets.**

Be it ordained by the City Council of the City of New Bedford as follows:

Section 1. Sections 554 and 555 and 556 of the Revised Ordinances of 1916 are hereby repealed.

Section 2. "Parking" is hereby defined as leaving of vehicles attended or unattended in the streets or public places.

Section 3. No vehicle shall be allowed to stand within the intersection of any street, nor within 10 feet of any street corner, cross walk, fire hydrant, or pole designated as a stopping place for street cars; except in case of an emergency or when directed to do so by a police officer in uniform. No vehicle shall be allowed to stand on either side of the street within ten feet of either side of the entrance of any fire station.

No parking shall be allowed within 10 feet of either side of entrance or exit of a church during service, nor within 10 feet of either side of entrance or exit of a theatre or public assembly place during performances or entertainments.

Section 4. The Chief of Police, under the direction of the Mayor and City Council, as a matter of public safety, is herewith empowered to designate non-stop areas and to mark in a suitable manner such parts of the street as may be required for the safety of pedestrians or use of persons boarding or leaving electric street cars. No vehicle shall be permitted to stand within a non-stop area.

Section 5. A vehicle shall not occupy a roadway so as to obstruct traffic. A vehicle shall not back to make a turn if doing so will obstruct traffic, but shall go to a place with clearway enough for the purpose.

Section 6. Parking areas are hereby designated as follows:—

1. The Municipal Lot, bounded by Pleasant, Elm, North Sixth Streets and Mechanics Lane.

2. Pleasant Street, west side, from William to Elm Streets. (This space to be used exclusively for licensed hackneys; under the direction of the Chief of Police.)

Section 7. No person shall stop a vehicle in any of the following described portions of the streets between 9 A. M. and 9 P. M., except while taking on or discharging passengers, merchandise or vehicular supplies:—

William Street, north side, between Pleasant Street and Acushnet Avenue:

Elm Street, south side, between Sixth and Purchase Streets;
Middle Street, south side, between Sixth and North Second
Streets;

Acushnet Avenue, west side, between Union and Middle Streets.

Section 8. No person shall stop a vehicle or allow a vehicle to stand within any of the following described portions of streets for more than two consecutive hours (amended,—“one hour”) between 9 o'clock A. M. and 6 o'clock P. M., Sundays and legal holidays excepted:

Sixth Street, between Union and Elm Streets;

Pleasant Street, between Spring and Middle Streets;

Purchase Street, between School and Kempton Streets;

Union Street, between Second and Seventh Streets;

William Street, between Second and Sixth Streets; (except as provided in preceding section);

Elm Street, between Second and Sixth Streets; (except as provided in preceding section);

Middle Street, between Second and Sixth Streets; (except as provided in preceding section);

High Street, between Pleasant and Purchase Streets;

Kempton Street, between Pleasant and Purchase Streets;

South Water Street, between Blackmer and Cove Streets.

Section 9. Proper signs to carry out the provisions of this ordinance shall be displayed on said streets as provided herein.

Section 10. This ordinance shall take effect upon its passage.

IN BOARD OF ALDERMEN,

Dec. 28, 1922.

Amended by striking out third line of Section 8 the words “two consecutive hours” and submitting therefor “One hour”.

Passed to be ordained as amended.

WALTER H. B. REMINGTON, Mayor.

Sent to Common Council,

RODOLPHUS A. SWAN, City Clerk.

IN COMMON COUNCIL,

Dec. 28, 1922.

Passed to be ordained,

GEORGE G. SYLVIA, President.

Passed to be ordained,

HAROLD WINSLOW, Clerk.

Presented to the Mayor for approval, Dec. 29, 1922.

RODOLPHUS A. SWAN, City Clerk.

Approved, Dec. 30, 1922.

WALTER H. B. REMINGTON, Mayor.

Attest:—

RODOLPHUS A. SWAN, City Clerk.

CITY ORDINANCES

**Creating a Planning Board for the City of New Bedford and
defining its duties.**

CITY OF NEW BEDFORD

In the Year One Thousand Nine Hundred and Twenty-Three

AN ORDINANCE

Be it ordained by the City Council of the City of New Bedford
as follows:

Section 1. The Planning Board for the City of New Bedford, hereby so designated, and appointed under the provisions of General Laws, Chapter 41, shall consist of five members. The terms of office of the members shall be arranged and designated at the time of appointment so that the term of one shall expire on the first Monday in February in the year 1924, one on the first Monday in February in the year 1925, one on the first Monday in February in the year 1926, one on the first Monday in February in the year 1927, and one on the first Monday in February in the year 1928. The first appointments shall be made within one month after the passage of this ordinance, and the subsequent annual appointments shall be made in January of each year for full terms of five years, to begin on the first Monday in February in the year of appointment. All vacancies in the Planning Board shall be filled in the manner prescribed by law for original appointments. All meetings of the City Council for confirmation of appointments of members of the Planning Board shall be held in convention.

Section 2. Any of the members of the Planning Board may be removed by the Mayor with the approval of a majority of the City Council, meeting in convention.

Section 3. The Planning Board shall choose a Chairman and a Clerk and may employ such assistance in the performance of its duties as may be approved in writing by the Mayor. No member of the Planning Board shall receive compensation from the city for duties performed as a member of the Board. The Board, with the approval of the Mayor and the City Council, shall fix the compensation of its employees, unless otherwise provided by ordinance.

Section 4. The Planning Board shall perform all the duties required under the laws of the Commonwealth and such other duties as may be required by ordinance.

Section 5. Annually, in January, the Planning Board shall present to the City Council a written report covering its doings of the preceding year; and shall make reports on subjects referred to it by the City Council.

CITY ORDINANCES

5 x

Section 6. On request, the several departments of the city government shall furnish the Planning Board with such data and information as may be required in carrying out the provisions of this ordinance.

Section 7. This ordinance shall take effect on its passage.

City Clerk.

CITY ORDINANCES

CITY OF NEW BEDFORD

Public Vehicle Fare Rates

CITY OF NEW BEDFORD

In the Year One Thousand Nine Hundred and Twenty-Three

AN ORDINANCE

Amending Sections styled "647, 648 and 639" Revised Ordinances of 1916, as amended, relating to Public Vehicles.

Be it ordained by the City Council of the City of New Bedford as follows:

Section 1. A section styled "Section 647" of the ordinance approved by the Mayor July 25, 1919, "Relating to Public Vehicles" is hereby amended by striking out said section and inserting in place thereof the following: Section 647, Fares for the conveyance of passengers in vehicles licensed under Class A shall be in accordance with the following rates:

Vehicles equipped with taximeters—For one passenger for the first one-third mile, 30 cents; for each additional one-third mile, 10 cents; for each additional passenger, 25 cents for the entire trip; children under 12 years of age, when accompanied by parent or guardian, free; waiting charge not to exceed 10 cents for each three minutes. These rates are for the entire city, day or night.

Vehicles equipped with speedometers—but without taximeters—For one passenger for the first mile or fraction thereof, 50 cents; for each additional mile or fraction thereof, 25 cents; for each additional passenger a charge not to exceed 25 cents for the entire trip; children under 12 years of age, when accompanied by parent or guardian, free; waiting charge not to exceed 10 cents for each three minutes. These rates are for the entire city, day or night.

Vehicles operating on a passenger rate—and not a taximeter or speedometer basis—From 6 A. M. to 9 P. M. for each adult passenger, 50 cents; from 9 P. M. to 6 A. M.—75 Cents; children between the ages of 4 and 12 years, half price; children under 4 years, when accompanied by parent or guardian, free. The above passenger rates prevail within the area bounded by Belleville road and a line extended westerly from this street to intersect a line drawn north and south through Rotch Street, on the north; by Rotch street and the line north and south, on the west; by Cove street, West French avenue, Cove road and Rockdale avenue on the south and by the Fairhaven boundary line on the east. Fares from any point within said portion to areas of the city beyond said limits shall not exceed twice the above rates.

Vehicles let by the hour—Any vehicle licensed under Class A, operating under any of the above systems of fare charges, may be let by the hour under the following schedule:

Five passenger vehicle—for shopping trips, \$2.00 per hour; for running around town, \$3.00 per hour.

Seven passenger vehicle—for shopping trips, \$2.50 per hour; for running around town, \$3.50 per hour.

Seven passenger limousine—for shopping trips, \$3.00 per hour; for running around town, \$3.50 per hour.

These rates shall be the same whether there is one passenger or more.

For all fares specified in this ordinance, each passenger may carry a hat box, grip sack, portmanteau or other similar article; for one trunk accompanying passenger, 15 cents.

The city clerk shall supply rate cards which show plainly the fares which may be charged for the transportation of passengers, which cards shall be displayed and so placed in licensed vehicles that they can be seen and may be read by the passengers.

Each owner of a licensed vehicle shall in his application, or at the time of taking a license, state under what method and system of fare charges he proposes to operate, and no change to another system shall be permitted or allowed without notice of the proposed change at the office of the city clerk, surrender of the rate card which then applies, and receipt of a new card in accordance with the desire of the applicant. The charge by the city clerk for this change over shall be 45 cents.

Section 2. A section styled "Section 648" of an ordinance approved May 8, 1919, relating to "Public Vehicles" hereby is amended by striking out the following paragraph:

Commencing at the river at the continuation of the east terminal of Belleville road thence running due west until said line intersects a line drawn north and south through Rotch avenue, thence running due south until said last named line intersects a line drawn east and west through Cove street, thence easterly by Cove street to the river, and thence northerly by the river to the place of beginning. Fares from any place within said portion of the city to points beyond said limits shall not exceed twice the above rates.

Section 3. A section styled "Section 639" of an ordinance approved May 8, 1919 is hereby amended by striking out the first paragraph of said section, which paragraph is as follows: "No vehicle licensed under Class A shall solicit or receive passengers on the street except at the definite places named in the license, or such places as persons desiring service designate when engaging the same."

Section 4. This ordinance shall take effect upon its passage.

CITY ORDINANCES

Charges by Water Board

CITY OF NEW BEDFORD

In the Year One Thousand Nine Hundred and Twenty-three
AN ORDINANCE

Amending Sections 95 and 96 of the Revised Ordinances of 1916,
relative to the Water Board.

Be it ordained by the City Council of the City of New Bedford
as follows:

Section 1. Section 95 of the Revised Ordinances of 1916 is
hereby amended by inserting the following sentence at the end
of the second paragraph thereof, viz.:— "The city will furnish
service supply connections from the street mains through the
cellar wall at such charge as may be fixed by the water board."

Section 2. Clause 11 of the regulations set out in Section 95
of said revised ordinances is hereby amended by striking out the
first paragraph therein and inserting in the place thereof the words
"the annual rental charge for meters supplied by city and installed
within the basement walls of houses shall be fixed by the Water
Board."

Section 3. Section 96 of said revised ordinances is hereby
amended by striking out the same and inserting in the place
thereof a new section to read as follows, viz.:— "When a water
bill remains unpaid for fifteen days after the same is due, the
Water Registrar shall issue a written demand for which ten per
cent of bill due shall be charged. In all cases of non-payment of
the water bill for thirty days after the same is due the Water
Registrar shall cause the supply of water to be shut off, and the
water shall not be again let on to the property for any owner,
except on the payment of the total amount due plus the sum of
two dollars."

Section 4. This ordinance shall take effect upon its passage.

CITY ORDINANCES

Relative to Water Board

CITY OF NEW BEDFORD

In the Year One Thousand Nine Hundred and Twenty-three
AN ORDINANCE

Repealing Section 1 of an ordinance approved by the Mayor May 11, 1923 and amending Section 95 of the Revised Ordinances of 1916 relative to the Water Board.

Be it ordained by the City Council of the City of New Bedford as follows:

Section 1. Section 1 of an ordinance passed by the City Council May 10, 1923 and approved by the Mayor May 11, 1923, which reads as follows is hereby repealed:—"Section 1. Section 95 of the Revised Ordinances of 1916 is hereby amended by inserting the following sentence at the end of the second paragraph thereof, viz.:—"The city will furnish service supply connections from street mains through the cellar wall at such charge as may be fixed by the Water Board."

Section 2. Section 95 of the Revised Ordinances of 1916 is hereby amended by striking out the second paragraph of section numbered "2" of "Regulations" contained in said section 95 as follows:—

"The city will furnish service supply connections from street mains through the cellar wall, at a charge of two dollars for the portion within street limits, and the entire cost upon the premises of the applicant. This applies to services one inch or less in size and allows one service pipe only for each ordinary building. For secondarily services or for services larger than one inch in size, the entire cost of installation from the street main through the cellar wall will be charged to the applicant," and by inserting in place thereof the following, viz.:—

"The city will furnish service supply connections from the street mains through the cellar wall at such charge as may be fixed by the Water Board," so that said paragraph will read as follows:

2. All applications for service supplies must be made by the owner of the property at the office of the registrar in the form prescribed, stating the various uses to which the water is to be applied.

The city will furnish service supply connections from the street mains through the cellar wall at such charge as may be fixed by the Water Board.

Section 3. This ordinance shall take effect upon its passage.

CITY ORDINANCES

Fire Department

CITY OF NEW BEDFORD

In the Year One Thousand Nine Hundred and Twenty-Three
AN ORDINANCE

Repealing Section 382 of Revised Ordinances of 1916, as amended by an ordinance approved by the Mayor, May 13, 1920; and providing for a new and different method of control by the fire department.

Be it ordained by the City Council of the City of New Bedford as follows:

Section 1. Section 382 of the Revised Ordinances of 1916, as amended by an ordinance approved by the Mayor, May 13, 1920, is hereby repealed.

Section 2. The Board of Engineers of the Fire Department, as the same heretofore has been constituted, organized and exercising management, is hereby abolished.

The Mayor shall be the executive head and general directing authority in control and management of the Fire Department.

Pursuant to and under authority of Acts of General Court of 1923, Chapter 61, Section 1, the present Chief Engineer and the several assistant engineers hereby are appointed to positions and capacities in the permanently employed organized fire force of the city with the following titles, respectively, viz.:—Chief Engineer to be Chief of the Fire Department; the first assistant engineer to be Deputy Chief; the second assistant engineer to be First District Chief; the third assistant engineer to be Second District Chief; the fourth assistant engineer to be Third District Chief. Their several duties shall be the same as formerly assigned to them under the city ordinances in their respective positions as then named and described.

Vacancies in the office of District Chiefs shall be filled by appointment made by the Mayor and confirmed by the City Council in convention.

Section 3. This ordinance shall take effect upon its passage.

CITY ORDINANCES

Garbage Collection

CITY OF NEW BEDFORD

In the Year One Thousand Nine Hundred and Twenty-Three

AN ORDINANCE

Relative to the duties of the Superintendent of Streets and of the Board of Health with reference to collection of garbage.

Be it ordained by the City Council of the City of New Bedford as follows:

Section 1. Section 477 of the Revised Ordinances of 1916 as amended by an ordinance approved by the Mayor, January 3, 1922, is hereby further amended by striking out in the thirteenth line thereof the following words "and the collection of garbage"; so that the ordinance shall read as follows.—Section 477. The superintendent of streets, under the direction of the Mayor and Aldermen, and subject to the plans and specifications of the city engineer, shall have charge of all street construction and the construction and repairs of sewers; he shall keep the streets clean and in good condition of repair, properly watered and oiled; he shall have the care and management of all bridges which are used as highways and are in whole or in part under the charge of the city; he shall have charge of the city stable and all tools, appliances and apparatus used by the street department; he shall have charge of the collection and disposal of ashes and rubbish.

Section 2 Section 123 of the Revised Ordinances of 1916 is hereby amended by the addition of the following paragraph: "The board of health shall have charge of the collection and disposal of garbage, refuse and offal," so that said section shall read as follows.—Section 123. The board of health shall have full power to make all needful rules and regulations for public health and safety under the provisions of General Laws, Chapter, 111, and amendments thereto, and the rules and regulations herein established, except plumbing regulations, shall be subject to change and amendment by the board of health without action thereon by the city council, but nothing herein contained shall be construed to prevent the board of health from making such further rules and regulations in regard to plumbing as are not inconsistent herewith. The board of health shall have charge of the collection and disposal of garbage, refuse and offal.

Section 3. Section 596 of the Revised Ordinances of 1916 is amended by striking out in the first and second lines thereof the words "and garbage" and inserting between the words "ashes" and "rubbish" the word "and", so that said section shall read as follows:—Section 596. Collection of ashes and rubbish shall be made by districts on days designated by the superintendent of streets. Owners and occupants of buildings shall cause their ashes and rubbish to be placed on the outer edge of the sidewalk beside their premises, or such other places as may be required by the superintendent of streets, before 7 o'clock in the morning of the day designated by said superintendent for collection.

Section 4. This ordinance shall take effect upon its passage.
